DESCRIPTION

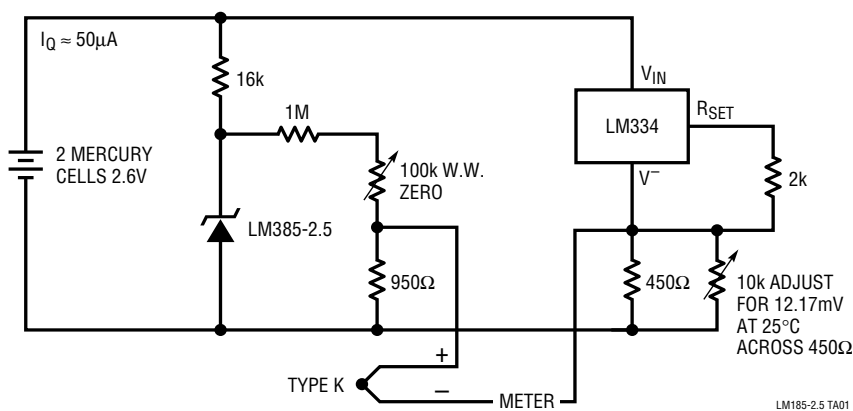

The LM185-2.5 is a two-terminal band gap reference diode that has been designed for applications which require precision performance with micropower operation. The device provides guaranteed operation specifications at currents as low as 20 μ A. The nominal voltage is 2.5V with both 1% and 2% tolerances available. Some additional features are: maximum dynamic impedance of 1 Ω , low noise and excellent stability over time and temperature. The advanced design, processing and testing techniques make Linear's LM185-2.5 a superior choice over previous designs. A circuit for cold junction compensation of a thermocouple is shown below.

For applications requiring guaranteed temperature drift, see the LT1034 data sheet.

Note 1: Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

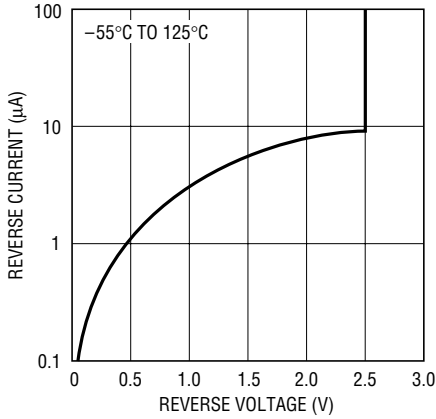

Note 2: All specifications are for $T_A = 25^\circ\text{C}$ unless otherwise noted. For the LM185-2.5 $T_{\text{MIN}} = -55^\circ\text{C}$ and $T_{\text{MAX}} = 125^\circ\text{C}$. For LM285-2.5, $T_{\text{MIN}} = -40^\circ\text{C}$ and $T_{\text{MAX}} = 85^\circ\text{C}$. For LM385-2.5, $T_{\text{MIN}} = 0^\circ\text{C}$ and $T_{\text{MAX}} = 70^\circ\text{C}$.

Note 3: For very low initial tolerance, consult LT1004 data sheet. The LT1004 is a low cost, pin for pin substitution device. For guaranteed temperature coefficient consult the LT1034-2.5 data sheet.
