

Low-Cost 1.27W Audio Power Amplifier

■ General Description

The LN2990 is a Class-AB audio power amplifier designed for mobile phones and other portable communication devices. It is capable of delivering 1.2W of continuous average power to an 8Ω BTL load with less than 1% distortion (THD+N) from a 5V DC power supply.

The LN2990 was designed specifically to provide high quality output power with a minimal amount of external components. It does not require output coupling capacitors or bootstrap capacitors. And with ultra low shutdown current, the LN2990 is ideally suited for mobile phone and other low voltage applications where minimal power consumption is a primary requirement. With special pop-click eliminating circuit, the LN2990 provides perfect pop-click characteristic during turn-on and turn-off transitions.

The LN2990 is unity-gain stable and can be configured by external gain-setting resistors.

■ Key Specifications

- PSRR @ f_{IN} = 217Hz, VDD = 5V 62dB(typ.)
- Power Output @VDD = 5.0V & 1% THD RL=8Ω
1.27W(typ.)
- Power Output @VDD = 3.0V & 1% THD RL=8Ω
400mW(typ.)
- Power Output @VDD = 5.0V & 1% THD RL=4Ω
2W(typ.)
- Shutdown Current 0.1μA(typ.)

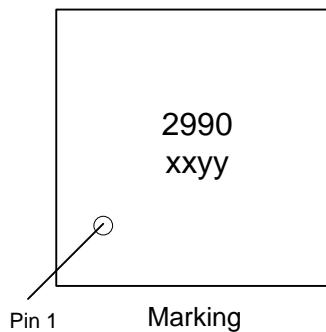

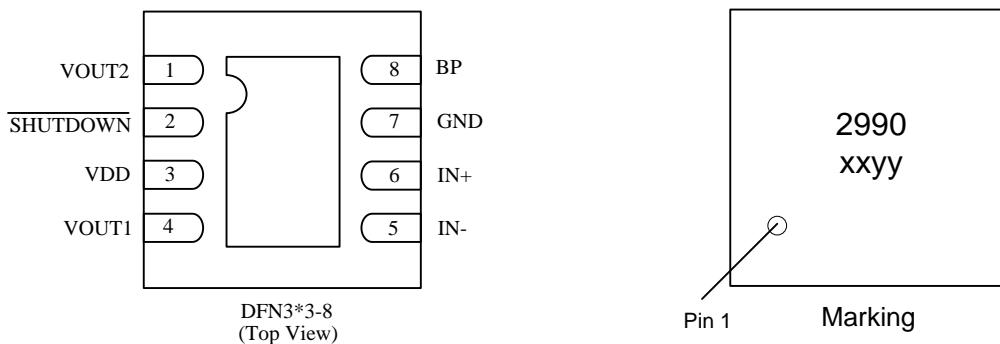

■ Operating Ratings

■ Typical Application Circuit

- Single-Ended Input Configuration

- Differential Input Configuration

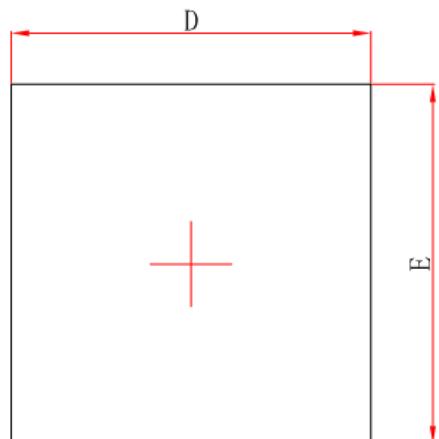

Note: The resistors (R_f) set the gain of the amplifier according to equation $\text{Gain} = 2 * R_f / R_i$

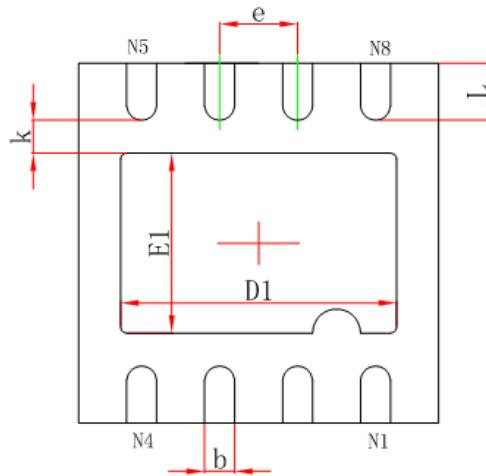

Typical $R_i=20\text{K}$ $R_f=20\text{K}$, GAIN=2; Gain depends on the values of the size of the source signal and V_{DD} . If the source signal amplitude is too small proposed increase in R_f to increase gain.
