Express written permission is also required before any use of this publication may be made by a third party.

The application circuit examples in this publication are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for use in general electronic equipment designs, such as:

- Automotive auxiliary information display
- Automotive audio visual equipment

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment(i.e., aircraft, trains, automobiles, etc.)
- Traffic signals           • Gas leakage sensor breakers
- Alarm equipment           • Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications           • Nuclear power control equipment
- Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of this publication.

These specification sheets are the proprietary product of SHARP CORPORATION ("SHARP") and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose in whole or in part, without the express written permission of SHARP.

The device listed in these specification sheets was designed and manufactured for use in general electronic equipment.

In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.

SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.

Contact and consult with SHARP sales representative for any questions about this device.

1. Application

This specification applies to color TFT-LCD module, LQ057Q3DC02.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit and a backlight unit. Graphics and texts can be displayed on a 320×3×240 dots panel with 262,144 colors by supplying 18 bit data signal (6bit/color), four timing signals.

The TFT-LCD panel used for this module is a low-reflection and higher-color-saturation type. Therefore, this module is also suitable for the multimedia use. Viewing angle is 12 o'clock direction. This module is the type of wide viewing angle and high brightness 350cd/m<sup>2</sup>. This module has horizontal display mode and vertical display mode.

Backlight-driving DC/AC inverter is not built in this module.

7-2. Backlight driving

The backlight system is an edge-lighting type with single CCFT (Cold Cathode Fluorescent Tube).

The characteristics of single lamp are shown in table 7-2.

Table 7-2

$T_a=25^{\circ}C$

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark

	$T_a=-30^{\circ}C$	—	—	(1470)	Vrms	

(Inverter : HIU-288 [Output Condenser 22pF] Harison Electric co.,LTD.)

【Note7-6】 Lamp frequency may produce interference with horizontal synchronous frequency, and this may cause beat on the display. Therefore lamp frequency shall be detached as much as possible from the horizontal synchronous frequency and from the harmonics of horizontal synchronous to avoid interference. In case of such an usage under the lower temperature environment, periodical lamp exchange is recommended.

8. Timing Characteristics of input signals

Timing diagrams of input signal are shown in Fig.8.

Note) In case of lower frequency, the deterioration of the display quality, flicker etc., may occur.

8-2. Horizontal display position

The horizontal display position is determined by ENAB signal .

Table 8-2

Parameter		symbol	Min.	Typ.	Max.	Unit	Remark

Note) When ENAB is fixed at "V/Q=Low", the display starts from the data of C52 (clock) as shown in Fig.8.

When ENAB is fixed at "V/Q=High", the display starts from the data of C104 (clock) as shown in Fig.8.

8-3. Vertical display position

The vertical display position (TVs) is fixed at 34<sup>th</sup> line (V/Q=H) and 7<sup>th</sup> line (V/Q=L).

Note) ENAB signal is independent of Vertical display position.

(Harison Electric co.,LTD.)

Optical characteristics measurement method

**【Note 10-1】** Definition of viewing angle range

**【Note 10-2】** Definition of contrast ratio

The contrast ratio is defined as follows.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

**【Note 10-3】** Definition of response time :

The response time is defined as the following figure and shall be measured by switching the input signal for “black” and “white”.

**【Note 10-4】** This shall be measured at the center of the screen. The measurement was done 30 min later after switching on the backlight. ( characteristic of the first stage )

Inverter drive frequency : (49) kHz

**【Note 10-5】** Continuous operation time which doesn't deteriorate the brightness under 50% of the brightness at the beginning.

(Condition) IL=5.0 mArms (adjusting the brightness by current)

## 11. Handling Precautions

### 11-1. Installing the TFT-LCD module

①TFT-LCD module has holes at the corner of the reverse side of the module to install. M3 tapping screw is recommended. (torque : 0.25 ~ 0.30 N·m )

Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.

Be sure to design the cabinet so that the any switch doesn't press the module directly.

②Be sure to turn off the power supply when inserting or disconnecting the cable.

③Connect GND of Inverter to the metal sealed case of the module.

If the connection is not sufficient, it may cause the followings,

- a) Increasing of noise from back light.
- b) Unstable inverter output.
- c) Partial heating up.

### 11-2. Installation of the TFT-LCD module

#### Installation Precautions

①Since the front polarizer is easily damaged, pay attention to avoid rubbing with something hard or sharp.

Please use ionized nitrogen to blow particle off. When polarizer is soiled, wipe out with cloth for lenses.

