## Product Specification

## 1. General Description

The LP156WH5 is a Color Active Matrix Liquid Crystal Display. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 15.6 inches diagonally measured active display area with HD resolution (1366 horizontal by 768 vertical pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors. The LP156WH5 has been designed to apply the interface method that enables low power, high speed, low EMI. The LP156WH5 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LP156WH5 characteristics provide an excellent flat display for office automation products such as Notebook PC.

### General Features

|                          |  |
|--------------------------|--|
| Active Screen Size       | 15.6 inches diagonal   |
| Outline Dimension        | 1) Panel (W/O PCB) : 356.85(H, Typ.) × 217.25(V, Typ.) [mm]<br>2) Panel (With PCB) : 356.85 (H, Typ.) × 229.55(V, Typ.) [mm] |
| Pixel Pitch              | 0.252mm × 0.252 mm   |
| Pixel Format             | 1366 horiz. by 768 vert. Pixels RGB strip arrangement  |
| Color Depth              | 6-bit, 262,144 colors  |
| Transmittance (With POL) | 6.8 % (Typ.)   |
| Power Consumption        | Logic : 1.2W (Typ.@ Mosaic)  |
| Weight                   | 245g (Max.)  |
| Display Operating Mode   | Transmissive mode, normally white  |
| Surface Treatment        | Glare treatment (3H) of the front Polarizer  |
| RoHS Compliance          | Yes  |
| BFR / PVC / As Free      | Yes for all  |

## Product Specification

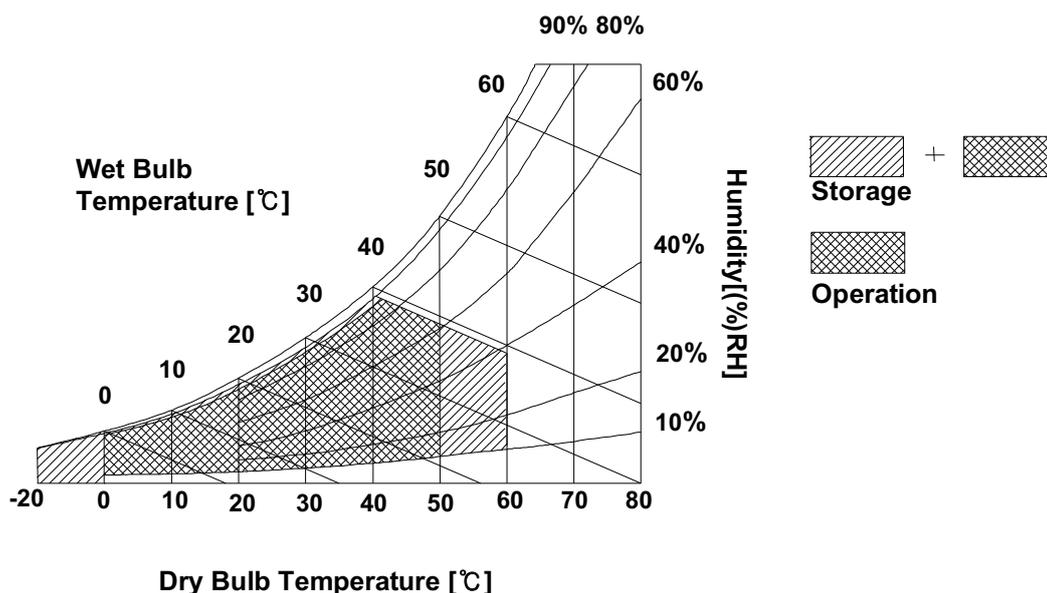

## 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

**Table 1. ABSOLUTE MAXIMUM RATINGS**

| Parameter                  | Symbol | Values |     | Units | Notes       |
|----------------------------|--------|--------|-----|-------|-------------|
|                            |        | Min    | Max |       |             |
| Power Input Voltage        | VCC    | -0.3   | 4.0 | Vdc   | at 25 ± 5°C |
| Operating Temperature      | TOP    | 0      | 50  | °C    | 1           |
| Storage Temperature        | HST    | -20    | 60  | °C    | 1           |
| Operating Ambient Humidity | HOP    | 10     | 90  | %RH   | 1           |
| Storage Humidity           | HST    | 10     | 90  | %RH   | 1           |

Note : 1. Temperature and relative humidity range are shown in the figure below.  
 Wet bulb temperature should be 39°C Max, and no condensation of water.

## Product Specification

### 3. Electrical Specifications

#### 3-1. Electrical Characteristics

The LP156WH5 requires Two power inputs. The first logic is employed to power the LCD electronics and to drive the TFT array and liquid crystal and other is output volatge of LED array.

