0.3	Mar. 28. 2013	7	Update LED electrical spec
		19	Update color Coordinates spec

1. General description

LM190E0A-SLA1 is a Color Active Matrix Liquid Crystal Display with a Light Emitting Diode (LED) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. It has a 19.0 inch diagonally measured active display area with SXGA resolution (1024 vertical by 1280 horizontal pixel array) Each pixel is divided into Red, Green and Blue subpixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,7M colors with Advanced-FRC(Frame Rate Control). It has been designed to apply the interface method that enables low power, high speed, low EMI. FPD Link or compatible must be used as a LVDS(Low Voltage Differential Signaling) chip. It is intended to support applications where thin thickness, wide viewing angle, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the subpixels, the LM190E0A-SLA1 characteristics provide an excellent flat panel display for office automation products such as monitors.

General features

deliciai icatares	
Active screen size	19.0 inches (479.96mm) diagonal
Outline Dimension	396.0(H) x 324.0(V) x 9.9(D) mm(Typ.)
Pixel Pitch	0.0976*RGB(H)mm x 0.2928(V)mm
Pixel Format	1280 horizontal By 1024 vertical Pixels. RGB stripe arrangement
Interface	LVDS 2Port
Color depth	16.7M colors
Luminance, white	250 cd/m² (Center 1Point, typ)
Viewing Angle (CR>10)	R/L 178(Typ.), U/D 178(Typ.)
Power Consumption	Target total 11.45 W(Typ.), (2.25 W@VLCD , 9.2W_w/o driver)
Weight	1705g(typ.)
Display operating mode	Transmissive mode, normally Black
Surface treatments	Hard coating (3H), Anti-glare treatment of the front polarizer

2. Absolute maximum ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. Absolute maximum ratings

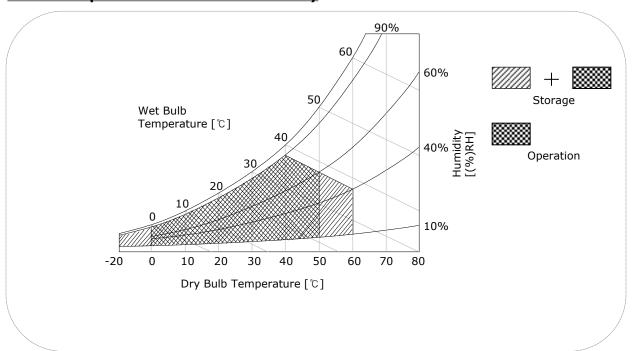

Darameter	Cymbol	Val	ues	Units	Notos	
Parameter	Symbol	Min	Max	UTILS	Notes	
Power Supply Input Voltage	V _{LCD}	-0.3	+6.0	Vdc	At 25℃	
Operating Temperature	T _{OP}	0	50	°C		
Storage Temperature	T _{ST}	-20	60	°C	1 2 2	
Operating Ambient Humidity	H _{OP}	10	90	%RH	1,2,3	
Storage Humidity	H _{ST}	10	90	%RH		
LCM Surface Temperature (Operation)	T _{Surface}	0	65	°C	1, 4	

Note: 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39 °C Max, and no condensation of water.

- 2. Maximum Storage Humidity is up to $40\,^{\circ}$, 90% RH only for 4 corner light leakage Mura.
- 3. Storage condition is guaranteed under packing condition
- 4. LCM Surface Temperature should be Min. 0° and Max. 65° under the VLCD=5.0V, fV=60Hz, 25° ambient Temp. no humidity control and LED string current is typical value.

FIG. 2 Temperature and relative humidity

3. Electrical specifications

3-1. Electrical characteristics

It requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the LED/Backlight, is typically generated by an LED Driver. The LED driver is an external unit to the LCDs.

Table 2. Electrical characteristics

Parameter	Symbol	Values			Unit	Notes
rarameter	Эуппоп	Min	Тур	Max	Offic	Notes
MODULE:						
Power Supply Input Voltage	V_{LCD}	4.5	5.0	5.5	Vdc	
Permissive Input Voltage Ripple	V_{RF}	-	-	0.2	V	3
Dower Supply Input Current	I _{LCD-MOSAIC}	-	450	563	mA	1
Power Supply Input Current	$I_{LCD ext{-}GREEN}$	-	600	750	mA	2
Power Consumption	P_{LCD}	-	2.25	2.81	Watt	1
Inrush current	I_{RUSH}	-	-	3.0	А	4

Note:

- 1. The specified current and power consumption are under the $V_{LCD}=5.0V$, $25 \pm 2^{\circ}C$, $f_{V}=60Hz$ condition whereas mosaic pattern(8 x 6) is displayed and f_{V} is the frame frequency.
- 2. The current is specified at the maximum current pattern.
- 3. Permissive power ripple should be measured under V_{LCD}=5.0V, maximum frame rate (fV) at 25°C. Additionally, we recommend the bandwidth configuration of oscilloscope is to be under 20MHz.
- 4. The duration of rush current is about 5ms and rising time of power Input is 500us \pm 20%.

