

## Dual 300mA High Speed Low Dropout CMOS Voltage Regulators

### ■ General Description

The LN1182 series are highly accurate, Dual, low noise, CMOS LDO voltage regulators. Performance features of the series includes low output noise, high ripple rejection ratio, low dropout and very fast turn-on times.

The LN1182 includes a reference voltage source, error amplifiers, driver transistors, current limiters and phase compensators internally. The LN1182's current limiter's foldback circuit also operates as a short protect for the output current limiter. The output voltage for each regulator is set independently by laser trimming. Voltages are selectable in 50mV steps within a range of 1.0V to 6.0V. The EN function allows the output of each regulator to be turned off independently, resulting in greatly reduced power consumption.

### ■ Features

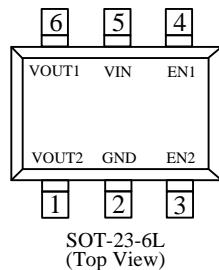

- Output Voltage Range : 1.0V to 6.0V (selectable in 50mV steps)
- Highly Accurate :  $\pm 2\%$
- Dropout Voltage : 180mV @ 100mA (3.0V type)
