## 1. General Specification

Signal Interface :	Digital 24-bits RGB
Display Technology :	a-Si TFT active matrix
Display Mode :	Normal White / Transmissive
Screen Size(Diagonal) :	9.0"
Outline Dimension :	211.1 x 126.5 x 5.8 (mm) (see attached drawing for details)
Active Area :	198.0 x 111.7 (mm)
Number of dots :	800 x 3 (RGB) x 480
Pixel Pitch :	0.2475 x 0.2327 (mm)
Pixel Configuration :	RGB Stripe
Backlight :	White LED
Surface Treatment :	Anti-Glare
Viewing Direction :	6 o'clock (Gray scale Inversion)(*1) 12 o'clock (*2)
Operating Temperature :	-20 ~ +70°C
Storage Temperature :	-30 ~ +80°C

Note:

\*1. For saturated color display content (eg. pure-red, pure-green, pure-blue or pure-colors -combinations).

\*2. For "color scales" display content.

\*3. Color tone may slightly change by temperature and driving condition.

## 2. Block Diagram

### 3. Terminal Function (Input Terminal)

Pin No.	Pin Name	I/O	Descriptions
1	VLED+	Power	Positive Backlight Power Supply
2	VLED+		
3	VLED-	Power	Negative Backlight Power Supply
4	VLED-		
5	GND	Power	Power GND (0V)
6	VCOM	Input	Common voltage
7	DVDD	Power	Power for Digital Circuit
8	MODE	Input	DE/SYNC mode select (*1)
9	DE	Input	Data input enable
10	VS	Input	Vertical Sync Input
11	HS	Input	Horizontal Sync Input
12	B7	Input	8bit Data for Blue
:	:		
19	B0		
20	G7	Input	8bit Data for Blue
:	:		
27	G0		
28	R7	Input	8bit Data for Blue
:	:		
35	R0		
36	GND	Power	Power GND (0V)
37	DCLK	Input	Sample clock(*2)
38	GND	Power	Power GND (0V)
39	L/R	Input	Left / right selection (*3)
40	U/D	Input	Up/down selection (*3)
41	VGH	Power	Gate ON Voltage
42	VGL	Power	Gate OFF Voltage
43	AVDD	Power	Power for Analog Circuit
44	RESET	Input	Global reset pin (*4)
45	NC	-	No connection
46	VCOM	Input	Common voltage
47	DITHB	Input	Dithering function (*5)
48	GND	Power	Power GND (0V)
49	NC	-	No connection
50	NC		

Note:

\* 1: DE/SYNC mode select. Normally pull high.

When select DE mode, MODE="1", VS and HS must pull high.

When select SYNC mode, MODE="0", DE must be grounded.

\* 2: Data shall be latched at the falling edge of DCLK.

\* 3: Selection of scanning mode

Setting of scan control input		Scanning direction
U/D	L/R	
GND	DVDD	Up to down, left to right
DVDD	GND	Down to up, right to left
GND	GND	Up to down, right to left
DVDD	DVDD	Down to up, left to right

\*4: Global reset pin. Active low to enter reset state. Suggest to connect with an RC reset circuit for stability. Normally pull high.

\*5: Dithering function enable control, normally pull high.

When DITHB=" 1 " ,Disable internal dithering function.

When DITHB=" 0 " ,Enable internal dithering function.

## 4. Absolute Maximum Ratings

Items	Symbol	Min.	Max.	Unit	Condition
Power voltage	VCC	-0.3	5.0	V	
	AVDD	-0.5	13.5	V	
	VGH	13.0	19.0	V	
	VGL	-12.0	-2.0	V	
	VGH-VGL	-	31.0	V	
Operating Temperature	T <sub>OP</sub>	-20	+70	°C	No Condensation
Storage Temperature	T <sub>ST</sub>	-30	+80	°C	No Condensation

Note:

- \*1. This rating applies to all parts of the module. And should not be exceeded.
- \*2. The operating temperature only guarantees operation of the circuit. The contrast, response speed, and the other specification related to electro-optical display quality is determined at the room temperature, T<sub>OP</sub>=25.
- \*3. Ambient temperature when the backlight is lit (reference value)
- \*4. Any Stresses exceeding the Absolute Maximum Ratings may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

