# 1. Basic Specifications

## 1.1 Display Specifications

- 1) LCD Display Mode : FSTN, Positive, Transflective
- 2) Display Color : Display Data = "1" : Dark Gray (\*1)  
: Display Data = "0" : Light Gray (\*2)
- 3) Viewing Angle : 6H
- 4) Driving Method : 1/64 duty, 1/9 bias
- 5) Backlight : White LED backlight

Note:

\*1. Color tone may slightly change by Temperature and Driving Condition.

\*2. The Color is defined as the inactive / background color

## 1.2 Mechanical Specifications

- 1) Outline Dimension : 149.0 x 57.0 x 12.9 MAX.  
see attached Outline Drawing for details

## 1.3 Block Diagram

**1.4 Terminal Functions**

Pin No. K1	Pin Name	I/O	Descriptions
1	VOUT	Power	Power Booster Output for V0
2	V0	Input	LCD Contrast Reference Input
3	VSS	Power	0V Power Supply, GND
4	VDD	Power	Positive Power Supply
5	BUSY	Output	Indicate the RA8806 in busy state or not,could been used for MPU to get busy state by connecting it to IO port
6	NC	NC	No connection,leave open
7	/CS	Input	Chip Select Signal /CS=LOW: Data IO is enabled
8	RS	Input	Register Select RS=HIGH: write address of register and read status word RS=LOW: write & read data of register and DDRAM
9	/WR	Input	Write enable input, active LOW
10	/RD	Input	Read enable input, active LOW
11	DB0	I/O	8-bit bi-directional data bus
:	:		
18	DB7		
19	/RST	Input	Reset Signal: /RST = L, Reset the LCD Module /RST = H, Normal Running
20	NC	NC	No connection,leave open
21	BLA	Power	Positive Power Supply for LED backlight
22	BLK	Power	Negative Power Supply for LED backlight

note:

\*1. The LCM Fixed to 80 mode by default ,could been changed to 68 mode by changing jumpers

## 2. Absolute Maximum Ratings

Items	Symbol	Min.	Max.	Unit	Condition
Supply Voltage	$V_{DD}$	0	+5.5	V	$V_{SS} = 0V$
Input Voltage	$V_{IN}$	$V_{SS}-0.3$	$V_{DD}+0.3$	V	$V_{SS} = 0V$
Operating Temperature	$T_{OP}$	-20	+70	°C	No Condensation
Storage Temperature	$T_{ST}$	-30	+80	°C	No Condensation

Cautions:

Any Stresses exceeding the Absolute Maximum Ratings may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

## 3. Electrical Characteristics

### 3.1 DC Characteristics

$V_{SS}=0V, V_{DD}=5.0V, T_{OP}=25^{\circ}C$

Items	Symbol	MIN.	TYP.	MAX.	Unit	Applicable Pin
Operating Voltage	$V_{DD}$	4.7	5.0	5.3	V	VDD
Input High Voltage	$V_{IN}$	$0.8 \times V_{DD}$	-	VDD	V	DB0~DB7, /WR, /RD, /CS, RS, /RES
Input Low Voltage	$V_{IN}$	VSS	-	$0.1 \times V_{DD}$	V	DB0~DB7, /WR, /RD, /CS, RS, /RES
LCD Contrast Reference Voltage	$V_0$	-	12.5	-	V	V0
Operating Current	$I_{DD}$	-	7.0	20	mA	VDD

### 3.2 LED Backlight Circuit Characteristics

$BLK=0V, I_{f_{BLA}}=85mA, T_{OP}=25^{\circ}C$

Items	Symbol	MIN.	TYP.	MAX.	Unit	Applicable Pin
Forward Voltage	$V_{f_{BLA}}$	-	5.0	-	V	BLA
Forward Current	$I_{f_{BLA}}$	-	85	100	mA	BLA

Cautions:

Exceeding the recommended driving current could cause substantial damage to the backlight and shorten its lifetime.

**3.3 AC Characteristics**

**3.3.1 8080 Mode**

$V_{SS}=0V, V_{DD}=5.0V, T_{OP}=25^{\circ}C$

Item	Symbol	MIN.	TYP.	MAX.	Unit
System Cycle Time (*2)	t <sub>cyc8</sub>	320	-	-	ns
Strobe Pulse Width	t <sub>cc8</sub>	63	-	-	ns
Address Setup Time	t <sub>as8</sub>	10	-	-	ns
Address Hold Time	t <sub>ah8</sub>	25	-	-	ns
Data Setup Time	t <sub>ds8</sub>	38	-	-	ns
Data Hold Time	t <sub>dh8</sub>	25	-	-	ns
Data Access Time	t <sub>acc8</sub>	-	-	25	ns
Output disable Time	t <sub>oh8</sub>	-	-	13	ns

Note: \*1. Input signal rise/fall time should be less than 20ns  
 \*2. System clock=6MHz  
 \*3. Bus timing is for one byte transaction only.  
 For details, please refer to RA8806 datasheet.

