General Description

Description

This model uses a liquid crystal display (LCD) of amorphous silicon TFT as switching components. This model is composed of a TFT LCD panel, a driver circuit, and an ass'y KIT of source PBA. This 55.0" model has a resolution of a 1920 x 1080 and can display up to 16.7 million colors with the wide viewing angle of 89° or a higher degree in all directions. This panel is designed to support applications by providing a excellent performance function of the flat panel display such as home-alone multimedia TFT-LCD TV and a high definition TV.

General Information

Features

- RoHS compliance (Pb-free)
- High contrast ratio & aperture ratio with the wide color gamut
- SVA(Super vertical align) mode
- Wide viewing angle (±178°)
- High speed response
- FHD resolution (16:9)
- Low power consumption
- DE (Data enable) mode
- The interface 4ch LVDS (Low voltage differential signaling)

| Items | Specification | Unit | Note |
|----------------------|---|-------|--------|
| Active Display Area | 1209.6(H) x 680.4(V) | mm | |
| Switching Components | a-Si TFT Active matrix | | |
| Glass Size | TFT: 1227.6(H) x 700.6(V) CF: 1222.4(H) x 697.9(V) | mm | ±0.4mm |
| Panel Size | 1227.6(H) x 700.6(V) | mm | ±0.4mm |
| r dilei eize | 1.8(D) | mm | ±0.1mm |
| Weight | 3400 | g | |
| Display Colors | 16.7M (True Display) 1.07B (Dithered 10bit) | color | |
| Number of Pixels | 1,920 × 1,080 | pixel | 16 : 9 |
| Pixel Arrangement | RGB Vertical Stripe | | |
| Display Mode | Normally Black | | |
| Surface Treatment | 7G Anti Glare | | |
| Haze | 2.3% | | |
| Hardness | 2H | | |

1. Absolute Maximum Ratings

If the figures on measuring instruments exceed maximum ratings, it can cause the malfunction or the unrecoverable damage on the device.

| Item | Symbol | Min. | Max. | Unit | Note |
|---------------------------------|-------------------|------|------|------|---------|
| Power supply voltage | V _{DD} | 10.8 | 13.2 | V | (1) |
| Temperature for storage | T _{STG} | -20 | 65 | °C | (2),(4) |
| Temperature of glass surface | T _{OPR2} | 0 | 65 | °C | (2) |
| Operating temperature | T _{OPR} | 0 | 50 | °C | (2),(5) |
| Humidity for storage | H _{STG} | 5 | 95 | %RH | (2),(4) |
| Operating humidity | H _{OPR} | 20 | 95 | %RG | (2),(5) |
| Endurance on static electricity | | | 150 | V | (3) |

Note (1) The power supply voltage at Ta= 25 ± 2 °C

- (2) Temperature and the range of relative humidity are shown in the figure below.
 - a. 95 % RH Max. (Ta ≤ 39 °C)
 - b. The relative humidity is 95% or less. (Ta > 39 °C)
 - c. No condensation
 - d. Operating condition with SET
- (3) Keep the static electricity under 150V in Polarizer attaching process.
- (4) Operating condition with source PCB
- (5) Storage temperature condition including glass
- (6) Condition without packing. (Unpacking condition)

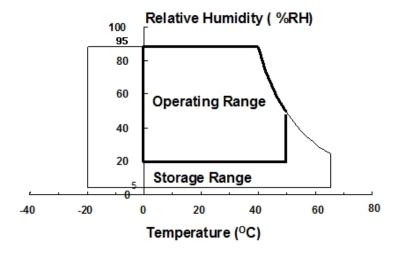

Fig. Range for temperature and relative humidity

2. Optical characteristics

The optical characteristics should be measured in the dark room or the space surrounded by the similar setting.

Measuring equipment : TOPCON RD-80S, TOPCON SR-3 ,ELDIM EZ-Contrast

(Ta = 25 ± 2°C, VDD=12.0V, fv=60Hz, f_{DCLK}=148.5MHz, Light source: D65 Standard light)

Notice

(a) Setup for test equipment

The measurement should be executed in a stable, windless, and dark room for 40min and 60min after operating the panel at the given temperature for stabilization of the standard light. (SDC uses the standard luminance of the D65 media).

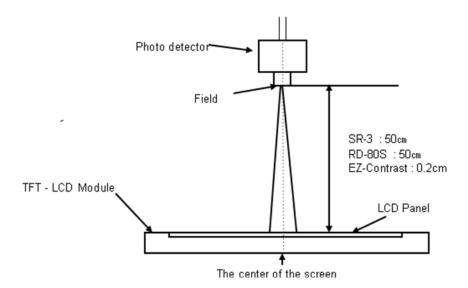

This measurement should be measured at the center of screen.

The environment condition: Ta = 25 ± 2 °C

(b) D65 media has the general light source.

The temperature of color is 6847K. The coordinate of color is Wx 0.313, Wy 0.329 The luminance of this product is 7217cd/m².

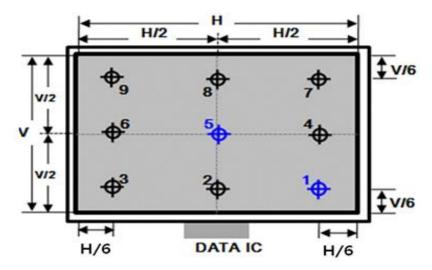

| Photo detector | Field |
|----------------|-------|
| SR-3 | 2°/1° |
| RD-80S | 1° |

(c) The CIE positions D65 as the standard daylight illuminant:

[D65] is intended to represent average daylight and has a correlated color temperature of approximately 6500 K. CIE standard illuminant D65 should be used in all colorimetric calculations requiring representative daylight, unless there are specific reasons for using a different illuminant.

