

TFT-Display Datenblatt

Modell LM215WF1-TLD1

Kurzdaten

Hersteller LG Display

Diagonale 21,5" / 54,6cm

Format 16:9

Auflösung 1920x1080

Backlight 2xCCFL/200cd/m²

Temperatur 0...+50°C (Betrieb)

1. General Description

LM215WF1 is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Lamp(CCFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. It has a 21.5inch diagonally measured active display area with Full HD resolution (1080 vertical by 1920 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,7M(True) colors.

It has been designed to apply the 8Bit 2 port LVDS interface.

It is intended to support displays where high brightness, super wide viewing angle, high color saturation, and high color are important.

General Features

[Figure 1] Block diagram

| Active Screen Size | 21.53 inches(546.86mm) diagonal |
|------------------------|--|
| Outline Dimension | 495.6(H) x 292.2(V) x 14.5(D) mm (Typ.) |
| Pixel Pitch | 0.248 mm x 0.248mm |
| Pixel Format | 1920 horiz. By 1080 vert. Pixels RGB stripes arrangement |
| Color Depth | 8-bit (6bit + A FRC) |
| Luminance, White | 200 cd/m ² (Center 1 points) |
| Viewing Angle(CR>10) | R/L 90(Typ.), U/D 50(Typ.) |
| Power Consumption | Total 17.8W(typ)/logic(4.5W), Inverter(13.3W) @ lamp current 9 ^{mA}] |
| Weight | 1,900g |
| Display Operating Mode | Transmissive mode, normally white |
| Surface Treatment | Hard coating(3H), Anti-glare treatment of the front polarizer |

Ver. 0.4 May. 22.2009 4 / 31

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Valu | ies | Units | Notes | |
|----------------------------|----------|----------------|-----|--------|-------------|--|
| raiametei | Syllibol | Symbol Min Max | | Offics | Notes | |
| Power Input Voltage | VLCD | 0 | 6.0 | Vdc | at 25 ± 2°C | |
| Operating Temperature | Тор | 0 | 50 | °C | | |
| Storage Temperature | Тѕт | -20 | 60 | °C | 1 2 | |
| Operating Ambient Humidity | Нор | 10 | 90 | %RH | 1, 2 | |
| Storage Humidity | Hst | 10 | 90 | %RH | | |

Note: 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39 °C Max, and no condensation of water.

Note: 2. Maximum Storage Humidity is up to 40°C, 70% RH only for 4 corner light leakage Mura.

[Figure 2] Temperature and relative humidity

Ver. 0.4 May. 22.2009 5 / 31

3. Electrical Specifications

3-1. Electrical Characteristics

It requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the CCFL, is typically generated by an inverter. The inverter is an external unit to the LCDs.

Table 2. ELECTRICAL CHARACTERISTICS

| Parameter | | Symbol | Values | | | Unit | Notes |
|-------------------------------|----------|-------------|---------|---------|---------|-------------------|-------|
| raranietei | Symbol | Min | Тур | Max | Offic | Notes | |
| MODULE: | | | | | | | |
| Power Supply Input Voltage | | VLCD | 4.5 | 5.0 | 5.5 | Vdc | |
| Permissive Power Input Ripple | | V RF | - | - | 100 | mV | 13 |
| Power Supply Input Current | | ILCD | 595 | 700 | 805 | mA | 1 |
| Fower Supply Input Current | | ILCD | 765 | 900 | 1035 | mA | 2 |
| Differential Impedance | | Zm | 90 | 100 | 110 | ohm | |
| Power Consumption | | Plcd | 3.0 | 3.5 | 4.03 | Watt | 1 |
| Fower Consumption | | PLCD | 3.8 | 4.5 | 5.2 | Watt | 2 |
| Rush current | | Irush | - | - | 3 | Α | 3 |
| LAMP: | | | | | | | |
| Operating Voltage | | VBL | 720 | 740 | 1000 | V _{RMS} | 4, 5 |
| Operating voltage | | V DL | (9.5mA) | (9.0mA) | (2.5mA) | | |
| Operating Current | | IBL | 2.5 | 9.0 | 9.5 | mA _{RMS} | 4 |
| Established Starting Voltage | | Vs | | | | | 4, 6 |
| | at 25 °C | | | | 1250 | V_{RMS} | |
| | at 0 °C | | | | 1550 | V_{RMS} | |
| Operating Frequency | | fBL | 40 | - | 70 | kHz | 7 |
| Discharge Stabilization Time | | Ts | | | 3.0 | Min | 4, 8 |
| Power Consumption | | PBL | - | 13.32 | 14.65 | Watt | 9 |
| Life Time | | | 35,000 | | | Hrs | 4, 10 |