FIG.3 pattern for Electrical characteristics

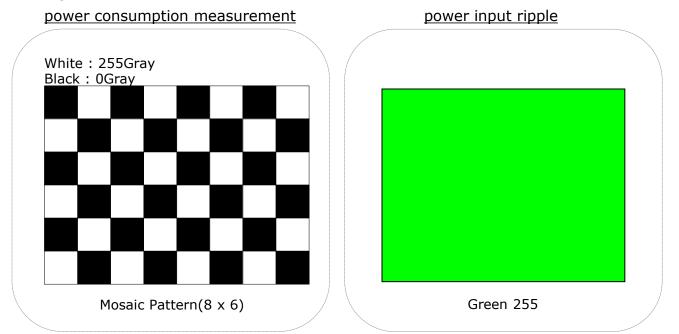

Table 3. LED array ELECTRICAL CHARACTERISTICS

Darameter	Cumbal	Condition		Linit	Note		
Parameter	Symbol Condition		Min.	Тур.	Max.	Unit	S
LED String Current	Is		-	100	105	mA	1,2,5
LED String Voltage	Vs		42.8	45.8	48.8	V	1,5
Power Consumption	PBar			9.2	9.8	Watt	1,2,4
LED Life Time	LED_LT		30,000	-	-	Hrs	3

Notes) The LED Bar consists of 30 LED packages, 2 strings (parallel) x 15 packages (serial)

LED driver design guide

: The design of the LED driver must have specifications for the LED in LCD Assembly. The performance of the LED in LCM, for example life time or brightness, is extremely influenced by the characteristics of the LED driver.

So all the parameters of an LED driver should be carefully designed and output current should be Constant current control.

Please control feedback current of each string individually to compensate the current variation among the strings of LEDs.

When you design or order the LED driver, please make sure unwanted lighting caused by the mismatch of the LED and the LED driver (no lighting, flicker, etc) never occurs. When you confirm it, the LCD module should be operated in the same condition as installed in your instrument.

Notes:

- 1. The specified values are for a single LED bar.
- 2. The specified current is defined as the input current for a single LED string with 100% duty cycle.
- 3. The LED life time is defined as the time when brightness of LED packages become 50% or less than the initial value under the conditions at $Ta = 25 \pm 2^{\circ}C$ and LED string current is typical value.
- 4. The power consumption shown above does not include loss of external driver. The typical power consumption is calculated as $P_{Bar} = Vs(Typ.) \times Is(Typ.) \times No.$ of strings. The maximum power consumption is calculated as $P_{Bar} = Vs(Max.) \times Is(Typ.) \times No.$ of strings.
- 5. LED operating conditions must not exceed Max. ratings.

3-2. Interface connections

3-2-1. LCD Module

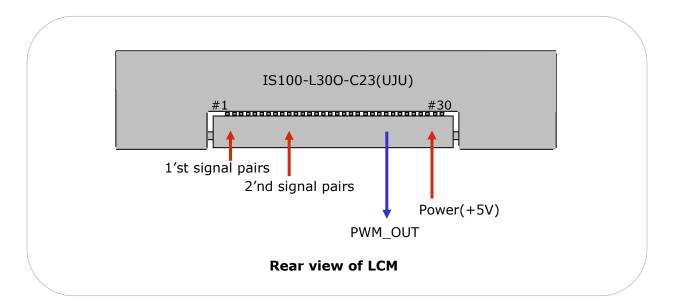

LCD connector(CN1): IS100-L30O-C23(UJU), GT103-30S-H15 (LSM) Mating connector: FI-X30H and FI-X30HL (JAE) or Equivalent

Table 4. Module connector(CN1) pin configuration

Pin No	Symbol	Description	
1	RXO0-	Minus signal of 1st channel 0 (LVDS)	
2	RXO0+	Plus signal of 1st channel 0 (LVDS)	
3	RXO1-	Minus signal of 1st channel 1 (LVDS)	
4	RXO1+	Plus signal of 1st channel 1 (LVDS)	
5	RXO2-	Minus signal of 1st channel 2 (LVDS)	
6	RXO2+	Plus signal of 1st channel 2 (LVDS)	First Pixel data
7	GND	Ground	I not i ixoi data
8	RXOC-	Minus signal of 1st clock channel (LVDS)	
9	RXOC+	Plus signal of 1st clock channel (LVDS)	
10	RXO3-	Minus signal of 1st channel 3 (LVDS)	
11	RXO3+	Plus signal of 1st channel 3 (LVDS)	
12	RXE0-	Minus signal of 2nd channel 0 (LVDS)	
13	RXE0+	Plus signal of 2nd channel 0 (LVDS)	
14	GND	Ground	
15	RXE1-	Minus signal of 2nd channel 1 (LVDS)	
16	RXE1+	Plus signal of 2nd channel 1 (LVDS)	
17	GND	Ground	Second Pixel data
18	RXE2-	Minus signal of 2nd channel 2 (LVDS)	Second Fixer data
19	RXE2+	Plus signal of 2nd channel 2 (LVDS)	
20	RXEC-	Minus signal of 2nd clock channel (LVDS)	
21	RXEC+	Plus signal of 2nd clock channel (LVDS)	
22	RXE3-	Minus signal of 2nd channel 3 (LVDS)	
23	RXE3+	Plus signal of 2nd channel 3 (LVDS)	
24	GND	Ground	
25	NC	No Connection (I2C Serial interface for LCM)	
26	NC	No Connection (I2C Serial interface for LCM)	
27	PWM_OUT	For Control Burst frequency of Inverter	
28	VLCD	Power Supply (5.0V)	
29	VLCD	Power Supply (5.0V)	
30	VLCD	Power Supply (5.0V)	