- Definition of the test point

MODEL LSC550HJ03-W Doc. No Page 6 / 42

Note (1) Definition of contrast ratio (C/R)

: The ratio of White luminance (Lw) & Black luminance (Lk) at the center point ⑤ of the panel

$$C/R = \frac{L_W}{L_K}$$

Lw: The White luminance with Gmax Lk: The Black luminance with Gmin

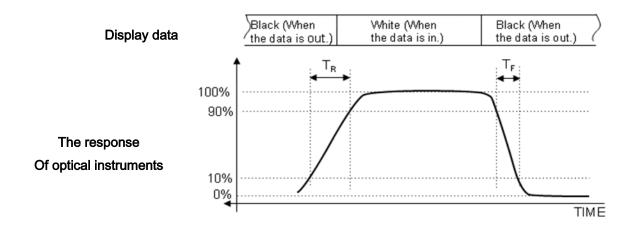

Note (2) Definition of the White luminance uniformity of 9 points (Test pattern : The full white)

The measurement shall be executed with the standard light unit.

$$L_{\text{w_uni.}} = \frac{\left(L_{\text{w (max)}} - L_{\text{w (min)}}\right)}{L_{\text{w (max)}}}$$

Lw (max): The maximum white luminance Lw (min): The minimum white luminance

Note (3) Definition of the response time: Sum of Tr, Tf

※ G-to-G: Average response time between whole gray scale to whole gray scale.

The response time is the value that was measured after it was operated in Samsung's standard BLU for one hour.(at room temperature)

Note (4) The definition of luminance of white: The luminance of white at the center point ⑤

The measurement shall be executed with the standard light source.

The Value is calculated to apply the spectral power distribution data of Samsung's standard BLU.

Note (5) The definition of chromaticity (CIE 1931)

The color coordinate of red, green, blue and white at the center point ⑤

The measurement shall be executed with the standard light source.

MODEL LSC550HJ03-W Doc. No Page 7 / 42

The chromaticity coordinates(CIE1931) is calculated using the spectrum data of Samsung's Standard BLU.

① Calculate the spectral transmittance of the panel

The spectral transmittance Panel

$$= \frac{The Spectrum_{Panel+LihtSource}}{The Spectrum_{Lightsoure}}$$

- ② Calculate the spectral power distribution data (with Samsung's standard BLU)
 - → Module = SDC's Panel + Samsung's standard BLU

TheSpectral Power Module

= The spectral transmit tan $ce_{Panel} \times Spectrum_{Customer's BLU}$

3 Calculate three stimulus value X,Y,Z

 $X = The Spectral Power_{Module} \times CIE X filter spectrum$

Y = The Spectral Power $_{Module} \times CIEY$ filter spectrum

 $Z = The \ Spectral \ Power \ _{Module} \times CIE \ Zfilter \ spectrum$

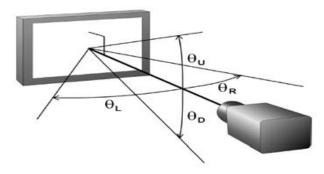

④ Calculate the CIE 1931 chromaticity coordinates

$$x = \frac{X}{X + Y + Z}, \quad y = \frac{Y}{X + Y + Z}$$

Note (6) Definition of viewing angle

: The range of viewing angle (C/R ≥10)

The measurement shall be executed with the standard light unit or Samsung's standard BLU. .

MODEL LSC550HJ03-W Doc. No Page 8 / 42

Note (7) Definition of the transmittance

The measurement shall be executed with the standard light unit. .

The Value is calculated to apply the spectral power distribution data of the D65.

Note (8) Definition of the transmittance uniformity of 9 points (Test pattern: The full white)

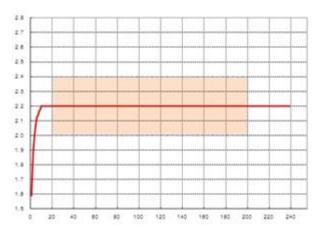

The measurement shall be executed with the standard light unit.

The transmittance of each point is calculated to same method.

$$T_{uni.} = \frac{(T_{max} - T_{min})}{T_{max}}$$

Tmax: The maximum Transmittance
Tmin: The minimum Transmittance

Note (9) Management Criteria of Gamma Value

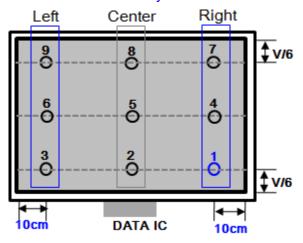

Gamma Value

- 20 ~ 200Gray: 2.2 ±0.2

Note (10) 5nit Low Gray Uniformity

The 5nit uniformity is defined as the maximum value.