**Table 2. ELECTRICAL CHARACTERISTICS**

| Parameter                           | Symbol            | Values |      |      | Unit | Notes |
|-------------------------------------|-------------------|--------|------|------|------|-------|
|                                     |                   | Min    | Typ  | Max  |      |       |
| LOGIC :                             |                   |        |      |      |      |       |
| Power Supply Input Voltage          | V <sub>CC</sub>   | 3.0    | 3.3  | 3.6  | V    | 1     |
| Power Supply Input Current          | I <sub>CC</sub>   | 308    | 363  | 424  | mA   | 2     |
| Power Consumption                   | P <sub>CC</sub>   | -      | 1.2  | 1.4  | W    |       |
| Power Supply Inrush Current         | I <sub>CC_P</sub> | -      | -    | 1500 | mA   | 3     |
| LVDS Impedance                      | Z <sub>LVDS</sub> | 90     | 100  | 110  | Ω    | 4     |
| LED : W/O LED Driver, 4string x 9ea |                   |        |      |      |      |       |
| LED Output Voltage                  | V <sub>OUT</sub>  |        | 28.8 | 30.6 | V    |       |
| LED Output Current                  | I <sub>OUT</sub>  |        | 80   | 82   | mA   |       |
| LED Power Consumption               | P <sub>OUT</sub>  |        | 2.3  | 2.51 | W    |       |

**PWM frequency must set typ. 340Hz for wavy noise**

Note)

- The measuring position is the connector of Board Ass'y and the test conditions are under 25°C, f<sub>v</sub> = 60Hz, Black pattern.
- The specified I<sub>CC</sub> current and power consumption are under the V<sub>CC</sub> = 3.3V, 25°C, f<sub>v</sub> = 60Hz condition.
- This Spec. is the max load condition for the cable impedance designing.
- This impedance value is needed for proper display and measured form LVDS Tx to the mating connector.  
 \*\* The below figures are the measuring V<sub>CC</sub> condition and the V<sub>CC</sub> control block LGD used.  
 The V<sub>CC</sub> condition is same as the minimum of T1 at Power on sequence.

Mosaic Pattern

## Product Specification

※ LGD recommend below Electrical Characteristics of LED Driver.

| Parameter                      | Symbol           | Values |     |      | Unit       | Notes |
|--------------------------------|------------------|--------|-----|------|------------|-------|
|                                |                  | Min    | Typ | Max  |            |       |
| BACKLIGHT : ( with LED Driver) |                  |        |     |      |            |       |
| LED Power Inrush Current       | $I_{LED\_P}$     | -      | 500 | 1000 | mA         | 7     |
| PWM Duty Ratio                 | -                | 1      | -   | 100  | %          | 8     |
| PWM Jitter                     | -                | 0      | -   | 0.2  | %          | 9     |
| PWM Impedance                  | $Z_{PWM}$        | 20     | 40  | 60   | k $\Omega$ |       |
| PWM Frequency                  | $F_{PWM}$        | 200    | 340 | 1000 | Hz         | 10    |
| PWM High Level Voltage         | $V_{PWM\_H}$     | 2.2    | -   | 5.3  | V          |       |
| PWM Low Level Voltage          | $V_{PWM\_L}$     | 0      | -   | 0.3  | V          |       |
| LED_EN Impedance               | $Z_{PWM}$        | 20     | 40  | 60   | k $\Omega$ |       |
| LED_EN High Voltage            | $V_{LED\_EN\_H}$ | 2.2    | -   | 5.3  | V          |       |
| LED_EN Low Voltage             | $V_{LED\_EN\_L}$ | 0      | -   | 0.3  | V          |       |
| Life Time                      |                  | 12,000 | -   | -    | Hrs        | 11    |

7. The current and power consumption with LED Driver are under the  $V_{led} = 12.0V$ ,  $25^{\circ}C$ , Dimming of Max luminance and White pattern with the normal frame frequency operated(60Hz).

8. The below figures are the measuring  $V_{led}$  condition and the  $V_{led}$  control block LGD used.

$V_{LED}$  control block is same with  $V_{cc}$  control block.

9. The operation of LED Driver below minimum dimming ratio may cause flickering or reliability issue. If Jitter of PWM is bigger than maximum, it may induce flickering.

10. This Spec. is not effective at 100% dimming ratio as an exception because it has DC level equivalent to 0Hz. In spite of acceptable range as defined, the PWM Frequency should be fixed and stable for more consistent brightness control at any specific level desired.

11. The life time is determined as the time at which brightness of LCD is 50% compare to that of minimum value specified in table 7. under general user condition.

