

### 600mA LOW DROPOUT LINEAR REGULATOR

#### DESCRIPTION

The UTC LR9211 is a high speed LDO regulator that features high accurate, low noise, high ripple rejection, low dropout and low power consumption. Designed with a P-channel MOSFET series pass transistor, the UTC LR9211 yields extremely low dropout voltage and maintains very low ground current (70µA).

The UTC LR9211 does not require a bypass capacitor, hence achieving the smallest PCB area.

Other features include foldback overcurrent protection, quick soft start, and overtemperature protection. The UTC LR9211 is available in fixed output voltage from 0.8V to 3.3V with 0.1V per step or as an adjustable device with a 0.8V reference voltage. The device comes in various packages.

SOT-25

#### FEATURES

- \* Wide Input Voltage Range from 2.5V to 5.5V
- \* Ultra Low Dropout Voltage: 200mV @  $V_{OUT}=3.3V, 300mA$
- \* Ultra Fast Response in Line/Load Transient
- \* Stable with 1µF Ceramic Output Capacitor
- \* Low Ground Current: 70µA Typical
- \* Low Shutdown Current: < 1µA
- \* Foldback Output Current Limit
- \* High Output Accuracy
  - 1.5% Initial Accuracy
  - Fixed Output Voltages: 0.8V~3.3V
  - Adjustable Output Voltage from 0.8V to 4.5V
- \* Over-Temperature Protection

#### ORDERING INFORMATION

| Ordering Number  |                  | Package | Packing   |
|------------------|------------------|---------|-----------|
| Lead Free        | Halogen Free     |         |           |
| LR9211L-xx-AF5-R | LR9211G-xx-AF5-R | SOT-25  | Tape Reel |

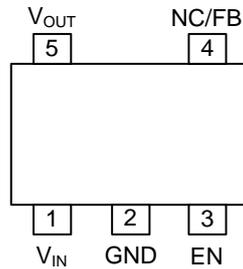

Note: xx: Output Voltage, refer to Marking Information.

## PIN CONFIGURATION

## PIN DESCRIPTION

| PIN NO. | PIN NAME         | DESCRIPTION  |
|---------|------------------|--|
| 1       | V <sub>IN</sub>  | Input Voltage. This pin connects to the source of the internal pass transistor that supplies current to the output pin. Bypass VIN to GND with a minimum 1uF ceramic capacitor. Place the decoupling capacitor physically as close as possible to the device.  |
| 2       | GND              | Ground.  |
| 3       | EN               | Enable Input. Pulling this pin below 0.35V turns the regulator off, reducing the quiescent current to a fraction of its operating value. This pin is not available for 3-pin packages.   |
| 4       | FB/NC            | Feedback Pin(ADJ Version). this pin is connected to an external resistor divider, turns to adjustable output voltage; $V_{OUT}=0.8*(R1+R2)/R1(V)$ ; NC Pin(fixed version);   |
| 5       | V <sub>OUT</sub> | Output Voltage. This pin is power output of the device. A pull low resistance exists when the device is disabled by pulling low the EN pin. To maintain adequate transient response to large load change, a minimum 1uF ceramic capacitor is required to reduce the effects of current transients on VOUT. |

■ BLOCK DIAGRAM

### ■ ABSOLUTE MAXIMUM RATING

| PARAMETER                                      | SYMBOL    | RATINGS                 | UNIT               |
|--|-----------|-------------------------|--------------------|
| Supply Input Voltage (Note 1)                  | $V_{IN}$  | -0.3 ~ +6               | V                  |
| Other Pins                                     |           | -0.3 ~ ( $V_{IN}+0.3$ ) | V                  |
| Power Dissipation ( $T_A=25^{\circ}\text{C}$ ) | $P_D$     | 0.4                     | W                  |
| Junction Temperature                           | $T_J$     | +150                    | $^{\circ}\text{C}$ |
| Storage Temperature Range                      | $T_{STG}$ | -65 ~ +150              | $^{\circ}\text{C}$ |

Note: Absolute maximum ratings are those values beyond which the device could be permanently damaged.  
Absolute maximum ratings are stress ratings only and functional device operation is not implied.

### ■ THERMAL DATA