FIG. 4 Connector diagram

Note:

- 1. NC: No Connection.
- 2. All GND(ground) pins should be connected together and to Vss which should also be connected to the LCD's metal frame.
- 3. 3. All V_{LCD} (power input) pins should be connected together.
- 4. Input Level of LVDS signal is based on the IEA 664 Standard.
- 5. PWM_OUT is a reference signal for LED Driver control. This PWM signal is synchronized with vertical frequency. Its frequency is 6 times of vertical frequency, and its duty ratio is 50%. If the system don't use this pin, do not connect.

Ver. 0.3 Mar. 28, 2013 9 / 30

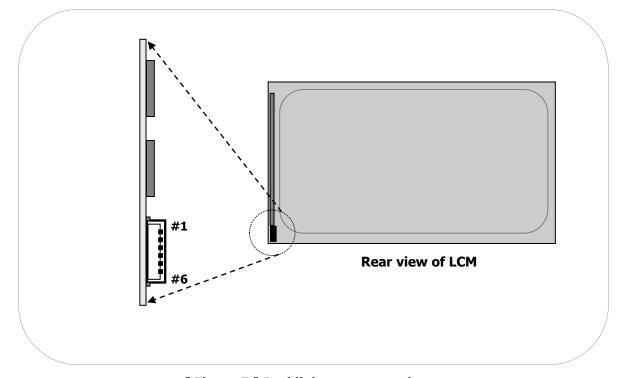

3-2-2. BACKLIGHT CONNECTOR PIN CONFIGURATION(CN3)

The LED interface connector is a model SM06B-SHJH(HF) wire-locking type manufactured by JST. The mating connector is a SHJP-06V-S(HF) or SHJP-06V-A-K(HF) and Equivalent. The pin configuration for the connector is shown in the table below.

Table 5. LED connector pin configuration

Pin	Symbol	Description	Notes
1	FB1	Channel1 Current Feedback	
2	NC	No connection	
3	VLED	LED Power Supply	
4	VLED	LED Power Supply	
5	NC	No connection	
6	FB2	Channel2 Current Feedback	

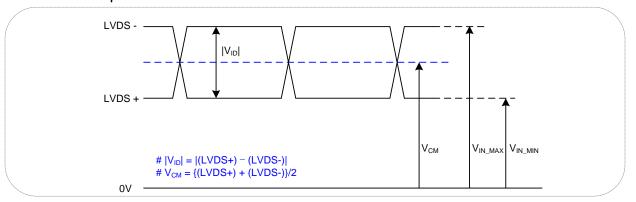

[Figure 5] Backlight connector view

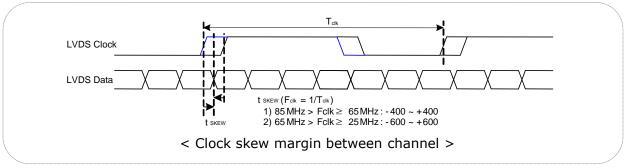

3-3. LVDS characteristics

3-3-1. DC Specification

Description	Symbol	Min	Max	Unit	Notes
LVDS Differential Voltage	V _{ID}	200	600	mV	-
LVDS Common mode Voltage	V _{CM}	0.6	1.8	V	-
LVDS Input Voltage Range	V _{IN}	0.3	2.1	V	-

3-3-2. AC Specification

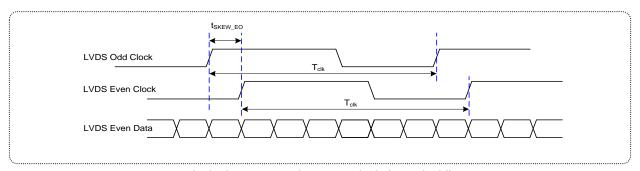

Description	Symbol	Min	Max	Unit	Notes
LVDS Clock to Data Skow Margin	t _{SKEW}	- 400	+ 400	ps	85MHz > Fclk ≥ 65MHz
LVDS Clock to Data Skew Margin	t _{SKEW}	- 600	+ 600	ps	65MHz > Fclk ≥ 25MHz
LVDS Clock to Clock Skew Margin (Even to Odd)	t _{SKEW_EO}	- 1/7	+ 1/7	T _{clk}	-
Maximum deviation of input clock frequency during SSC	F _{DEV}	-	± 3	%	-
Maximum modulation frequency of input clock during SSC	F _{MOD}	-	200	KHz	-

Note:

This SSC specification is based on T-CON operation. According to various system, the condition for optimum SSC can be varied. We recommend the SSC condition should be adjusted in order to prevent any kinds of failure symptoms.