## 5. Electrical Characteristics

### 5.1 DC Characteristics

AGND=GND=0V, Ta = 25°C

Items	Symbol	Min.	Typ.	Max.	Unit	Remark
Digital supply Voltage	DVDD	3.0	3.3	3.6	V	*3
Analog supply Voltage	AVDD	10.2	10.4	10.6	V	
Gate on voltage	V <sub>GH</sub>	16.3	17.0	17.7	V	
Gate off voltage	V <sub>GL</sub>	-5.7	-5.0	-4.3	V	
Input signal voltage	V <sub>COM</sub>	3.2	4.2	5.2	V	*1
Input logic high voltage	V <sub>IH</sub>	0.7DVDD	-	VDD	V	*4
Input logic low voltage	V <sub>IL</sub>	0	-	0.3DVDD	V	

Note:

- \*1. Typical Vcom is only a reference value .It must be optimized according to each LCM. Please use VR for Vcom circuit.
- \*2.Be sure to apply DVDD and VGL to the LCD first, and then apply VGH.
- \*3: DVDD setting should match the signals output voltage (refer to Note 3) of customer's system board.
- \*4: DCLK,HS,VS,RESET,U/D, L/R,DE,R0~R7,G0~G7,B0~B7,MODE,DITHB.

### 5.2 Current Consumption

Items	Symbol	Min.	Typ.	Max.	Unit	Remark
Current of digital supply voltage	I <sub>DVDD</sub>	-	5.5-	10	mA	DVDD=3.3V
Current of analog supply voltage	I <sub>AVDD</sub>	-	32	50	mA	AVDD=10.4V
Current of Gate on voltage	I <sub>VGH</sub>	-	0.3	1	mA	VGH=17.0
Current of Gate off voltage	I <sub>VGL</sub>	-	0.3	1	mA	VGL=-5.0

5.3 LED Backlight Circuit Characteristics

Top=25°C

Items	Symbol	MIN.	TYP.	MAX.	Unit	Note
Forward Voltage	$V_F$	8.4	9.6	10.5	V	
Forward Current	$I_F$	-	360	-	mA	
Operating Life Time	--	-	30000	-	hrs	

Note 1: The LED driving condition is defined for total backlight consumption, and which depend on Forward Current setting.

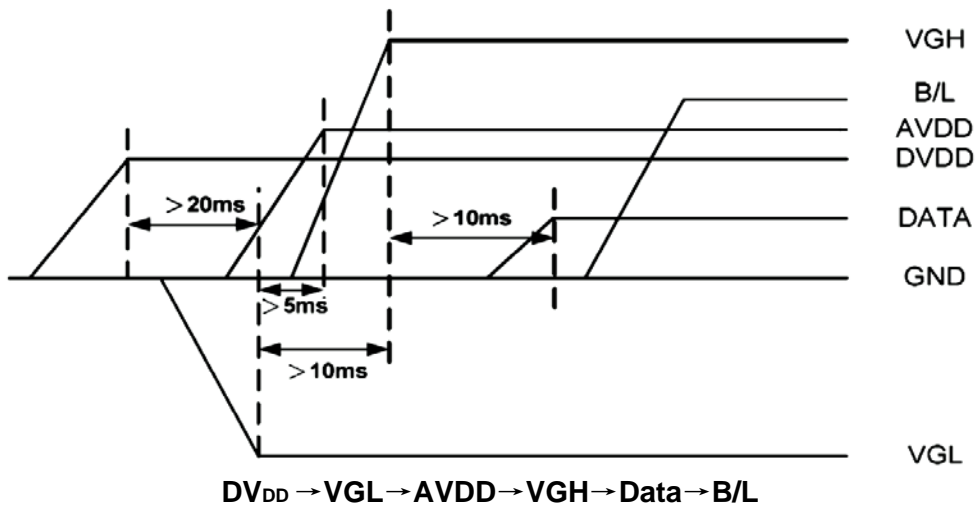

Note 2: Forward Voltage is just for reference for one serial.