Note: The design of the inverter must have specifications for the lamp in LCD Assembly.

The performance of the Lamp in LCM, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC inverter. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter.

When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter (no lighting, flicker, etc) never occurs. When you confirm it, the LCD–Assembly should be operated in the same condition as installed in you instrument.

Ver. 0.4 May. 22.2009 6 / 31

Note. Do not attach a conducting tape to lamp connecting wire. If the lamp wire attach to a conducting tape, TFT-LCD Module has a low luminance and the inverter has abnormal action. Because leakage current is occurred between lamp wire and conducting tape.

- 1. The specified current and power consumption are under the V_{LCD} =5.0V, 25 \pm 2°C, f_V =60Hz condition whereas mosaic pattern(8 x 6) is displayed and f_V is the frame frequency.
- 2. The current is specified at the maximum current pattern.
- 3. The duration of rush current is about 5ms and rising time of power Input is $500 \text{us} \pm 20\%$.(min.).
- 4. Specified values are for a single lamp.
- 5. Operating voltage is measured at 25 \pm 2°C, and follows as below condition.

The variance of the voltage is \pm 10%. (Based on single Lamp.)

The variance of the voltage is \pm 20%. (Based on system & Test equipment tolerance.)

6. The voltage above V_s should be applied to the lamps for more than 1 second for start-up. (Inverter open voltage must be more than lamp starting voltage.)

Otherwise, the lamps may not be turned on. The used lamp current is the lamp typical current.

- 7. The output of the inverter must have symmetrical(negative and positive) voltage waveform and symmetrical current waveform (Unsymmetrical ratio is less than 10%). Please do not use the inverter which has unsymmetrical voltage and unsymmetrical current and spike wave. Lamp frequency may produce interface with horizontal synchronous frequency and as a result this may cause beat on the display. Therefore lamp frequency shall be as away possible from the horizontal synchronous frequency and from its harmonics in order to prevent interference.
- 8. Let's define the brightness of the lamp after being lighted for 5 minutes as 100%. T_s is the time required for the brightness of the center of the lamp to be not less than 95%. The used lamp current is the lamp typical current.
- 9. The lamp power consumption shown above does not include loss of external inverter.

- The used lamp current is the lamp typical current. ($P_{BL} = V_{BL} \times I_{BL} \times N_{Lamp}$) 10. The life is determined as the time at which brightness of the lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at 25 \pm 2°C.
- 11. Requirements for a system inverter design, which is intended to have a better display performance, a better power efficiency and a more reliable lamp, are following.

It shall help increase the lamp lifetime and reduce leakage current.

- a. The asymmetry rate of the inverter waveform should be less than 10%.
 - b. The distortion rate of the waveform should be within $\sqrt{2} \pm 10\%$.
 - * Inverter output waveform had better be more similar to ideal sine wave.