< Clock skew margin between clock (Even/Odd) >

3-3-3. LVDS Data format

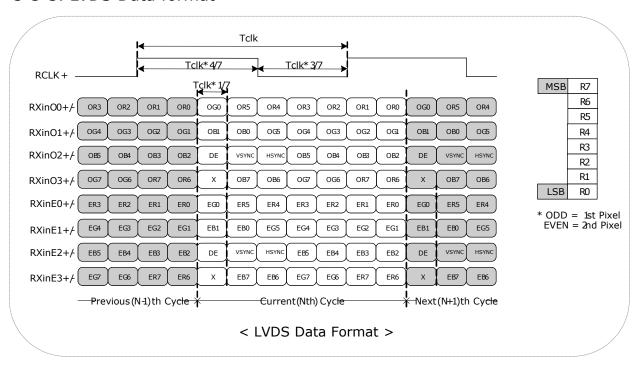

Table 6. Required signal assignment for Flat Link(NS:DS90CF383) transmitter

Pin #	Pin Name	Require Signal	Pin #	Pin Name	Require Signal
1	VCC	Power Supply for TTL Input	29	GND	Ground pin for TTL

19	D18	TTL Input (B1)	47	T _X OUT0+	Positive LVDS differential data output 0
20	D19	TTL Input (B2)	48	T _X OUT0 –	Negative LVDS differential data output 0
21	GND	Ground pin for TTL Input	49	LVDS GND	Ground pin for LVDS
22	D20	TTL Input (B3)	50	D27	TTL Input (R6)
23	D21	TTL Input (B4)	51	D0	TTL Input (R0)
24	D22	TTL Input (B5)	52	D1	TTL Input (R1)
25	D23	TTL Input (RSVD)	53	GND	Ground pin for TTL
26	VCC	Power Supply for TTL Input	54	D2	TTL Input (R2)
27	D24	TTL Input (HSYNC)	55	D3	TTL Input (R3)
28	D25	TTL Input (VSYNC)	56	D4	TTL Input (R4)

Notes: 1. Refer to LVDS Transmitter Data Sheet for detail descriptions.

2. 7 means MSB and 0 means LSB at R,G,B pixel data

3-4. Signal timing specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

Table 7. Timing table

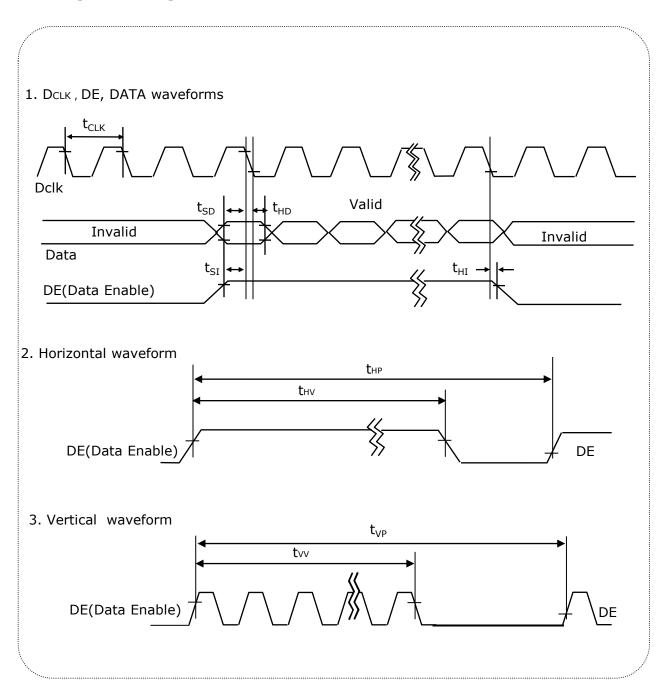

Par	ameter	Symbol	Min.	Тур.	Max.	Unit	Notes
_	Period	t _{CLK}	14.8	18.5	22.2	ns	Pixel frequency
D _{CLK}	Frequency	f _{CLK}	45.0	54.0	67.5	MHz	: Typ.108MHz
	Horizontal Valid	t _{HV}	640	640	640		
	H Period Total	t _{HP}	704	844	960	t _{CLK}	
	Horizontal Blank	t _{HB}	64	204	320		
Horizontal	ntal Hsync Frequency		53.3	64.0	80.0	kHz	
	Width	t _{wH}	16	56	80		
	Horizontal Back Porch	t _{HBP}	32	124	200	t _{CLK}	
	Horizontal Front Porch	t _{HFP}	16	24	40		
	Vertical Valid	t _{vv}	1024	1024	1024		
	V Period Total	t _{VP}	1032	1066	1536	t _{HP}	
	Vertical Blank	t _{VB}	8	42	512		
_	Vsync Frequency	f _V	50	60	75	Hz	
Vertical	Width	t _{vvv}	2	3	250		
	Vertical Back Porch	t _{VBP}	5	38	250	t _{HP}	
	Vertical Front Porch	t _{VFP}	1	1	12		

Note: Hsync period and Hsync width-active should be even number times of tclk. If the value is odd number times of tclk, display control signal can be asynchronous. In order to operate this LCM a Hsync, Vsyn, and DE(data enable) signals should be used.