②When the metal parts of TFT-LCD module (shield case ) becomes dirty, wipe it out dry and soft cloth. If it cannot be removed easily, blow your breath on it and wipe it out.

③Wipe off water drop immediately. Long contact with water may cause discoloration or spots.

④Since TFT-LCD modules consist of glass and refined wires and components, it may break, crack or internal wire breaking if dropped or bumped on hard surface. Handle with care.

⑤Since CMOS LSI is used in this module, take care of static electricity and injure the human GND, when handling.

### 11-3. Notice for the design of products

①Design the product to keep TFT-LCD module from sodium chloride or water.

②Consider a sufficient counter measure for EMI from LCD module to application, when designing.

### 11-4. Others

①Liquid-crystal is deteriorated by ultraviolet rays. Do not leave it in the direct sun light and strong ultraviolet rays for many hours.

②If it is kept at a temperature below the rated storage temperature, it becomes coagulated and the panel may be broken. Also if it is isotropic liquid and does not return to its original state. Therefore, it is desirable to keep it at room temperature as much as possible.

③Kick-off voltage of back light may be required over rated voltage, due to the leakage current from the lamp cable.

- ④ When the LCD is broken, liquid-crystal may leak from the panel. Use care so that it does not enter your eyes and mouth. If it gets on hands, legs, and clothes, wash it away immediately, using soap.
- ⑤ Follow the general precautions for ordinary electronic parts.

## 12. Packing form

- ① Piling number of cartons : MAX. (undecided)
- ② Package quantity in one carton : pcs. (undecided)
- ③ Carton size : (W) × (D) × (H) mm (undecided)
- ④ Total mass of 1 carton filled with full modules : kg (undecided)
- ⑤ Conditions for storage
  - Temperature : 0~40°C
  - Humidity : 60%RH or less
  - Atmosphere : Harmful gas, such as acid or alkali which bites electronic components and /or wires , must not be detected.
  - Period : about 3 months
  - Opening of the package : In order to prevent the LCD module from break down by electrostatic charges, Please control the room humidity over 50%RH and open the package taking sufficient countermeasures against electrostatic charges, such as earth, etc..

## 13. Others

- ① As the volume of the LCD-module is adjusted correctly, do not change the adjustment. If the adjustment is changed, the LCD-module may not satisfy the specification.
- ② Do not break up the LCD-module to prevent the trouble.
- ③ Static image displayed for long time may cause residual image.
- ④ TFT-LCD drive input and output connector (33 pins Kyocera elco corporation :08-6210-033-340-800)
  - a) Adapted FPC
  - b) Holding power of the terminal : 0.9 N/pin or over  
(pulling out each terminal at 25±3 mm/min)
  - c) Durability against inserting and extracting  
: Double of the beginning data or less  
(Difference of the contact resistance after 20 times of inserting and extracting, using adapted FPC.)

Table 13-1

Number	Name	Material
1	Base	Polyimide or the same kind of material ( $25 \mu\text{m}$ thickness)
2	Copper layer	Thin Copper film ( $35 \mu\text{m}$ thickness) Solder plating $2 \mu\text{m}$ or more
3	Cover layer	Polyimide or same kind of material
4	Support board	Polyester, Polyimide or the same kind of material ( $188 \mu\text{m}$ thickness)

FPC adapted to Input output connector (  $0.5$  mm pitch)

14. Conditions of Reliability tests

5	Low temperature operation test	Ta=-10°C 240h Lamp endurance is excepted.
6	Electro static discharge test	±200V, 200pF (0Ω) 1 time for each terminal.
7	Shock test (non- operating)	Max. gravity : 490m/s <sup>2</sup> •6ms Direction : ±X, ±Y, ±Z 3 times for each direction. (JIS C0041)
8	Vibration test (non- operating)	Frequency : 5~57Hz/Vibration width : 0.15 mm : 58~500Hz/Acceralation: 9.8m/s <sup>2</sup> Sweep time : 11 minutes Test period : 3 hours (1 hours in each direction of X,Y,Z)
9	Heat shock test	Ta = -30 °C ~ +80°C / 100 cycles (0.5h) (0.5h)

**【Result Evaluation Criteria】**

Under the display quality test conditions with normal operation state, these shall be no change, Which may affect practical display function.

(This condition is the target specification on the mass production. It may not satisfy this specification on test sample.)

**【Note】**The following figure shows the definition of X axis. Y axis. Z axis.