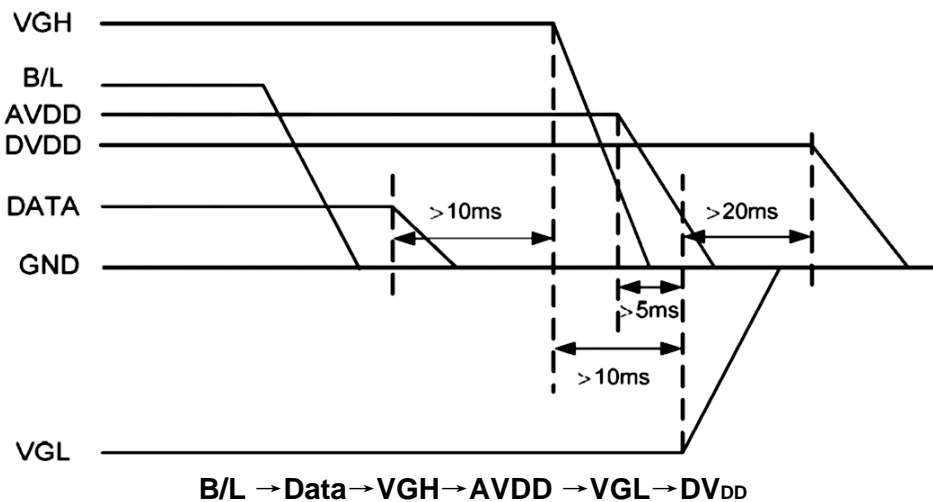

No. of LED = 12x3=36 pcs

5.4 Power Sequence

Power off:

Power on:

Note :Data include R0~R7,B0~B7,G0~G7,U/D,L/R,DCLK,HS,VS,DE.