- 1. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rates.
- 2. Vsync and Hsync should be keep the above specification.
- 3. Hsync Period, Hsync Width, and Horizontal Back Porch should be any times of character number(4).
- 4. The polarity of Hsync, Vsync is not restricted.
- 5. The Max frequency of 1280X1024 resolution is 67.5Mhz

3-5. Signal timing waveforms

3-6. Color input data reference

The brightness of each primary color (red,green and blue) is based on the 8bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Table 8. Color data reference

	bie 8. Color data	_	<u> </u>		_																				_

3-7. Power sequence

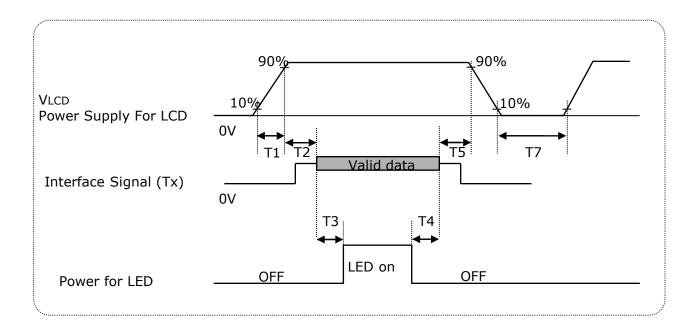

Table 9. Power sequence

Darameter		Values								
Parameter	Min	Тур	Max	Units						
T1	0.5	-	10	ms						
T2	0.01	-	50	ms						
Т3	500	-	-	ms						
T4	200	-	-	ms						
T5	0.01	-	50	ms						
T7	1	-	-	S						

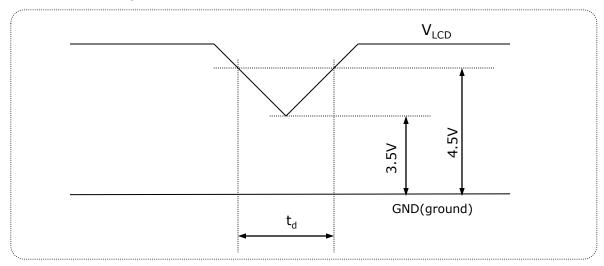

Notes:

- 1. Please V_{LCD} power on only after connecting interface cable to LCD.
- 2. Please avoid floating state of interface signal at invalid period.
- 3. When the interface signal is invalid, be sure to pull down the power supply for LCD V_{LCD} to 0V.
- 4. LED power must be turn on after power supply for LCD an interface signal are valid.

3-8. V_{LCD} Power dip condition

FIG. 6 Power dip condition

1) Dip condition

$$3.5V \le V_{LCD} < 4.5V$$
 , $t_d \le 20ms$

2)
$$V_{LCD}$$
< 3.5V

 $V_{\text{LCD}}\text{-dip}$ conditions should also follow the Power On/Off conditions for supply voltage.

Ver. 0.3 Mar. 28, 2013

4. Optical specification

Optical characteristics are determined after the unit has been 'ON' for 30 minutes in a dark environment at 25°C.

Table 10. Optical characteristics

The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0 °.

FIG. 7 presents additional information concerning the measurement equipment and method.

FIG. 7 Optical characteristic measurement equipment and method

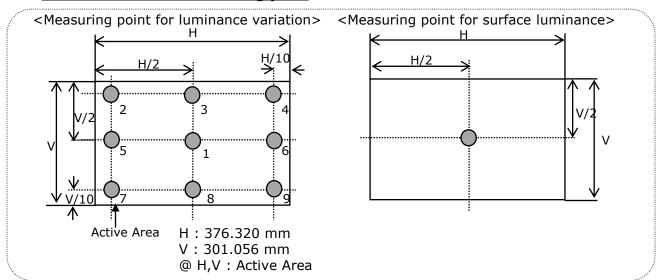

Notes:

Contrast ratio(CR) is defined mathematically as :It is measured at center point(1)

- 2. Surface luminance is the luminance value at center 1 point(1) across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 8.
- 3. The variation in surface luminance , δ $_{\text{WHITE}}$ is defined as

For more information see Figure 8.

FIG. 8 Luminance measuring point

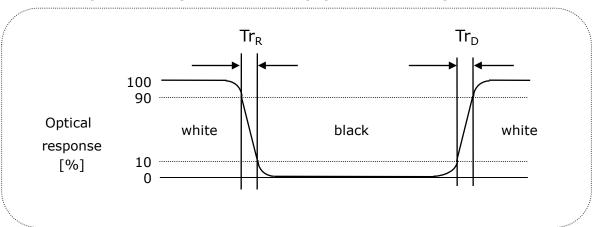

Notes:

4. Response time is the time required for the display to transition from black to white (Decay Time, Tr_D) and from white to black (Rise Time, Tr_R)

The sampling rate is 2,500 sample/sec. For additional information see FIG. 9.

The response time is defined as the following figure and shall be measured by switching the input signal for each gray to gray.

FIG. 9 Response time (measurement equipment : RD-80S)

The Gray to Gray response time is defined as the following figure and shall be measured by switching the input signal for "Gray To Gray".

- Grav step: 5 Step
- TGTG AVR is the total average time at rising time and falling time for "Gray To Gray".
- if system use ODC (Over Driving Circuit) function, Gray to Gary response time may be 5ms~8ms GtG
 - * it depends on Overshoot rate.