Leftpoint:3,6,9 Centerpoint:2,5,8

Rightpoint:1,4,7

$$L_{5nit_uni.} = \frac{L_{(Left / Right)} - L_{(Center)}}{L_{Center}} (at horizontal line)$$

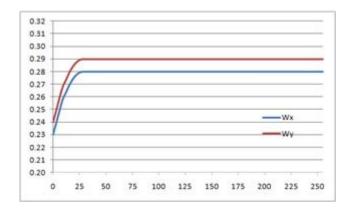

MODEL LSC550HJ03-W Doc. No Page 9 / 42

Note (11) Gamma Variation between Center and Left (or Right)

Gamma measured at 10cm point from the left & right side is more less than 0.1 than Gamma measured at Center

(Gamma measured at 10cm of the P-4 & P-6 is more less than 0.1 than Gamma measured at P-5)

Note (12) Management Criteria of ACC Linearity

255Gray Wx/Wy value basis (a module unit basis)

- a. Color coordinate differences are less than 15/1,000 at Any Point above 30Gray and 255Gray
- b. When Wx/Wy coordinates reverse at 0Gray, it permits an once intersection under, 30Gray

Note (13) White Color Coordinate Uniformity of 9 points (Test pattern: The full white)

Wx, uni = Wx max-Wx min

Wx max : The maximum Wx Wx min : The minimum Wx

Wy, uni = Wy max-Wy min

Wy max: The maximum Wy Wy min: The minimum Wy

MODEL LSC550HJ03-W Doc. No Page 10 / 42

3. Electrical characteristics - Sony Model Attached Reference file

3.1 TFT LCD Module

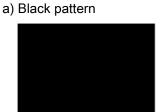

The connector for the display data & timing signal should be connected.

 $Ta = 25^{\circ}C \pm 2^{\circ}C$

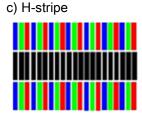

| | Item | Symbol | Min. | Тур. | Max. | Unit | Note |
|-------------------------------|-------------------|-----------------|------|------|------|------|---------|
| Voltage | e of power supply | V _{DD} | 10.8 | 12.0 | 13.2 | V | (1) |

Note) The definition of gray:

Rn : Red gray, Gn : Green gray, Bn : Blue gray (n = Gray level) Input signal : 0 = Low level voltage, 1 = High level voltage

6. Interface timing

6.1 The parameters of timing (Only DE mode)

| SIGNAL | ITEM | SMBOL | MIN. | TYP. | MAX. | Unit | NOTE |
|-------------------------|-----------------------------|------------------|------|------|------|--------|------|
| Clock | | 1/T _c | | 297 | | MHz | - |
| Hsync | Frequency | F _H | | 135 | | KHz | - |
| Vsync | | F_v | | 120 | | Hz | - |
| Term for the vertical | Active display period | T_{VD} | - | 1080 | - | Lines | - |
| display | Total vertical | T_V | | 1125 | | Lines | - |
| Term for the horizontal | Active display period | T _{HD} | - | 1920 | - | Clocks | - |
| display | Total Horizontal | T _H | | 2200 | | clocks | - |

Note) These products don't have to receive the signal of Hsync & Vsync from the input device.

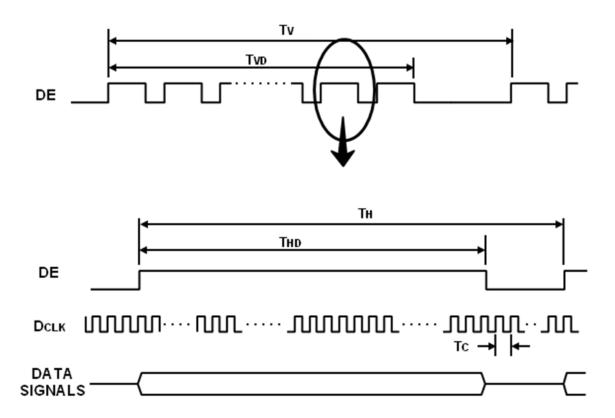

- (1) Key points when testing: TTL controls the signal and the CLK at the input terminal of LVDS Tx of the system.
- (2) Internal VDD = 3.3V
- (3) Spread spectrum

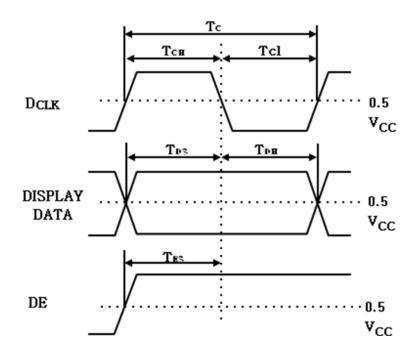

- The limit of spread spectrum's range of SET in which the LCD module is assembled should be within \pm 3 %.

6.3 Characteristics of Input data of LVDS

| ITEM | | SYMBOL | Min. | Тур. | Max. | UNIT | NOTE |
|-----------------------------|------------------------|-------------------|------|------|------|------|-------------------------|
| Differential in threshold v | | VTH | - | - | +100 | mV | V = 1.2V |
| Differential in threshold v | • | VTL | -100 | - | - | mV | V _{CM} = 1.2V |
| Input common m | ode voltage | V _{CM} | 0.2 | 1.2 | 2.0 | V | - |
| Differential Inpu | ut Voltage | V _{ID} | 100 | - | 600 | mV | V _{ID} =100mV |
| Innut data position | E -80MH- | t _{RSRM} | - | - | 450 | ps | |
| Input data position | F _{IN} =80MHz | t _{RSLM} | -450 | - | | ps | |

Notice The spread spectrum should be 0% when the skew is measured.

Position of a measurement is T-CON LVDS input pin

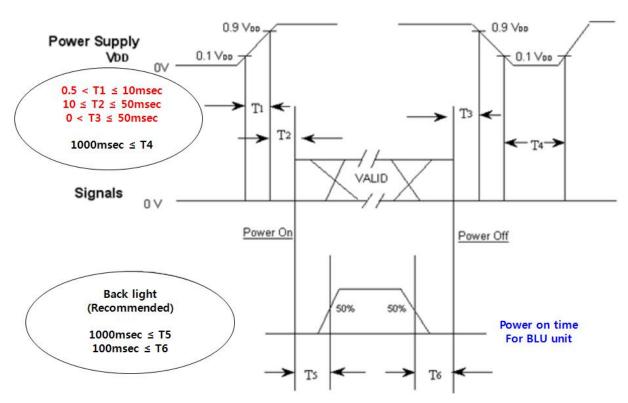

MODEL LSC550HJ03-W Doc. No Page 21 / 42

6.4 The sequence of power on and off - Sony Model attached Reference file

To prevent a latch-up phenomena or the DC operation of the LCD Module, the power on/off sequence should be accorded with the settings described in the diagram below.

