General Description

Description

LTA520HE10-001 is a color active matrix liquid crystal display (LCD) that uses amorphous silicon TFT(Thin Film Transistor) as switching components. This model is composed of a TFT LCD panel, a driver circuit and a back light unit. The resolution of a 52.0" is 1920 x 1080 and this model can display up to 1.07 billion colors with wide viewing angle of 89° or higher in all directions. This panel is intended to support applications to provide a excellent performance for Flat Panel Display such as Home-alone Multimedia TFT-LCD TV and High Definition TV.

Features

- RoHS compliance (Pb-free)
- High contrast ratio & aperture ratio with color gamut
- SPVA(Super Patterned Vertical Align) mode
- Wide viewing angle ($\pm178°$)
- High speed response & Natural motion (DFR :Double Frame Rate)
- FHD resolution (16:9)
- Low Power consumption
- Direct Type 24 CCFLs (Cold Cathode Fluorescent Lamp)
- DE(Data Enable) mode
- 4ch LVDS (Low Voltage Differential Signaling) interface

General Information

Items	Specification	Unit	Note

- Test Equipment Setup

   The measurement should be executed in a stable, windless and dark room between
   40min and 60min after lighting the back light at the given temperature for stabilization
   of the back light. This should be measured in the center of screen.
   Environment condition : Ta = 25 $\pm$ 2 °C

Note) Power Consumption is measured when 500[cd/m²] of luminance which is the typical luminance.
Lamp Current is measured at the point before Lamp.

(1) Max Value of the Power Consumption is measured during initial turn-on time* of the backlight.

(2) Max Value of the Power Consumption is measured after 60 min warm-up.

.

* Initial turn-on time : From 0sec to 60min after turn-on

5.2 Timing diagrams of interface signal (DE only mode)
5.3 Power ON/OFF Sequence

To prevent a latch-up or DC operation of the LCD Module, the power on/off sequence should be as the diagram below.

0<T1≤10msec
0<T2≤50msec
0<T3≤50msec
1000msec≤T4

700msec≤T5
(Recommend Value :
1000msec≤T5)
10msec≤T6
(Recommend Value :
100msec≤T6)
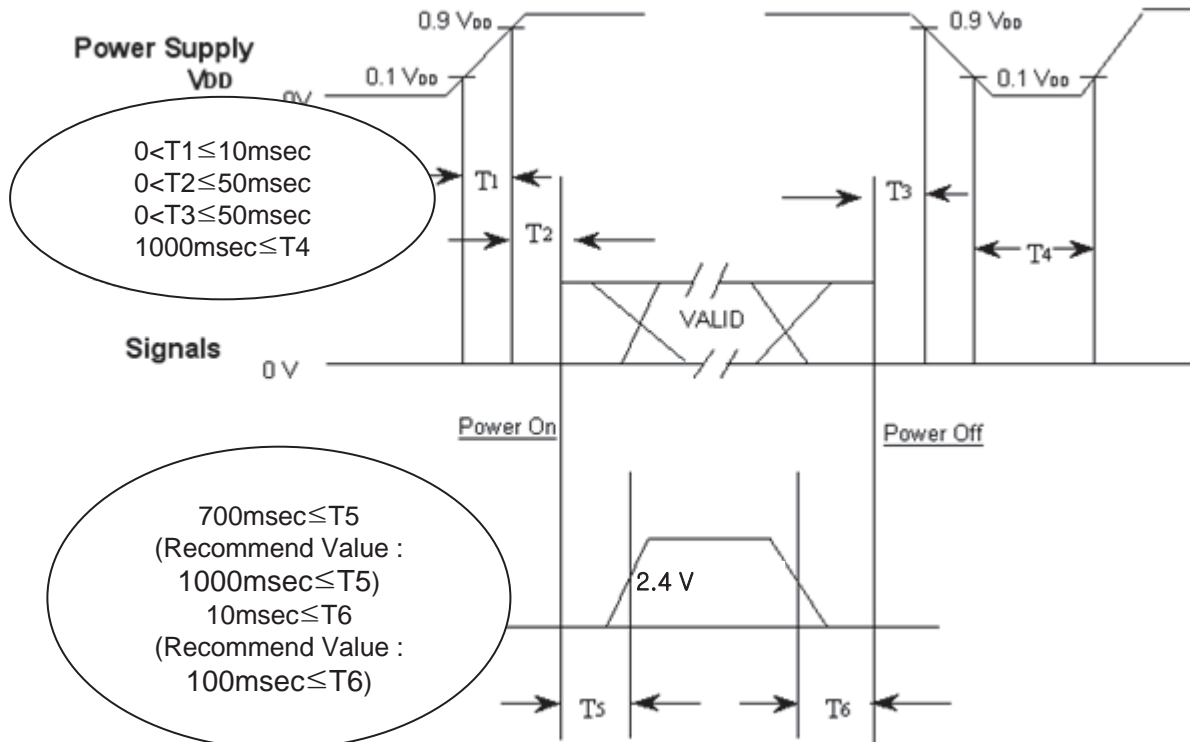

T1 : V_{DD} rising time from 10% to 90%
T2 : The time from V_{DD} to valid data at power ON.
T3 : The time from valid data off to V_{DD} off at power Off.
T4 : V_{DD} off time for Windows restart
T5 : The time from valid data to B/L enable at power ON.
T6 : The time from valid data off to B/L disable at power Off.