### 3-6. Color Input Data Reference

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color ; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

**Table 5. COLOR DATA REFERENCE**

| Color       |            | Input Color Data |    |    |     |     |    |       |    |    |     |     |    |      |    |     |     |    |    |

## Product Specification

**3-7. Power Sequence**

**Table 6-1. POWER SEQUENCE TABLE**

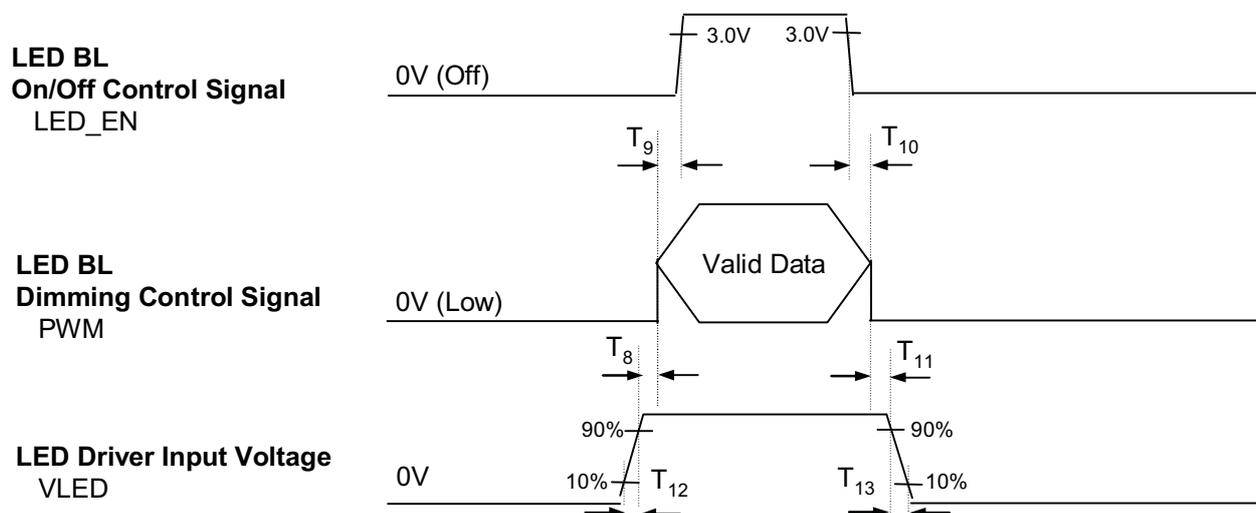

| Logic Parameter | Value |      |      | Units |
|-----------------|-------|------|------|-------|
|                 | Min.  | Typ. | Max. |       |
| T <sub>1</sub>  | 0.5   | -    | 10   | ms    |
| T <sub>2</sub>  | 0     | -    | 50   | ms    |
| T <sub>3</sub>  | 0     | -    | 50   | ms    |
| T <sub>4</sub>  | 400   | -    | -    | ms    |
| T <sub>5</sub>  | 200   | -    | -    | ms    |
| T <sub>6</sub>  | 200   | -    | -    | ms    |
| T <sub>7</sub>  | 3     | -    | 10   | ms    |

Note)

1. Do not insert the mating cable when system turn on.
2. Valid Data have to meet "3-3. LVDS Signal Timing Specifications"
3. LGD recommend the rising sequence of LED after the Vcc and valid status of LVDS turn on.

## Product Specification

※ LGD recommend below sequence of LED Driver inputs.

**Table 6-2. POWER SEQUENCE TABLE**

| LED Parameter | Value |      |      | Units |
|---------------|-------|------|------|-------|
|               | Min.  | Typ. | Max. |       |
| $T_8$         | 10    | -    | -    | ms    |
| $T_9$         | 0     | -    | -    | ms    |
| $T_{10}$      | 0     | -    | -    | ms    |
| $T_{11}$      | 10    | -    | -    | ms    |
| $T_{12}$      | 0.5   | -    | -    | ms    |
| $T_{13}$      | 0     | -    | 5000 | ms    |
|               |       |      |      |       |

Note)

1. LVDS, LED\_EN and PWM need to be on pull-down condition on invalid status.

## Product Specification

#### 4. Optical Specification\_2D

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 20 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\Theta$  equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

**FIG. 1 Optical Characteristic Measurement Equipment and Method**

**Table 7. OPTICAL CHARACTERISTICS**

※ It can be guaranteed only when B/L have sheets that LGD recommended. ( Prism & Diffuser sheet )

LP156WH5  
Liquid Crystal Display

### Product Specification

Note)