- T1: The V_{DD} rising time from 10% to 90%
- T2 : The time from the point which V_{DD} reach to 90% of voltage to the point which the valid data is out_when the power is on.
- T3: The time from the point which the valid data is out to the point which V_{DD} reach to the 90% of voltage when the power is off.
- T4: the time from the point which the Vdd decrease to the point which the Vdd increase again for windows to restart.
- * The recommended operating condition of the back light system
- T5: The time which takes for B/L to be turned on after the signal is entered when the time is on.
- T6: The time which takes until the signal is out after BL is turned off
- The condition of supply voltage to enter in the module from the external system should have the same condition as the definition of V_{DD}.
- Apply the voltage for the lamp within the range which the LCD operates. when the back light is turned on before the LCD is operated or when the LCD is turned off before the back light is turned off, the display may show the abnormal screen momentarily.
- While the V_{DD} is off level, please keep the level of input signals low or keep a high impedance condition.
- The figure of T4 should be measured after the module has been fully discharged between the periods when the power is on and off.
- The interface signal must not keep the high impedance condition when the power is on.

7. Outline dimension

7.1 The adhesive size of POL

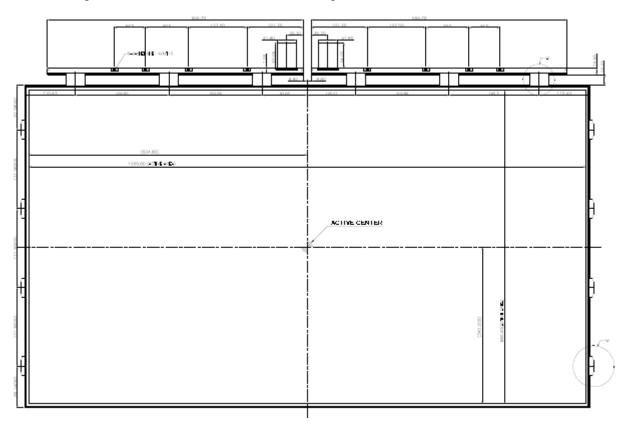

The next figure shows the size of POL on the drawing sheet attached to the panel for BLU design.

<Figure.>

The POL size of CF: 1220.8 X 695.45 ± 0.2mm
The POL size of TFT: 1220.4 X 695.45 ± 0.2mm
The total adhesion allowance of POL is ± 0.5mm

[Criteria on evaluation]

There should be no change of the product, which may affect to the practical display functions, when the display quality test is executed under the normal operation setting.

- * HTOL/ LTOL: The operating cycle on the high and low temperature
- * THB : Temperature humidity slant
- * HTS/LTS: The storage at the high and low temperature
- * WHTS: The storage in the high temperature with the high humidity

MODEL LSC550HJ03-W Doc. No Page 24 / 42

9. General precautions

9.1 Handling

- (a) When the panel kit and BLU kit are assembled, the panel kit and BLU kit should be attached to the set system firmly by combining each mounted holes. Be careful not to give the mechanical stress.
- (b) Be careful not to give any extra mechanical stress to the panel when designing the set, and BLU kit.
- (c) Be cautious not to give any strong mechanical shock and / or any forces to the panel kit. Applying the any forces to the panel may cause the abnormal operation or the damage to the panel kit and the back light unit kit.
- (d) Refrain from applying any forces to the source PBA and the drive IC in the process of the handling or installing to the set. If any forces are applied to the products, it may cause damage or a malfunction in the panel kit.
- (e) Refrain from applying any forces which cause a constant shock to the back side of panel kit, the set design and BLU kit. If any forces are applied to the products, it may cause an abnormal display, a functional failure and etc.
- (f) Note that polarizer could be damaged easily.

 Do not press or scratch the bare surface with the material which is harder than a HB pencil lead.
- (g) Wipe off water droplets or oil immediately. If you leave the droplets for a long time on the product, a staining or the discoloration may occur.
- (h) If the surface of the polarizer is dirty, clean it using the absorbent cotton or the soft cloth.
- (i) Desirable cleaners are water or IPA (Isopropyl Alcohol).

 Do not use Kenton type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride.

 These might cause the permanent damage to the polarizer due to chemical reaction.
- (j) If the liquid crystal material leaks from the panel, this should be kept away from the eyes or mouth. If this contacts to hands, legs, or clothes, you must washed it away with soap thoroughly and see a doctor for the medical examination.
- (k) Protect the panel kit and BLU Kit out of the static electricity. Otherwise the circuit IC could be damaged.

- Reference : Process control standard of SDC

| No. | Item | Control standard | | |
|-----|--------------------------------|---|--|--|
| 1 | Ionizer | All Equipment should be controlled under 150V.(Typ. 100V) | | |
| 2 | Carrying Roller | Carrying Roller should be controlled under 200V. | | |
| 3 | Equipment Ground Resistance | All Equipment Ground Should be less than 10hm. | | |

MODEL LSC550HJ03-W Doc. No Page 25 / 42

- (I) Remove the stains with finger-stalls wearing soft gloves in order to keep the display clean in the process of the incoming inspection and the assembly process.
- (m) Do not pull or fold the source drive IC which connects to the source PBA and the panel or the gate drive IC.
- (n) Do not pull, fold or bend the source drive IC and the gate drive IC in any processes.
 If not, the source drive IC could be bent one time in the process of assembling the panel Kit and the BLU Kit.
- (o) Do not adjust the variable resistor located on the panel kit and BLU kit except when adjusting the flicker.
- (p) Do not touch the pins of the interface connector directly with bare hands.
- (q) Be cautious not to be peeled off the protection film.