## 6. AC Characteristics

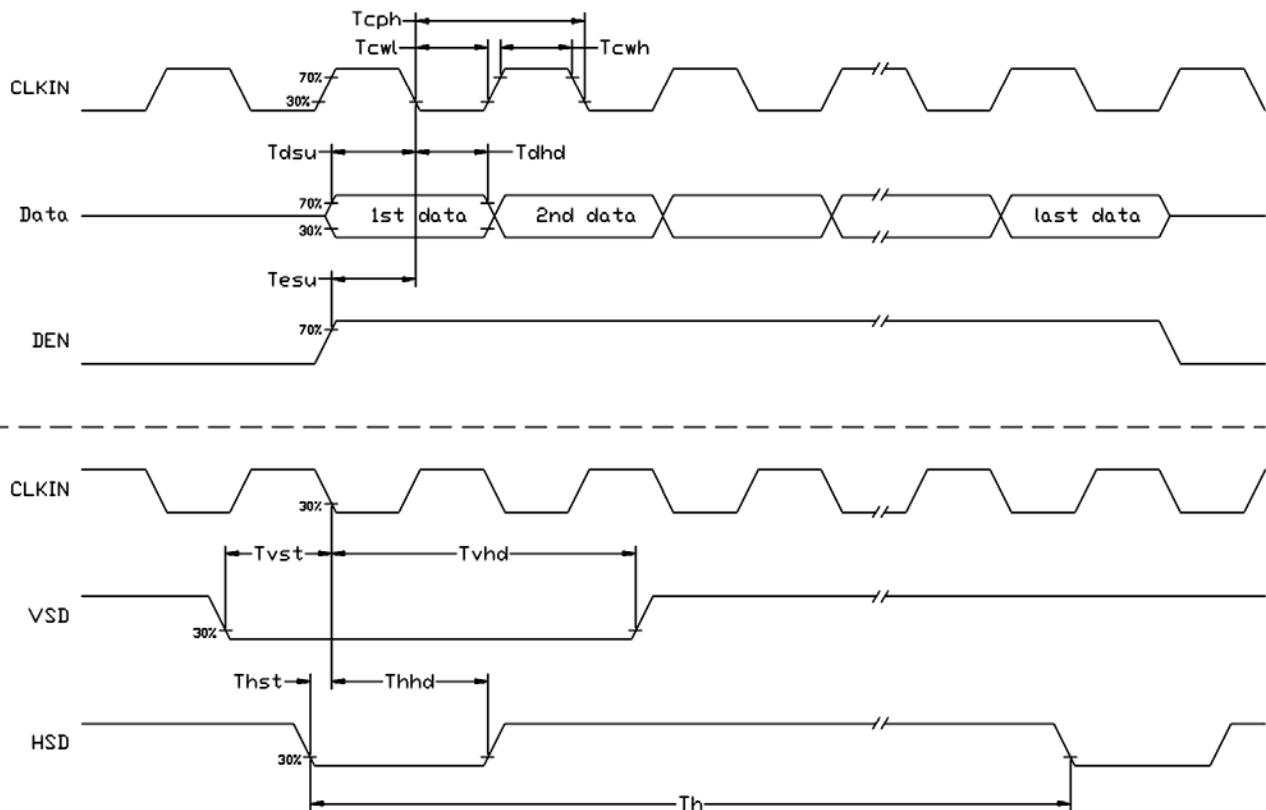

### 6.1 Timing Characteristics

VCC=3.3V, GND=0V, Ta=25°C

Item	Symbol	MIN.	TYP.	MAX.	Unit	Remark
HS setup time	Thst	8	-	-	ns	
HS hold time	Thhd	8	-	-	ns	
VS setup time	Tvst	8	-	-	ns	
VS hold time	Tvhd	8	-	-	ns	
Data setup time	Tdsu	8	-	-	ns	
Data hole time	Tdhd	8	-	-	ns	
DE setup time	Tesu	8	-	-	ns	
DV <sub>DD</sub> Power On Slew rate	TPOR	-	-	20	ms	From 0 to 90% DV <sub>DD</sub>
DCLK cycle time	Tcph	20	-	-	ns	
DCLK pulse duty	Tcwh	40	50	60	%	

Note: For the details of the timing, please see the Driver IC data sheet.