- The supply voltage of the external system for the Module input should be the same as the definition of V_{DD}.
- Apply the lamp voltage within the LCD operation range. When the back light turns on before the LCD operation or the LCD turns off before the back light turns off, the display may momentarily show abnormal screen.
- In case of V_{DD} = off level, please keep the level of input signals low or keep a high impedance.
- T4 should be measured after the Module has been fully discharged between power off and on period.
- Interface signal should not be kept at high impedance when the power is on.

9. General Precautions

9.1 Handling

(a) When the Module is assembled, it should be attached to the system firmly using all mounting holes. Be careful not to twist and bend the Module.

(b) Because the inverter use high voltage, it should be disconnected from power before it is assembled or disassembled.

(c) Refrain from strong mechanical shock and / or any force to the Module. In addition to damage, this may cause improper operation or damage to the Module and CCFT back light.

(d) Note that polarizers are very fragile and could be damage easily. Do not press or scratch the surface harder than a HB pencil lead.

(e) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, staining or discoloration may occur.

(f) If the surface of the polarizer is dirty, clean it using absorbent cotton or soft cloth.

(g) Desirable cleaners are water, IPA(Isopropyl Alcohol) or Hexane. Do not use Ketone type materials(ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.

(h) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth . In case of contact with hands, legs or clothes, it must be washed away with soap thoroughly.

(i) Protect the module from Electrostatic discharge. Otherwise the ASIC IC or semiconductor would be damaged.

(j) Use finger-stalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.

(k) Do not disassemble the Module.

(l) Do not disassemble shield case of inverter & LVDS board

(m) Do not connect N.C pins. (Samsung internal use only)

(n) Protection film for polarizer on the Module should be slowly peeled off just before use so that the electrostatic charge can be minimized. Must put on antistatic glove while handling a module

(o) Pins of I/F connector should not be touched directly with bare hands.

MODEL	LTA520HE10-001	Doc. No	06-000-S-071127	Page	25 / 27

9.2 Storage

(a) Do not leave the Module in high temperature, and high humidity for a long time.
   It is highly recommended to store the Module with temperature from 0 to 35℃
   and relative humidity of less than 70%.

(b) Do not store the TFT-LCD Module in direct sunlight.

(c) The Module should be stored in a dark place. It is prohibited to apply sunlight or
   fluorescent light in storing.

9.3 Operation

(a) Do not connect or disconnect the Module in the "Power On" condition.

(b) Power supply should always be turned on/off by the "Power on/off sequence"

(c) Module has high frequency circuits. Sufficient suppression to the electromagnetic
   interference should be done by system manufacturers. Grounding and shielding methods
   may be important to minimize the interference.

(d) The cable between the back light connector and its inverter power supply should
   be connected directly with a minimized length. A longer cable between
   the back light and the inverter may cause lower luminance of lamp(CCFT) and
   may require higher startup voltage(Vs).

9.4 Operation Condition Guide

(a) The LCD product should be operated under normal conditions.
    Normal condition is defined as below;
         - Temperature : 20±15℃
         - Humidity : 55±20%
         - Display pattern : continually changing pattern (Not stationary)

(b) If the product will be used in extreme conditions such as high temperature,
   humidity, display patterns or operation time etc.., It is strongly recommended
   to contact SEC for Application engineering advice. Otherwise, its reliability and
   function may not be guaranteed. Extreme conditions are commonly found at
   Airports, Transit Stations, Banks, Stock market, and Controlling systems.

9.5 Others

(a) Ultra-violet ray filter is necessary for outdoor operation.

(b) Avoid condensation of water. It may result in improper operation or disconnection
of electrode.

(c) Do not exceed the absolute maximum rating value. (supply voltage variation,
input voltage variation, variation in part contents and environmental temperature,
and so on)
Otherwise the Module may be damaged.

(d) If the Module keeps displaying the same pattern for a long period of time,
the image may be "sticked" to the screen.
To avoid image sticking, it is recommended to use a screen saver.

(e) This Module has its circuitry PCB's on the rear side and should be handled
carefully in order not to be stressed.

(f) Please contact SEC in advance when you display the same pattern for a long time.