Table. 11 GTG Gray Table

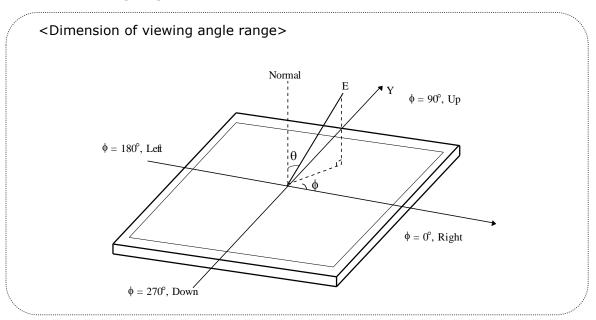

Crov to C	Gray to Gray		Rising Time									
Gray to G	гау	G255	G191	G127	G63	G0						
Falling Time	G255											
	G191											
	G127											
	G63											
	G0											

Notes:

5. Viewing angle is the angle at which the contrast ratio is greater than 10 or 5. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG. 10.

FIG. 10 Viewing angle

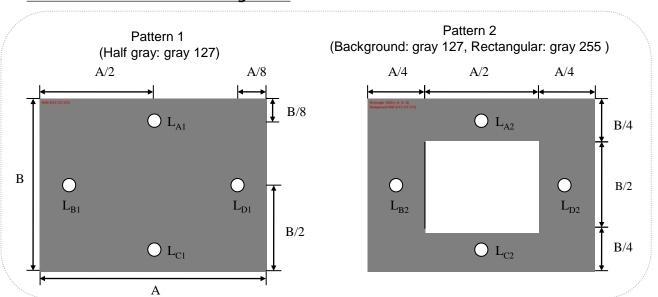

6. Crosstalk

The equation of crosstalk :
$$(|L_{A[or\ C]2}-L_{A[or\ C]1}|/L_{A[or\ C]1}) \times 100(\%)$$
 [Vertical], $(|L_{B[or\ D]2}-L_{B[or\ D]1}|/L_{B[or\ D]1}) \times 100(\%)$ [Horizontal]

For more information see Figure 11.

FIG. 11 Crosstalk Measuring Point

Ver. 0.3 Mar. 28, 2013 22 / 30

Notes:

7. Luminance Uniformity - angular - dependence (LR& TB)

TCO 5.0 Luminance uniformity – angular dependence, is the capacity of the VDU to present the same Luminance level independently of the viewing direction. The angular-dependent luminance uniformity is calculated as the ratio of maximum luminance to minimum luminance in the specified measurement areas.

- Test pattern $\,$: Full white 4° \times 4° square size, back ground shall be set to 80%

image loading, RGB 204, 204, 204

- Test luminance : \geq 150cd/ m°

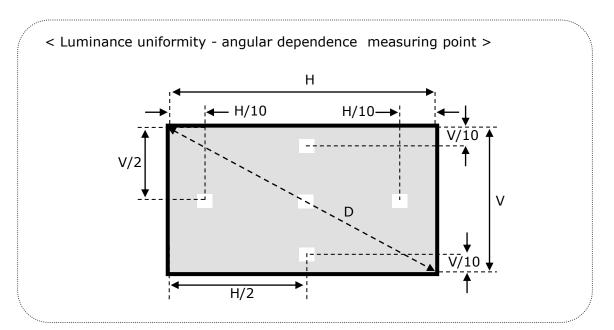

- Test point : 5-point

- Test distance : D * 1.5 = 72.0cm

- Test method : $L_{R} = ((L_{max.+30deg.} / L_{min. +30deg.}) + (L_{max. -30deg.} / L_{min. -30deg.})) / 2$

 $T_{B} = ((L_{\text{max.}+15\text{deg.}} / L_{\text{min.} +15\text{deg.}})$

FIG. 12 Luminance Uniformity angular dependence

Notes:

8. Color grayscale linearity , Δu'v' is defined as

$$\sqrt{(u'_A - u'_B)^2 + (v'_A - v'_B)^2}$$

Where indices A and B are the two gray levels found to have the largest color differences between them.

i.e. get the largest $\Delta u'$ and $\Delta v'$ of each 6pairs of u' and v' and calculate $\Delta u'v'$.

-Test pattern: 100% full white pattern with a test pattern as shown FIG.12

Squares of 40mm by 40mm in size, filled with 255, 225, 195, 165, 135 and 105

grayscale steps should be arranged in the center of the screen.

-Test method

First gray step: move a square of 255 gray level should be moved into the center of the screen

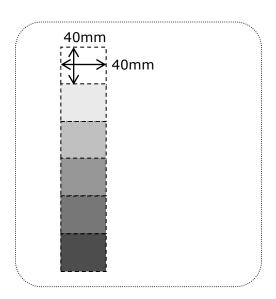

and measure luminance and u' and v' coordinates.

Next gray step: move a 255 gray square into the center and measure both luminance and

u' and v' coordinates.

The same procedure shall then be repeated for gray steps 195, 165, 135 and 105.