### 6.2 Input Clock and Data Timing Diagram

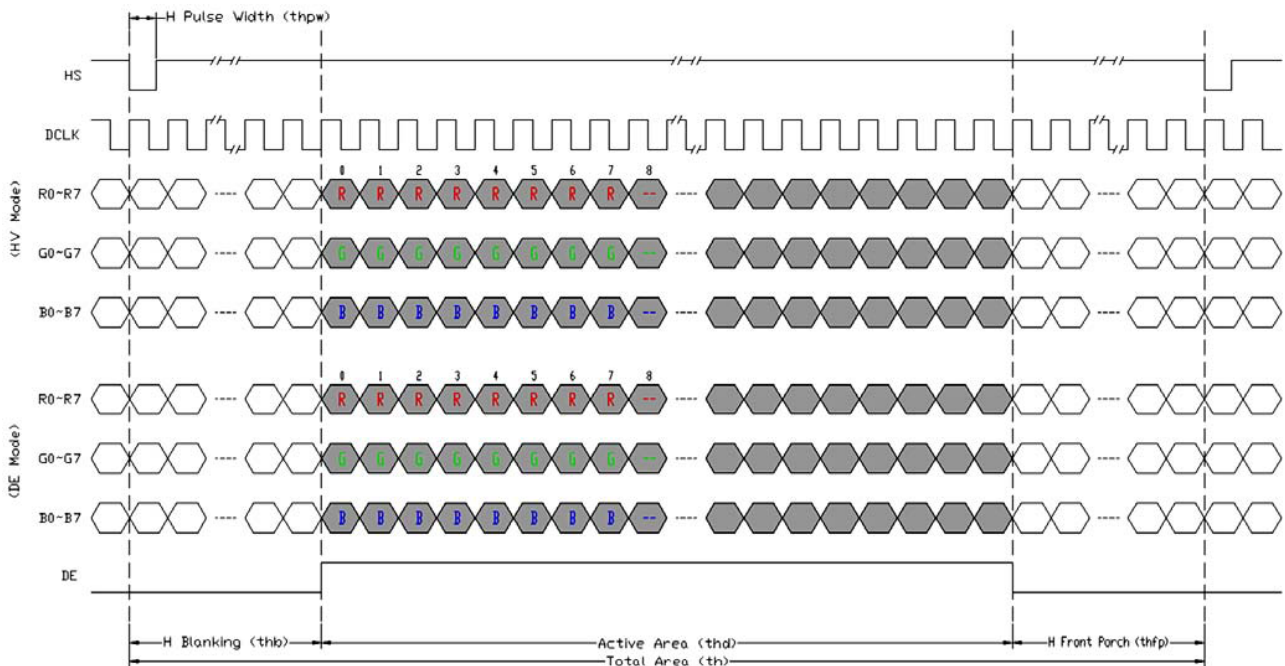

6.3 Input timing Characteristics of Interface

VCC=3.3V, GND=0V, Ta=25°C

Parameter	Symbol	MIN.	TYP.	MAX.	Unit	Remark
Horizontal Display Area	thd	-	800	-	DCLK	
DCLK Frequency	fclk	26.4	33.3	46.8	DCLK	
One Horizontal Line	th	862	1056	1200	DCLK	
HS pulse width	thpw	1	-	40	DCLK	
HS Blanking	thb	46	46	46	DCLK	
HS Front Porch	thfp	16	210	354	DCLK	
Vertical Display Area	tvd	-	480	-	TH	
VS period time	tv	510	525	650	TH	
VS pulse width	tvpw	1	-	20	TH	
VS Blanking	tvb	23	23	23	TH	
VS Front Porch	tvfp	7	22	147	TH	

6.4 Data Input Format

Horizontal input timing diagram.

### 7. Optical Characteristics

Ta=25°C

Item	Symbol	Condition	MIN.	TYP.	MAX.	UNIT	Note.
Viewing angle (CR≥10)	$\theta_L$	9 o'clock	60	70	-	degree	*2
	$\theta_R$	3 o'clock	60	70	-		
	$\theta_T$	12 o'clock	40	50	-		
	$\theta_B$	6 o'clock	60	70	-		
Response Time	$T_{on}$		-	10	20	msec	*3
	$T_{off}$		-	15	30	msec	
Contrast ratio	CR		400	500	-	-	*1
Color chromaticity	$W_x$		0.26	0.31	0.36		
	$W_y$		0.28	0.33	0.38		
Luminance	L		-	800	-	cd/m <sup>2</sup>	*4
Luminance uniformity	Y <sub>U</sub>		70	75	-	%	*4

Note:

\*1. Definition of Contrast Ratio

The contrast ratio could be calculate by the following expression:

Contrast Ratio (CR) = Luminance with all pixels white / Luminance with all pixels black

\*2 Definition of Viewing Angle

\*3 Definition of response time

\*4 Definition of Luminance Uniformity

Luminance uniformity (Lu)=

Min. Luminance form pt1~pt9 / Max Luminance form Pt1~pt9

## 8. Precautions of using LCD Modules

### Mounting

- Mounting must use holes arranged in four corners or four sides.
- The mounting structure so provide even force on to LCD module. Uneven force (ex. Twisted stress) should not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- It is suggested to attach a transparent protective plate to the surface in order to protect the polarizer. It should have sufficient strength in order to the resist external force.
- The housing should adopt radiation structure to satisfy the temperature specification.
- Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. Never rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics deteriorate the polarizer.)
- When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer

### Operating

- The spike noise causes the mis-operation of circuits. It should be within the  $\pm 200\text{mV}$  level (Over and under shoot voltage)
- Response time depends on the temperature.(In lower temperature, it becomes longer.)
- Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- When fixed patterns are displayed for a long time, remnant image is likely to occur.
- Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference

### Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

### Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

### Storage

When storing modules as spares for a long time, the following precautions are necessary.

- Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between  $5^{\circ}\text{C}$  and  $35^{\circ}\text{C}$  at normal humidity.
- The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

### Protection Film

- When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to be main on the polarizer. Please carefully peel off the protection film without rubbing it against the polarizer.
- When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

### Transportation

The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.