- 12. The inverter which is combined with this LCM, is highly recommended to connect coupling(ballast) condenser at the high voltage output side. When you use the inverter which has not coupling(ballast) condenser, it may cause abnormal lamp lighting because of biased mercury as time goes.
- 13. Permissive power ripple should be measured under V_{LCD} =12.0V, 25°C, fV(frame frequency)=MAX condition and At that time, we recommend the bandwidth configuration of oscilloscope is to be under 20Mhz. See the figure 3.
- 14. In case of edgy type back light with over 4 parallel lamps, input current and voltage wave form should be synchronized

7 / 31 Ver. 0.4 May. 22.2009

 \bullet Permissive Power input ripple (V_{LCD} =5.0V, 25°C, fV(frame frequency)=MAX condition)

Black pattern

 \bullet Power consumption (V $_{LCD}$ =5.0V, 25 $^{\circ}\text{C},$ fV (frame frequency=60Hz condition)

Typical power Pattern

3. Data Format

1) LVDS 2 Port

< LVDS Data Format >

Table 4. BACKLIGHT CONNECTOR PIN CONFIGURATION(CN2,CN3,CN4,CN5)

The backlight interface connector is a model 35001HS-02LD manufactured by Yeonho. The mating connector part number are 35001WR-02L or equivalent. The pin configuration for the connector is shown in the table below.

| Pin | Symbol | Description | Notes |
|-----|--------|-----------------------|-------|
| 1 | HV | High Voltage for Lamp | 1 |
| 2 | LV | Low Voltage for Lamp | 2 |

Notes:

- 1. The high voltage power terminal is colored gray.
- 2. The low voltage pin color is blue.

Ver. 0.4 May. 22.2009 12/31

3-3. Signal Timing Specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

Table 5. Timing Table

| ITEM | Symbol | | Min | Тур | Max | Unit | Note |
|------------|-----------|------|-------|-------|-------|--------|-----------------|
| DCLK | Period | tclk | 11.42 | 14.44 | 15.38 | ns | Pixel frequency |
| DCLK | Frequency | - | 60 | 72 | 87.5 | MHz | : Typ.138.5MHz |
| | total | tHP | 1000 | 1088 | 1120 | tclk | |
| | Frequency | fH | 64 | 66 | 83 | KHz | |
| Horizontal | Blanking | | 40 | 128 | 160 | tclk | |
| | valid | twн | 960 | 960 | 960 | tclk/2 | |
| | total | tvp | 1090 | 1100 | 1160 | thp | |
| Vertical | Frequency | fv | 50 | 60 | 75 | Hz | |
| Vertical | Blanking | | 10 | 20 | 80 | thp | |
| | valid | twv | 1080 | 1080 | 1080 | thp | |

Note:

- 1. DE Only mode operation. The input of Hsync & Vsync signal does not have an effect on LCD normal operation.
- 2. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rates.
- 3. Horizontal period should be even.

Ver. 0.4 May. 22.2009 13/31

3-4. Signal Timing Waveforms

1. DCLK, DE, DATA waveforms

2. Horizontal waveform

3. Vertical waveform

3-5. Color Input Data Reference

The Brightness of each primary color(red,green,blue) is based on the 8-bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Table 6. COLOR DATA REFERENCE

Notes: 1. Please avoid floating state of interface signal at invalid period.

- 2. When the interface signal is invalid, be sure to pull down the power supply for LCD V_{LCD} to 0V.
- 3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

Ver. 0.4 May. 22.2009 16 / 31

3-7. V_{LCD} Power Dip Condition

[Figure 7] Power dip condition

1) Dip condition

$$3.5V \le V_{LCD} < 4.5V$$
 , $t_d \le 20ms$

2)
$$V_{LCD}$$
 < 3.5V

 V_{LCD} -dip conditions should also follow the Power On/Off conditions for supply voltage.

Ver. 0.4 May. 22.2009 17 / 31

4. Optical Specifications

Optical characteristics are determined after the unit has been 'ON' for approximately 30 minutes in a dark environment at 25 ± 2 °C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0 ° and aperture 1 degree.

FIG. 1 presents additional information concerning the measurement equipment and method.

[Figure 8] Optical characteristic measurement equipment and method

Table 8. OPTICAL CHARACTERISTICS (Ta=25 °C, V_{LCD} =5.0V, f_V =60Hz Dclk=69.25MHz, I_{BL} =9.0mA)

Ver. 0.4 May. 22.2009 18 / 31

Notes 1. Contrast Ratio(CR) is defined mathematically as:

Contrast Ratio =
$$\frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

It is measured at center point(Location P1)

- 2. Surface luminance is the luminance value at center 1 point(1) across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 9.
- 3. The variation in surface luminance , δ WHITE is defined as :

For more information see FIG 9.

