

Ultra Low On-Resistance Low Voltage Dual SPDT Analog Switch

General Description

The LN3005 is a dual, low on-resistance, low voltage, bidirectional, single-pole/double-throw (SPDT) CMOS analog switches designed to operate from a single +1.8V to +5.5V supply. Targeted applications include battery powered equipment that benefit from low R_{ON} (0.5 Ω) and fast switching speeds ($t_{ON} = 16$ ns, $t_{OFF} = 15$ ns). The on resistance profile is very flat over the full analog signal range. This ensures excellent linearity and low distortion when switching audio signals.

The LN3005 is a committed dual single-pole/double-throw (SPDT) that consist of two normally open (NO) and two normally close (NC) switches. This configuration can be used as a dual 2-to-1 multiplexer.

Features

- Low voltage operation : 1.8 V to 5.5 V
- Low on-resistance: 0.5 Ω (TYP)
- Low on-resistance flatness
- -3 dB bandwidth: 30 MHz
- Fast switching time : $t_{on}=16$ ns , $t_{OFF}=15$ ns
- Rail-to-rail operation
- Typical power consumption (<0.01 μ W)
- TTL/CMOS compatible
- Microsize package

Applications

- Battery powered, handheld and portable equipments
- Cellular/mobile phones