FIG. 13 Color grayscale linearity

Ver. 0.3 Mar. 28, 2013 24 / 31

Notes:

9. Colour uniformity Angular dependence (LR)

TCO 5.1 Color uniformity – angular dependence, is the capacity of the VDU to present the same Colour level independently of the viewing direction. The angular-dependent colour uniformity is calculated as the largest difference in $\triangle u'v'$ value

- Test pattern $\,$: Full white 4°× 4° square size, back ground shall be set to 80%

image loading, RGB 204, 204, 204

Test luminance : ≥200cd/m²
Test point : 3-point
Test distance : D * 1.5

- Test method

1. The screen shall then be rotated ± 30 degrees around a vertical axis through the screen centre-point and the chromaticity co-ordinates at positions P_L , P_R , $(u'_{PL/~\pm~30^\circ}, v'_{PL/~\pm~30^\circ}$ and $u'_{PR/~\pm~30^\circ}, v'_{PR/~\pm~30^\circ}$ respectively) shall be recorded.

2. $\triangle u^{\prime}v^{\prime}$ shall be calculated for each measured position using the formula

a.
$$\triangle u'v'_{+30^{\circ}} = ((u'_{PL/ + 30^{\circ}} - u'_{PR/ + 30^{\circ}})^2 + (v'_{PL/ + 30^{\circ}} - v'_{PR/ + 30^{\circ}})^2)^{1/2}$$

b.
$$\triangle u'v_{-300} = ((u'_{PL/-300} - u'_{PR/-300})^2 + (v'_{PL/-300} - v'_{PR/-300})^2)^{1/2}$$

3. The largest difference in \triangle u'v' value shall be reported

FIG. 14 Colour uniformity Angular dependence

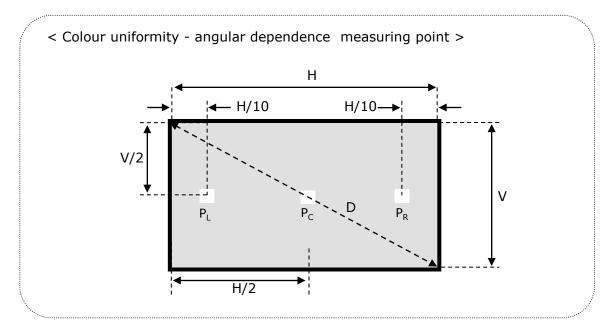

Table 12. Gray Scale Specification

Gray Level	Relative Luminance [%] (Typ.)
0	0.1
15	0.3
31	1.08
47	2.5
63	4.72
79	7.7
95	11.49
111	16.2
127	21.66
143	28.2
159	35.45
175	43.8
191	53.00
207	63.3
223	74.48
239	86.8
255	100

5. Mechanical characteristics

The contents provide general mechanical characteristics. In addition the figures in the next page are detailed mechanical drawing of the LCD.

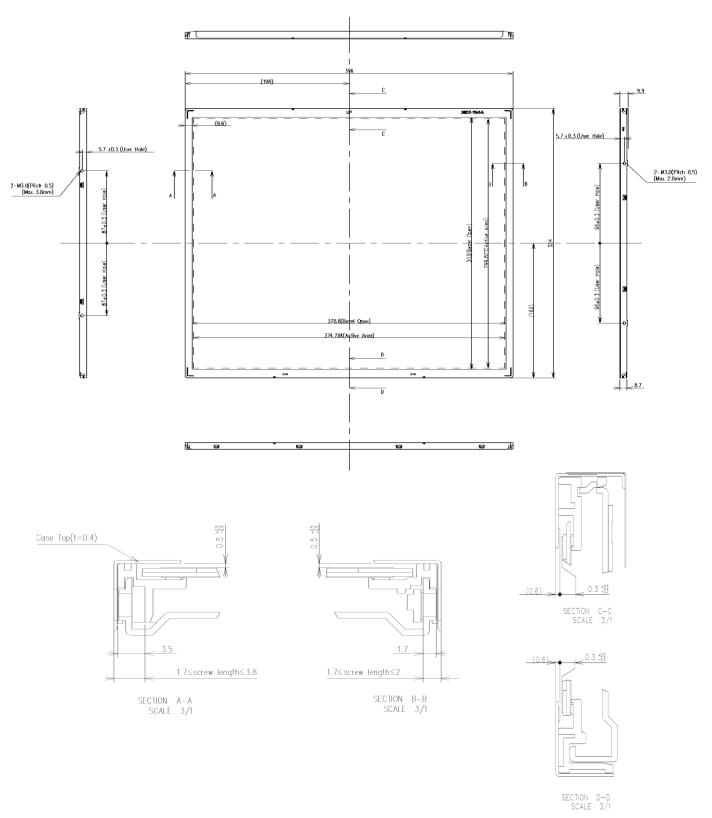

Table 13. Mechanical characteristics

	Horizontal	396.0 mm				
Outline dimension	Vertical	324.0 mm				
	Depth	9.9mm				
Bezel area	Horizontal	378.8 mm				
bezei area	Vertical	303.0 mm				
Active display area	Horizontal	374.784 mm				
Active display area	Vertical	299.827 mm				
Weight	1705g (Typ.) 1790g (Max)					
Surface treatment	Hard coating(3H) Anti-glare treatment of the front polarizer					

Notes: Please refer to a mechanic drawing in terms of tolerance at the next page.

