

LINEAR INTEGRATED CIRCUITS

FREQUENCY COMPENSATED OPERATIONAL AMPLIFIERS

- LOW OFFSET CURRENT AND VOLTAGE
- LOW INPUT CURRENT
- GUARANTEED DRIFT CHARACTERISTICS

The LS 107 series consists of general purpose operational amplifiers, with the frequency compensation built into the chip. They replace pin-to-pin the LS 709, LS 101, LS 141 and LS 148.

The LS 107 series offers features similar to the LS 101A, providing better accuracy and lower noise in high impedance circuits. The low input currents allow the device to be used in slow charge applications, such as long interval integrators, slow ramps, sample and hold circuits.

The LS 107 series is available with hermetic gold chip (8000 series), particularly suitable for professional and telecom applications, wherever very high MTBF are required.

2) The short circuit duration is limited by thermal dissipation