1. Contrast Ratio(CR) is defined mathematically as

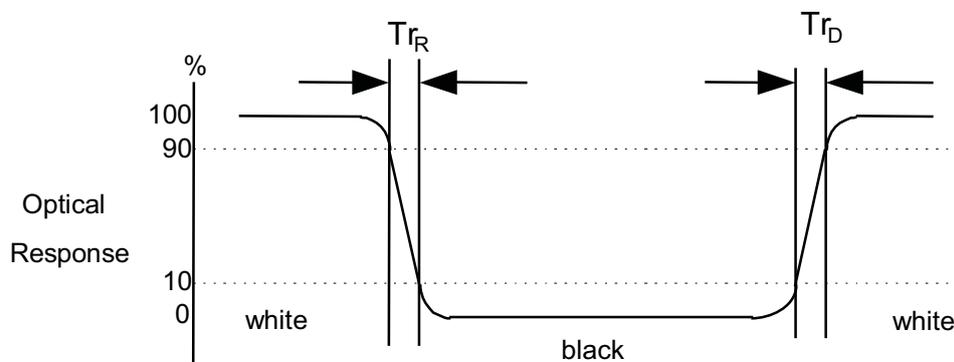

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Response time is the time required for the display to transition from white to black (rise time, TrR) and from black to white(Decay Time, TrD). For additional information see FIG 2.
3. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 3.
4. Gray scale specification \* fV = 60Hz

| Gray Level | Luminance [%] (Typ) |
|------------|---------------------|
| L0         | 0.2                 |
| L7         | 1.2                 |
| L15        | 4.8                 |
| L23        | 10.9                |
| L31        | 21.0                |
| L39        | 34.8                |
| L47        | 52.5                |
| L55        | 74.2                |
| L63        | 100.0               |

**FIG. 2 Response Time**

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

**FIG. 3 Viewing angle**

| y axis, down ( $\Phi=270^{\circ}$ ) |                     |                                       |        |     |     |                        |       |
| 3D Crosstalk (C/T)                  | -                   | Mid Axis                              | -      | 1   | 3   | %                      |       |
| 3D Watching Distance                |                     | (Center of Cone Angle)                | -      | 60  | -   | cm                     | 4-1-3 |

4-1-1. 3D luminance is measured on polarized glasses which have 35% transmittance, for TN.

4-1-2. The measure method of 3D Crosstalk .

Using below PTN(RW&LB, RB&LW, RB&LB) with filter on camera, measure the luminance (①, ②, ③).

3D C/T is defined as below.

- Measure the 3D viewing angle ; Up/Down  $1^{\circ} \pm 15^{\circ}$
- Under 10% of C/T point is called as "Cone Angle"

$$\text{3D Crosstalk} = \frac{\text{Lum}(\text{RW}\&\text{LB}) - \text{Lum}(\text{Black})}{\text{Lum}(\text{RB}\&\text{LW}) - \text{Lum}(\text{Black})} \times 100$$

FIG. 4-1 Cone Angle

\* Cone angle ( $\Theta 1+\Theta 2$ , y axis)  
: Viewing angle in condition of 3D C/T  $\leq 10\%$

4-1-3. 3D Watching Distance .

FPR 3D Watching distance is 3D operating distance which has the range of under 10% Cross talk of front panel from center (Mid Axis).

The Criteria of 3D Watching distance judges as OK if It has some area could be watched the full 3D image between 50cm to 70cm.

b) Location of Lot Mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module.  
This is subject to change without prior notice.

#### 8-2. Packing Form

a) Package quantity in one box : 20pcs

b) Box Size : 473 mm X 360 mm X 165 mm

## 9. PRECAUTIONS

Please pay attention to the followings when you use this Board ass'y.

### 9-1. Assembly PRECAUTIONS

- (1) Please attach the surface transparent protective plate to the surface in order to protect the polarizer.  
Transparent protective plate should have sufficient strength in order to resist external force.
- (2) You should adopt radiation structure to satisfy the temperature specification.
- (3) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (4) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.  
Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (5) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (6) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (7) Do not open the case because inside circuits do not have sufficient strength.
- (8) Mechanical structure for backlight system should be designed for sustaining board ass'y safely.

### 9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)  
And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (7) Please do not give any mechanical and/or electrical impact to board ass'y. Otherwise, it can't be operated its full characteristics perfectly.

### 9-3. ELECTROSTATIC DISCHARGE CONTROL

Board ass'y is composed of electronic circuits, so it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch drive IC directly.

Panel ground path should be connected to metal ground.

### 9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

### 9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.  
It is recommended that they be stored in the container in which they were shipped.

### 9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer.  
This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.  
Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the Board ass'y with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