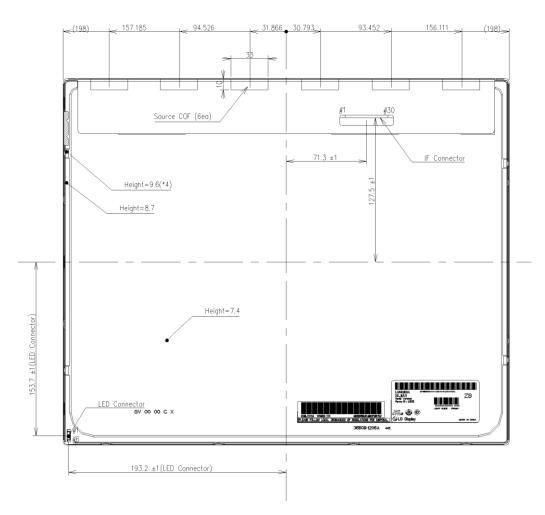

<FRONT VIEW>

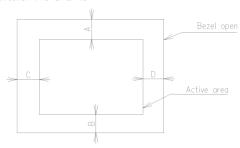

<REAR VIEW>

- 1. Backlight has 1 LED Array Ass'y
 2. 1/F Connector Specification: IS100-L300-C23 (UJU).
 3. LED Connector Specification: JST, SM06B-SHJH(HF).
 4. Torque of user hole: 3.0~4.0kgf-cm
 5. Tilt and partial disposition tolerance of display area as following

- 7. The COF area is weak & sensitive, So, please don't press the COF area.

6. Reliability

Table 13. Environment test conditions

No	Test Item	Condition
1	High temperature storage test	Ta= 60°C 240h
2	Low temperature storage test	Ta= -20°C 240h
3	High temperature operation test	Ta= 50°C 50%RH 240h
4	Low temperature operation test	Ta= 0°C 240h
5	Vibration test (non-operating)	Wave form : random Vibration level : 1.00G RMS Bandwidth : 10-300Hz Duration : X, Y, Z, 10 min One time each direction
6	Shock test (non-operating)	Shock level : 100G Waveform : half sine wave, 2ms Direction : \pm X, \pm Y, \pm Z One time each direction
7	Humidity condition Operation	Ta= 40 °C ,90%RH
8	Altitude operating storage / shipment	0 - 16,400 feet(5,000m) 0 - 40,000 feet(12,192m)
9	Maximum Storage Humidity for 4 corner light leakage Mura.	Max 70%RH , Ta=40˚ℂ

 $\{$ Result evaluation criteria $\}$ There should be no change which might affect the practical display function when the display quality test is conducted under normal operating condition.

7. International standards

7-1. Safety

- a) UL 60950-1, Underwriters Laboratories Inc.
 Information Technology Equipment Safety Part 1 : General Requirements.
- b) CAN/CSA C22.2 No.60950-1-07, Canadian Standards Association.
 Information Technology Equipment Safety Part 1 : General Requirements.
- c) EN 60950-1, European Committee for Electrotechnical Standardization (CENELEC).
 Information Technology Equipment Safety Part 1 : General Requirements.
- d) IEC 60950-1, The International Electrotechnical Commission (IEC).
 Information Technology Equipment Safety Part 1 : General Requirements.

7-2. EMC

- a) ANSI C63.4 "American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz."
 - American National Standards Institute (ANSI), 2003.
- b) CISPR 22 "Information technology equipment Radio disturbance characteristics Limit and methods of measurement." International Special Committee on Radio Interference (CISPR), 2005.
- c) CISPR 13 "Sound and television broadcast receivers and associated equipment Radio disturbance characteristics Limits and method of measurement."

 International Special Committee on Radio Interference (CISPR), 2006.

7-3. Environment

a) RoHS, Directive 2011/65/EU of the European Parliament and of the council of 8 June 2011

8. Packing

8-1. Designation of lot mark

a) Lot mark

A,B,C : Size (Inch) D : Year

E: Month $F \sim M$: Serial No.

Note:

1. Year

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020
Mark	Α	В	С	D	Е	F	G	Н	J	K

2. Month

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Mark	1	2	3	4	5	6	7	8	9	Α	В	С

b) Location of lot mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module. This is subject to change without prior notice.

8-2. Packing form

a) Package quantity in one box: 14 pcs (2 Module is packed in 1 Bag)

b) Box size: 418(L)*365(W)*492(H)

Ver. 0.3 Mar. 28, 2013 32 / 30

9. Precautions

Please pay attention to the followings when you use this TFT LCD module.

9-1. Mounting Precautions

- (1) You must mount a module using holes arranged in left & right sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the Module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. Operating precautions

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage: $V=\pm 200 \text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In higher temperature, it becomes lower.)
 And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can not be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw (if not, it causes metal foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.
- (10)Please conduct image sticking test after 2-hour aging with Full white or Rolling PTN and normal temperature ($25\sim40^{\circ}$ C)

9-3. Electrostatic discharge control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. Precautions for strong light exposure

Strong light exposure causes degradation of polarizer and color filter.

9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

9-6. Handling precautions for protection film

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