- 4. Response time is the time required for the display to transition from black to white (Rise Time, Tr_R) and from white to black (Decay Time, Tr_D). For additional information see FIG 3.
- 5. Color gamut is calculated from CIE 1931 space.
- 6. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 5.
- 7. Gray scale specification Gamma Value is approximately 2.2. For more information see Table 11.

Ver. 0.4 May. 22 . 2009 19 / 31

Measuring point for surface luminance & measuring point for luminance variation.

[FIG 9] Measure Point for Luminance

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[FIG 10] Response Time

Ver. 0.4 May. 22.2009 20 / 31

Dimension of viewing angle range.

[FIG 12] Viewing angle

[FIG 13] Sample Luminance vs. gray scale [FIG 14] Sample Log-log plot of (using a 256 bit gray scale) luminance vs. gray scale

$$L = aV^r + L_b \qquad \log(L - L_b) = r\log(V) + \log(a)$$

Here the Parameter $\,\alpha\,$ and $\,\gamma\,$ relate the signal level V to the luminance L. The GAMMA we calculate from the log-log representation (FIG. 7)

Ver. 0.4 May. 22.2009 21 / 31

Table 10. Gray Scale Specification

| Gray Level | Relative Luminance [%] (Typ.) |
|------------|-------------------------------|
| 0 | 0.11 |
| 31 | 1.08 |
| 63 | 4.72 |
| 95 | 11.49 |

b) Location of Lot Mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module. This is subject to change without prior notice.

8-2. Packing Form

a) Package quantity in one box: 8pcs

b) Box Size: 370mm x 320mm x 580mm

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage : $V=\pm 200 mV$ (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw. (if not, it causes metallic foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.

Ver. 0.4 May. 22 . 2009 29 / 31

9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

Warranty for Non-Inclusion of Hazardous Substances in Products (ver.4.1)

Our company hereby warrants and guarantees that all of or part of products, including, but not limited to, the peripherals, accessories or (including your subsidiaries and affiliated company) directly or packages, manufactured and/or delivered to your company indirectly by our company (including our subsidiaries or affiliated companies) are free from any of the substances listed in your company's Technology Standard or its subsequent revision, including the following articles,

- 1. Our company actually cooperates with environment-friendly policy pushed by your company and follows the total abolition schedule of Pb, Cd, Cr+6, Hg, PBB and PBDEs proposed by Hazardous substances management standard in your company
- 2. Our company don't excessively enclose to the noxious material including Cd, Pb in products and parts supporting to the department of DID in LG electronics. If the environmental accident is occurred by our company's mistake and insufficient improvement, acts on our company's responsibility
- 3. Our company ensure that all of information submitted to your company is not arbitrary estimation and is to the exact document based on reliable data.

Pb Free Soldering Pb Free Rohs Free TCO '03

Definition:

■ Pb Free Soldering: Parts must meet DID's Heat resistance condition. (Reflow Type: 250°C, 10sec, Flow Type: 260°C, 10sec)

■ Pb Free: Lead wire plating is Pb Free(Pb content < 1,000ppm) and Inner contact point and Body itselt don't contain Pb(Pb content < 1,000ppm)

■ RoHS Free: Part does not contain Pb,Cd,Cr+6,Hg,PBBs and PBDEs(Cd<100ppm,Others<1,000ppm) and supplier must submit evidences(ICP,AAS,UV-Vis,GC) certificated by authorised agency

■ TCO '03: Part meet TCO'03 and LG electronics requirement (Cd<5ppm, Pb<50ppm, Hg<2ppm, Cr+6,PBBs,PBDEs<100)

Company name: LG-philips 200)

Date: Jan. 11. 2004.

Representative: Mun-Cheol Jeong
