5. MEASURE METHOD

A. Standard transmitter:

The transmitter whose output is adjusted up become $V_o = 400 \text{ mVp-p}$ by the output waveform as shown in Fig. 1 and using the measuring method as shown in Fig. 2 is specified as the standard transmitter.

However, the infrared diode to be used for the transmitter should be $\lambda_{\text{peak}} = 940 \text{ nm}$, $\Delta\lambda = 50 \text{ nm}$.

C. Pulse width measuring condition

Specifies at the TWL and the TWH period of the output pulse by using the aforementioned standard transmitter as shown in Fig. 4.