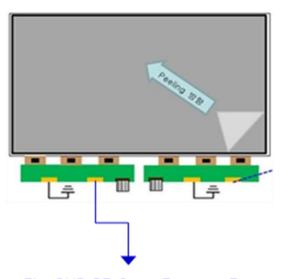

Fig. GND SR-Open Pattern – Be sure to be contacted to the ground while peeling of the protection film

- Make sure to peel off slowly
 (It is recommended to peel it off at the speed of more than 8sec. constantly.)
- The peeling direction is shown at the Fig
- Instruct the ground worker to work with the adequate methods such as the antistatic wrist band.
- Maker sure to be grounded the source PBA while peeling of the protection film.
- lonized air should be blown over during the peeling
- The protection film should not t be contacted to the source drive IC.
- If the adhesive stains remain on the polarizer after the protection film is peeled off, please move stains with isopropylalcohol liquid.
- (r) The protection film for the polarizer on the panel kit should be slowly peeled off just before using so that the electrostatic charge can be minimized.
- (s) The panel kit and BLU kit have high frequency circuits. The sufficient suppression to the EMI should be done by the set manufacturers.
- (t) The set of which the panel is assembled shall not be twisted. If the product is twisted, it may cause the damage on the product.
- (u) Surface Temp. of IC should be controlled less than 100°C, operating over the Temp. can cause the damage or decrease of lifetime.

MODEL LSC550HJ03-W Doc. No Page 26 / 42

9.2 Storage

The storage condition for packing

| ITEM | Unit | Min. | Max. | |
|------------------------|---|------|------|--|
| Storage Temperature | (°C) | 5 | 40 | |
| Storage Humidity | (%RH) | 35 | 75 | |
| Storage life | 12 months Based on shipping date at SDC site | | | |
| Storage Condition | (1) Design the warehouse to be ventilated efficiently with equipping the roof, the ventilation system, and the temp. controller. (2) Don't load the product on the floor and store the product with loaded on the pallet placed far away from the wall. (3) Avoid exposing the product to the direct light, moisture, and water and prevent the product from being condensed. (4) Don't store the product at the container located outside where it rains and the direct light shines. (5) Prevent the product from being exposed to the noxious gas such as the acid gas or alkali gas which may damage the electric device. (6) Don't store the product at the location surrounded by dangerous factors, which can deteriorate the quality of product. | | | |

9.3 Operation

- (a) Do not connect or disconnect the FFC cable during the "Power On" condition.
- (b) Power supply should be always turned on and off by the "Power on/off sequence"
- (c) The module has high frequency circuits. The sufficient suppression to the electromagnetic interference should be done by the system manufacturers. The grounding and shielding methods is important to minimize the interference.
- (d) The cables between TV SET connector and Control PBA interface cable should be connected directly to have a minimized length. A longer cable between TV SET connector and Control PBA interface cable maybe operate abnormal display
- (e) Recommend to age for over 1 hour at least in the state, which the product is driving initially to stabilize the characteristic of the initial TFT.
- (f) Response time depends on the temperature. (In Lower temperature, it becomes longer)

9.4 Operation condition guide

(a) The LCD product shall be operated under normal conditions.

The normal condition is defined as below;

- Temperature : 20±15°C

- Humidity: 55±20%

- Display pattern: continually changing pattern (Not stationary)

(b) If the product will be used under extreme conditions such as under the high temperature, humidity, display patterns or the operation time etc.., it is strongly recommended to contact SDC for the advice about the application of engineering. Otherwise, its reliability and the function may not be guaranteed. Extreme conditions are commonly found at airports, transit stations, banks, stock markets, and controlling systems.

9.5 Others

- (a) The ultra-violet ray filter is necessary for the outdoor operation.
- (b) Avoid the condensation of water which may result in the improper operation of product or the disconnection of electrode.
- (c) Do not exceed the limit on the absolute maximum rating. (For example, the supply voltage variation, the input voltage variation, the variation in content of parts and environmental temperature, and so on) If not, panel may be damaged.
- (d) If the module keeps displaying the same pattern for a long period of time, the image may be remained to the screen. To avoid the image sticking, it is recommended to use a screen saver.
- (e) This Panel has its circuitry of PCB's on the rear side, so it should be handled carefully in order for a force not to be applied.
- (f) Please contact the SDC in advance when the same pattern is displayed for a long time

