

1.5MHz Step-up DC/DC Converter

General Description

The LP3301 is a 1.5MHz PWM boost switching regulator designed for constant-Voltage driver applications.

The LP3301 implements a constant frequency 1.5MHz PWM control scheme. The high frequency PWM operation also saves board space by reducing external component sizes. To improve efficiency, the feedback voltage is set to 1.25V.

Highly integration and internal compensation network minimizes as 5 external component counts. Optimized operation frequency can meet the requirement of small LC filters value and low operation current with high efficiency.

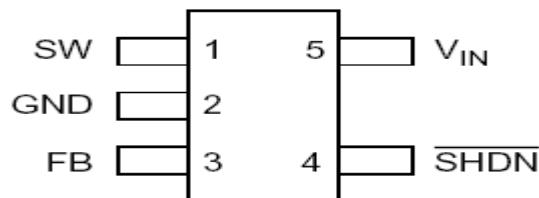

Ordering Information

LP3301
 F:Pb-Free
 Package Type
 B5: SOT-23-5

Features

- ◆ High Efficiency: 85%
- ◆ 1.5MHz Fixed-Frequency PWM Operation
- ◆ 36V 500mA Integrated switch
- ◆ Shutdown Supply Current:<1uA
- ◆ Available in SOT23-5 Package
- ◆ Built-in Over Voltage Protection of 29V
- ◆ Minimize the External Component
- ◆ RoHS Compliant and 100% Lead (Pb)-Free

Pin Configurations

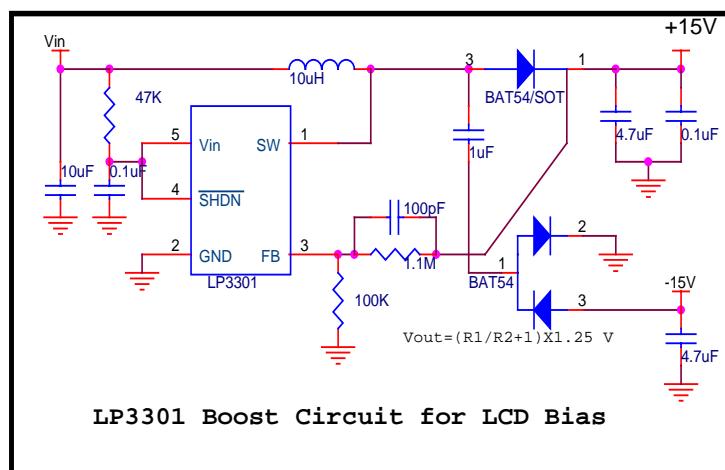

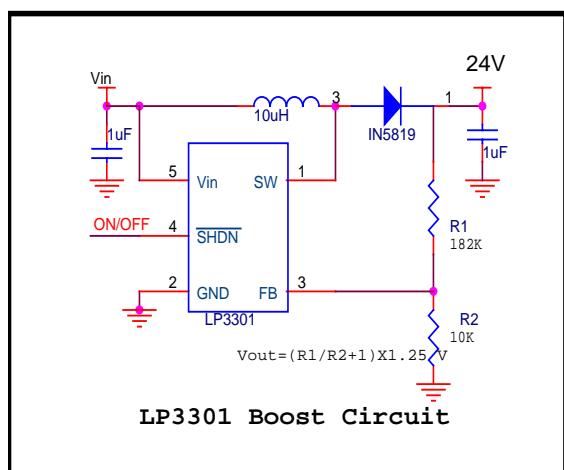

Applications

- ◇ LCD Bias Supply
- ◇ OLED Driver
- ◇ GPS/PDA/Mobile phone

Functional Pin Description

SOT-23-5	Pin Name	Pin Function
1	SW	Switch Pin. Connect this Pin to inductor and catch diode. Minimize the track area to reduce EMI.
2	GND	Ground Pin
3	FB	Feedback Reference Voltage Pin. Connect R1 and R2 resistor divider here. Calculate the Output Voltage according to the formula: $V_{out} = 1.25 \times (1 + R1/R2)$.
4	SHDN	Chip Enable (Active High). Voltage sensing input to trigger the function of over voltage protection. Note that this pin is high impedance. There should be a pull low $100k\Omega$ resistor connected to GND when the control signal is floating.
5	VIN	Supply Input Voltage Pin. Bypass $1\mu F$ capacitor to GND to reduce the input noise.