**Bus Timing Diagram**

**3.4 Reset Timing**

$V_{SS}=0V, V_{DD}=5.0V, T_{OP}=25^{\circ}C$

Item	Symbol	MIN.	TYP.	MAX.	Unit
Reset setup time	t <sub>rs</sub>	1.3	-	-	ms
Reset hold time	t <sub>rh</sub>	1.3	-	-	ms
Reset active time (*1)	t <sub>rst</sub>	0.2	-	-	us

Note: \*1. System clock=6MHz

**Reset Timing Diagram**

## 4. Function Specifications

### 4.1 Adjusting the Display Contrast

A Variable-Resistor must be connected to the LCD module for providing a reference to V0. Adjusting the VR will result the change of LCD display contrast. The recommended value of VR is 25k to 50k

### 4.2 Resetting the LCD module

The LCD module should be initialized by hardware reset, using /RST terminal. While turning on the VDD and VSS power supply, maintain /RST terminal at LOW level. After the power supply stabilized, release the reset terminal (/RST=HIGH)

### 4.3 Interfacing Setting

Jumpers could be used to change bus interfacing family

Jumper				Function Discription
JP7	JP8	JP9	JP10	
open	close	close	open	8080 mode 8 bit selected <default>
close	close	open	open	6800 mode 8 bit selected
close	open	open	close	6800 mode 4 bit selected

### 4.4 Display Pixel Map

1,1 (D7)	2,1 (D6)	3,1 (D5)	4,1 (D4)	5,1 (D3)	---	---	236,1 (D4)	237,1 (D3)	238,1 (D2)	239,1 (D1)	240,1 (D0)
1,2 (D7)	2,2 (D6)	3,2 (D5)	4,2 (D4)	5,2 (D3)	---	---	236,2 (D4)	237,2 (D3)	238,2 (D2)	239,2 (D1)	240,2 (D0)
1,3 (D7)	2,3 (D6)	3,3 (D5)	4,3 (D4)	5,3 (D3)	---	---	236,3 (D4)	237,3 (D3)	238,3 (D2)	239,3 (D1)	240,3 (D0)
:	:	:	:	:	:	:	:	:	:	:	:
1, 62 (D7)	2, 62 (D6)	3, 62 (D5)	4, 62 (D4)	5, 62 (D3)	---	---	236,62 (D4)	237, 62 (D3)	238,262 (D2)	239, 62 (D1)	240,62 (D0)
1, 63 (D7)	2, 63 (D6)	3, 63 (D5)	4, 63 (D4)	5, 63 (D3)	---	---	236, 63 (D4)	237, 63 (D3)	238, 63 (D2)	239,263 (D1)	240,63 (D0)
1, 64 (D7)	2, 64 (D6)	3, 64 (D5)	4, 64 (D4)	5, 64 (D3)	---	---	236, 64 (D4)	237, 64 (D3)	238,264 (D2)	239, 64 (D1)	240,64 (D0)

Pixel mapping (Top View)

Note:

- \*1. Based on the top view of the LCD module, the 1, 1 (x, y) pixel is the upper-left pixel; the 240, 64 (x, y) pixel is the lower-right pixel.
- \*2. For the details of memory mapping please refer to RA8806 datasheet.

**4.5 Control Data and Command**

The LCD module setting is controlled by the internal Register Values.

The Register Address should be addressed when RS=1 and Register Value should be issued when RS=0.

A full command sequence should be as follow.

Steps	/RD	/WR	RS	Data (DB0~ DB7)
1 <sup>st</sup>	1	0	1	Register Address
2 <sup>nd</sup>	1	0	0	Register Value

**4.6 Command Summary**

Note:

For details please refer to RA8806 datasheet.

**Note:**

- \*1. It is suggested to check the BUSY before sending the Control Data.
- \*2. For the details, please refer to RA8806 Data sheet.

## 5. Design and Handling Precaution

1. The LCD panel is made by glass. Any mechanical shock (eg. dropping from high place) will damage the LCD module.
2. Do not add excessive force on the surface of the display, which may cause the Display color change abnormally.
3. The polarizer on the LCD is easily get scratched. If possible, do not remove the LCD protective film until the last step of installation.
4. Never attempt to disassemble or rework the LCD module.
5. Only Clean the LCD with Isopropyl Alcohol or Ethyl Alcohol. Other solvents (eg. water) may damage the LCD.
6. When mounting the LCD module, make sure that it is free from twisting, warping and distortion.
7. Ensure to provide enough space (with cushion) between case and LCD panel to prevent external force adding on it, or it may cause damage to the LCD or degrade the display result.
8. Only hold the LCD module by its side. Never hold LCD module by add force on the heat seal or TAB.
9. Never add force to component of the LCD module. It may cause invisible damage or degrade of the reliability.
10. LCD module could be easily damaged by static electricity. Be careful to maintain an optimum anti-static work environment to protect the LCD module.
11. When peeling off the protective film from LCD, static charge may cause abnormal display pattern. It is normal and will resume to normal in a short while.
12. Take care and prevent get hurt by the LCD panel sharp edge.
13. Never operate the LCD module exceed the absolute maximum ratings.
14. Keep the signal line as short as possible to prevent noisy signal applying to LCD module.
15. Never apply signal to the LCD module without power supply.
16. IC chip (eg. TAB or COG) is sensitive to the light. Strong lighting environment could possibly cause malfunction. Light sealing structure casing is recommend.
17. LCD module reliability may be reduced by temperature shock.
18. When storing the LCD module, avoid exposure to the direct sunlight, high humidity, high temperature or low temperature. They may damage or degrade the LCD module