MODEL LSC550HJ03-W Doc. No Page 28 / 42

10. Special precautions

10.1 Lists to be cautious when executing the design process

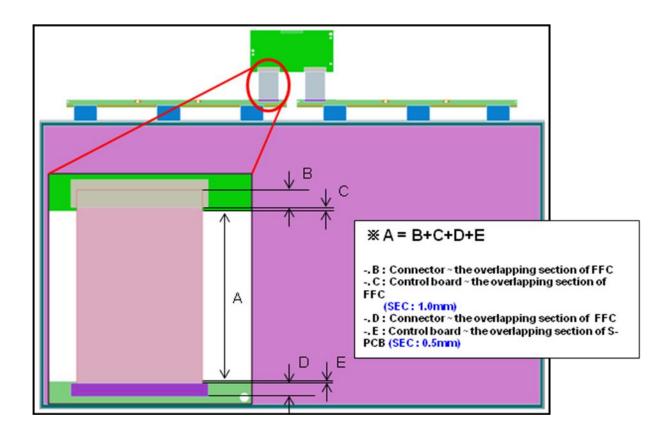

| No. | Component | Expected cause | | | |
|-----|---|---|--|--|--|
| 1 | Upholding part for panel | Prevent the panel from breaking by assigning gaps between the panel and the upholding part for panel on the drawing for the upholding part for panel. Refer to the (a), (b), (c) of 3-1 for the design of BLU. | | | |
| 2 | The shape of the upholding part for panel | Design the upholding part for panel to fit to the panel appropriately when designing the BLU since the shape of the upholding part for panel may damage the panel. Refer to the (a), (b), (c) of 3-1 for the design of BLU. | | | |
| 3 | The edge of upholding part for panel | Design the edge of panel to have a sufficient space with the upholding part for panel when designing the BLU since the edge of the upholding part for panel may damage the panel when assembling the panel and BLU. Refer to the (a), (b), (c) of 3-1 for the design of BLU. | | | |
| 4 | Upholding part for panel | Place the upholding part for the panel in order for the shape of mold, which contacts with the panel not to interfere with the area of panel. Refer to the (a), (b), (c) of 3-1 for the design of BLU. | | | |
| 5 | Drive IC | Design the BLU in order for the COF not to contain the lead crack resulted from the tensioned COF created when the product is twisted if the space between the D-IC COF and the middle mold isn't sufficient. Refer to the (a), (b), (c),(d),(e),(f), and (g)of 3-2 for the design of BLU. | | | |
| 6 | Drive IC | Design the BLU in order for the product not to contain the lead crack resulted from the tensioned COF caused under the condition, which the product is twisted by fixing the source PCB. Refer to the (a), (b), (c),(d),(e),(f), and (g)of 3-2 for the design of BLU. | | | |
| 7 | IC component | 1) The temperature of each part of product suggested by our company and the second vendor shall meet the standard of temperature, which is recommended not to be exceeded by our company when the product is affected under the various temperature ranges. Apply over 1mm long separation distance stated in the safety standard between the electric part and each conductor. (Apply the rated separation distance when insulating.) | | | |
| 8 | Thermal pad | Apply the thermal pad in a designated size to the product as a measure to lower the temperature of heat in order for each part to use the rated temperature. | | | |
| 9 | POL | The surrounding area of the POL shall be treated with an electrification treatment since the external ESD may cause a phenomenon, which the POL is coming off. In addition, the GND portion of source PBA shall be grounded. | | | |
| 10 | РВА | The GND portion of each PBA shall be contacted with the GND portion of BLU. Refer to the (a) and (b) of 3-3 for the design of BLU. | | | |
| 11 | Circuit | The standardized approval from the client is required since the EMI is executed by a client. Our company can only measure the reference since the client measures the BLU. | | | |
| 12 | The height of component | Design the BLU with considering the maximum height of parts, which our company suggests. | | | |
| 13 | Between the FFC and the C-PBA | Design the instrument with considering the length between the FFC and the control PBA. (The marginal minimum length of 5mm or 8mm is required.) | | | |
| 14 | Panel | The surface temperature of panel shall be maintained within 0°C and 45°C when the external ambient temperature is at 25°C. (Design the BLU with considering the increase of the temperature in the panel by the LED, CCFL, and etc.) | | | |
| 15 | Aging | Recommend to age for over 1 hour at least in the state, which the product is driving initially to stabilize the characteristic of the initial TFT. | | | |
| 16 | The attachment of gasket | The additional confirmation by our company is required If the attachment of gasket to the S-PBA of our company is required.(To fix the S-PBA or the EMI) | | | |
| 17 | Drive IC | Design the top chassis and the driver IC to be contacted by placing the shape of emboss inside the top chassis as a measure to prevent the driver IC from heating. The size of emboss shall be designed in larger size than the size of IC inside the film of the driver IC. Refer to the (a), (b), (c),(d),(e),(f), and (g)of 3-2 for the design of BLU. | | | |
| 18 | The prohibited bandwidth | Design the BLU in order for the BLU not to interfere with the area, where the control PBA and the source PBA are located densely according to the drawing for the BLU from our company. | | | |
| 19 | S-PBA | The material, which contacts with the bottom side of S-PBA which has a pattern shall be non-conducting material or shall be insulated. | | | |

2. The guide for the mechanical design

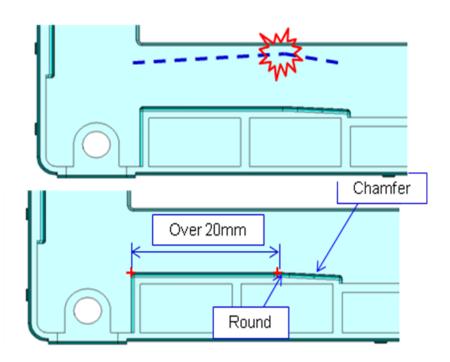

2.1 The panel guide

(a) It is recommended to avoid the following cases since the light leakage can be caused by the pressure of the guiding structure.

