LMV651

12 MHz, Low Voltage, Low Power Amplifier

General Description

National's LMV651 is a high performance, low power op amp IC implemented in National's advanced VIP50 process. The unity gain stable LMV651 features 12 MHz of bandwidth while consuming only 110 μ A of current, an exceptional bandwidth to power ratio in this op amp class, and maintains stability for capacitive loads as large as 500 pF.

The LMV651 provides superior performance and economy in terms of power and space usage. The LMV651 has a maximum input offset voltage of 1 mV, a rail to rail output stage and an input common-mode voltage range that includes ground. The LMV651 provides a PSRR of 95 dB, a CMRR of 100 dB and a total harmonic distortion (THD) of 0.003% at 1 kHz frequency and 600 Ω load

The LMV651 has an operating supply voltage range from 2.7V to 5.5V. The LMV651 can operate over a wide temperature range (-40°C to +125°C) making the op amp ideal for automotive applications, sensor applications and portable equipment applications. The LMV651 is available in the ultra tiny SC70-5 package, which is about half the size of the SOT23-5.

Features

(Typical 5V supply, unless otherwise noted)

■ Guaranteed 3.0V and 5.0V performance	
■ High unity gain bandwidth	12 MHz
■ Low power supply current	110 μ A
■ Max input offset voltage	1 mV
■ Capacitive load drive capability	500 pF
■ CMRR	100 dB
■ PSRR	95 dB
■ Input referred voltage noise	17nV/ \sqrt Hz
■ Output swing with 2 k Ω load	50 mV from rail
■ Total harmonic distortion	0.003% @ 1 kHz, 600 Ω
■ Temperature range	-40°C to 125°C

Applications

- Portable equipment
- Automotive
- Battery powered systems
- Sensors and Instrumentation

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but specific performance is not guaranteed. For guaranteed specifications and the test conditions, see the Electrical Characteristics Tables.

Note 2: Human body model: 1.5 k Ω in series with 100 pF. Machine Model: 0 Ω in series with 200 pF

Note 3: The maximum power dissipation is a function of $T_{J(MAX)}$, θ_{JA} , and T_A . The maximum allowable power dissipation is $P_D = (T_{J(MAX)} - T_A) / \theta_{JA}$. All numbers apply for packages soldered directly onto a PC board.

Note 4: Typical values represent the most likely parametric norm at the time of characterization.

Note 5: Limits are 100% production tested at 25 $^\circ\text{C}$. Limits over the operating temperature range are guaranteed through correlations using Statistical Quality Control (SQC) method.

Note 6: Positive current corresponds to current flowing into the device.

Note 7: Slew rate is the average of the rising and falling slew rates.

Note 8: Short circuit test is a momentary test.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

BANNED SUBSTANCE COMPLIANCE

National Semiconductor manufactures products and uses packing materials that meet the provisions of the Customer Products Stewardship Specification (CSP-9-111C2) and the Banned Substances and Materials of Interest Specification (CSP-9-111S2) and contain no "Banned Substances" as defined in CSP-9-111S2.

Leadfree products are RoHS compliant.
