

Dual Differential Comparators

DESCRIPTION:

The LR393 consists of two independent voltage comparators with an offset voltage specification as low as 2.0mV max. for two comparators which were designed specifically to operation from a single power supply over a wide range of voltages. Operate from split power supplies is also possible, and the low power supply current drain is independent of the magnitude of the power supply voltage. These comparators also have a unique characteristic in that the input common-mode voltage range includes ground, even though operated from a single power supply voltage.

SOP-8

FEATURE:

- Wide supply voltage range: single supply operation: 2V to 36V, dual supply operation: $\pm 1V$ to $\pm 18V$
- Very low supply current drain (0.8mA) independent of supply voltage(2.0mW/comparator at 5.0 Vdc)
- Low input biasing current: 25nA
- Low input offset current: 5.0nA; Low input offset voltage: 5.0mV
- Input common-mode voltage range includes ground
- Differential input voltage range equal to the power supply voltage
- Output voltage compatible with TTL,DTL,ECL,MOS and CMOS logic systems.

APPLICATION CIRCUIT

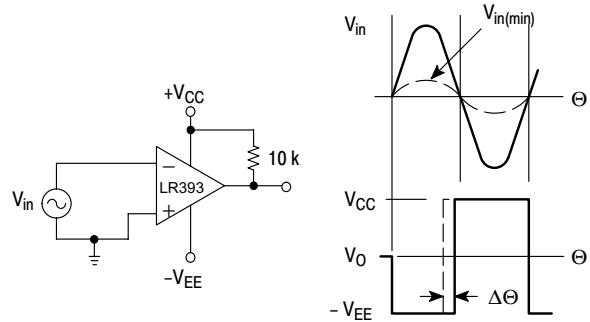

D1 prevents input from going negative by more than 0.6 V.

$$R_1 + R_2 = R_3$$

$$R_3 \leq \frac{R_5}{10} \text{ for small error in zero crossing.}$$