When the guiding part is made of plastic resin, the gap between the panel and the guiding structure should be considered when you design. The shrinkage under the situation which the temperatures change causes the light leakage. For your reference, it is recommended to have a total gap between the panel and the guide structure as below (When the resin is composed of the PC and the 15% of G/F.)

| □ ₩ | | 32" | 40" | 46" | 55" |
|------------|--------------|-----|-----|-----|-----|
| Total Gap | Right & Left | 0.9 | 0.9 | 1.0 | 1.1 |
| | Top & Bottom | 0.6 | 0.7 | 0.8 | 0.9 |

It is recommended to follow the dimension and the shape of the guiding structure stated as below since the distortion of guiding parts can cause the light leakage

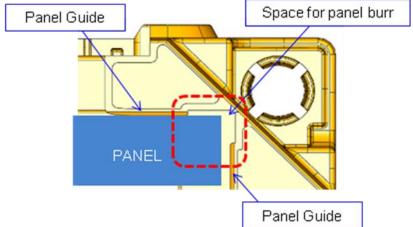

MODEL LSC550HJ03-W Doc. No Page 35 / 42

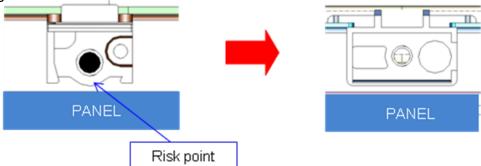

SAMSUNG

SAMSUNG Confidential

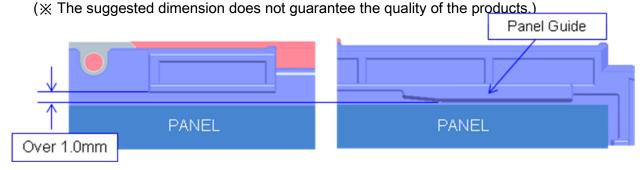

(b) When the panel guide point is designed at the edge of the panel, the points in the corner shall not be designed to be contacted with the other parts in order to avoid the crack on the panel caused by the burr of the panel.

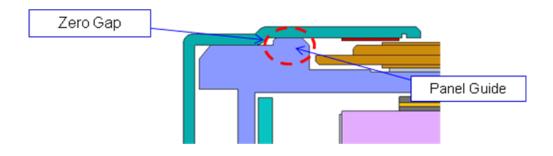

- (c) It is recommended to avoid placing the ribs as shown below since the panel damage with the unstable design can be easily happened under the external force.
- -. The sharp or the round shape near the panel shall be changed to a flat shape, such as the shape of screw point, the gate point. and etc.

-. It is recommended to keep the gap between the panel guides and ribs over 1mm in the worst conditions.

-. The gap between the panel guide and the front cover (or the front chassis) should be a zero in Z-direction to avoid the being broken in the panel caused by being stuck between the gap.

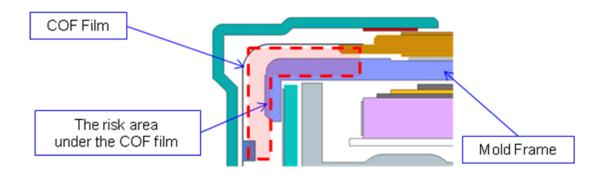

MODEL LSC550HJ03-W Doc. No Page 36 / 42

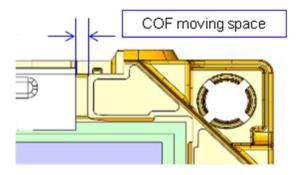

2.2 The COF and the Drive IC

(a) The pattern of COF is easily damaged by the sharp edge of the press and the burr of mold under the condition which the products are shaking while delivering. Therefore, it is recommended to avoid designing not to locate the gate of mold or the parting line in the position of COF when designing the product.

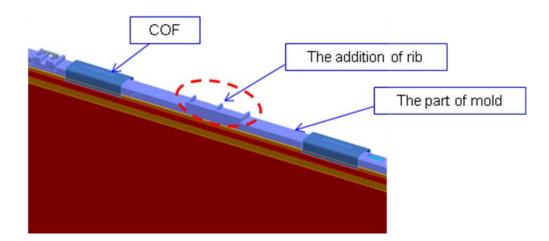

(b) It is recommended to secure the sufficient gap between the COF and the other parts when designing the product since the lack of gap between the COF and the other parts can cause the damage in the COF such as the lead crack under the condition which the product is twisted. (※ The space over 3.0mm for moving is recommended, but the quality of products is not guaranteed.)

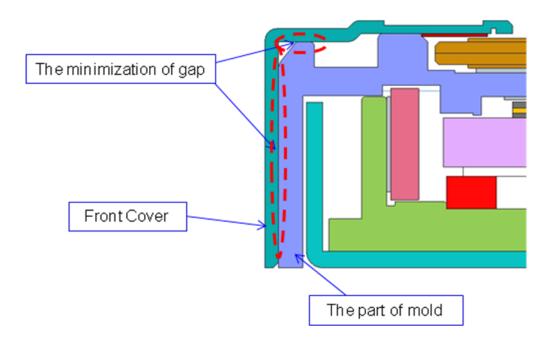

(c) The temperature of the surface of Drive-IC should be less than 100°C

MODEL LSC550HJ03-W Doc. No Page 37 / 42

- (d) The sufficient space for the COF and the Drive IC should be prepared including the worst condition to prevent the damage on Drive-IC from the external force.
 - -. If the panel is placed to the upper part of the mold, it is recommended to keep the gap between the mold and the front cover or the mold and the top chassis by adding the rib between the COF and COF.

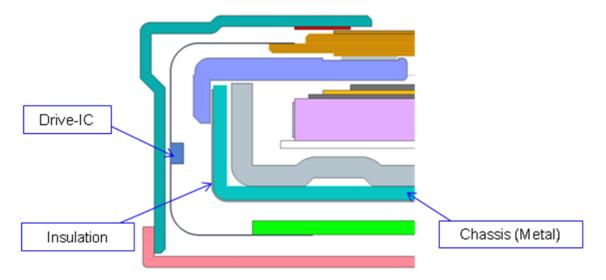

-. Design the gap between the rib and the cover to maintain the space for the protection of COF as small as possible

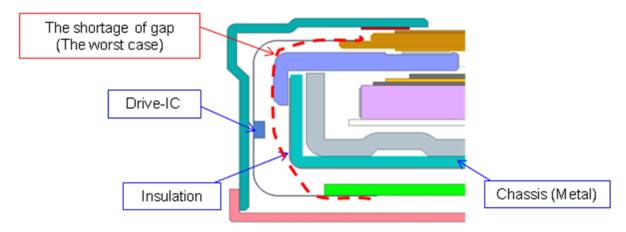

MODEL LSC550HJ03-W Doc. No Page 38 / 42

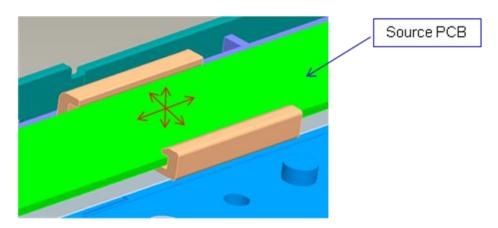

(e) When metal parts are assembled next to the Drive-IC, the metal part should be insulated to avoid the damage on IC from the static electricity.

(f) If the length of COF is designed to be short, the lead crack can be occurred by applying the tension on the COF due to the being shaking of the product.

(g) It is recommended to design source PCB can be easily moved to the direction of each axis in order for the tension not to be applied to the edge of COF under vibrating condition, such as transportation of the product.

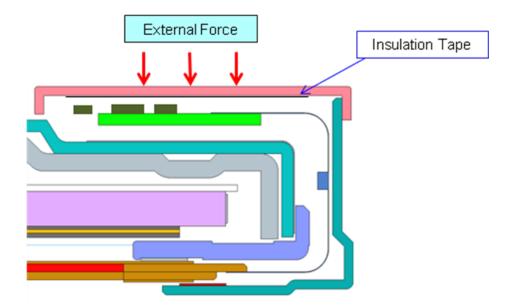

MODEL LSC550HJ03-W Doc. No Page 39 / 42

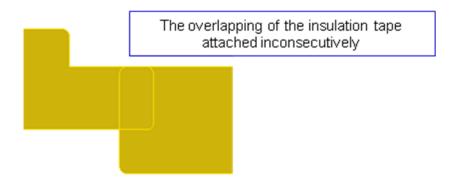

2.3 The control PBA and the Source PBA

(a) The gaps between the source PBA and the other parts and the control PBA and other parts should be considered to avoid the damage on electrical parts by the static electricity and the external forces. If the material of shielding part is metal, the insulation method is recommended.

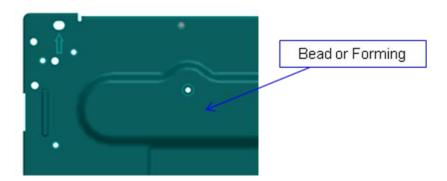

(b) Confirm the status of insulation tape since the inappropriately attached insulation tape can cause the damage on the parts of product if the insulation tape for the insulation of part of PBA is attached inconsecutively due to the inappropriate design or the error occurred during the process.

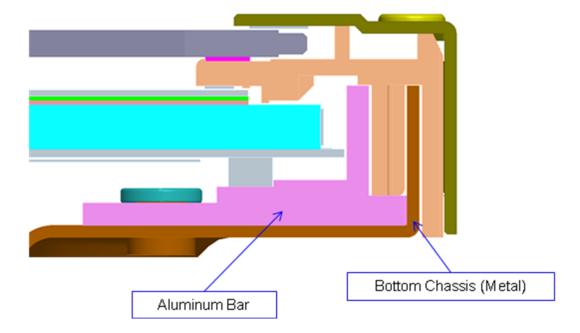

MODEL LSC550HJ03-W Doc. No Page 40 / 42

- 2. 4 The 4-Corner and the cloudy light leakage
 - (a) It is recommended to follow the method delineated in the picture below for designing since the distortion on panel and the sharp increase of the temperature gradient in the surface of panel can cause the light leakage.
 - -. Place the strong beads at the corner point to control the flatness of the panel.

-. The heat sinking plane in the lower parts shall contact with the bottom chassis.

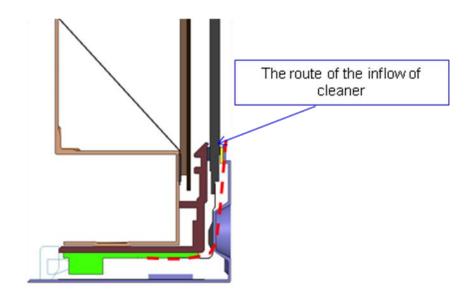

MODEL LSC550HJ03-W Doc. No Page 41 / 42

2.5 Others

(a) The corrosion of the source PBA

Be cautious when selecting the specification of tape or designing the product since the corrosion of the parts of circuit caused by the overuse of the glass cleaner of the end user may cause the occurrence of the abnormalities in the screen, if the model is the reversed product which has the source PBA designed at the 90°.

(b) The deterioration of crystal liquid

It is recommended to design the products to make the temperature of the active area of the product operated below the 50°C for the protection from containing the abnormalities in the screen due to the deterioration of the liquid crystal. In addition, it is recommended to design the product not to cause the occurrence of the deterioration of liquid crystal under the ambient temperature of 50 °C.

MODEL LSC550HJ03-W Doc. No Page 42 / 42
