

SANYO**LV2210V****Basic Data Communication Receiver IC****Overview**

The LV2210V is a basic data communication receiver IC that integrates on a single chip a frequency synthesizer that can be controlled by serial data, a downconverter mixer, a narrow-band FM IF system, and a data shaper circuit.

Features

- Operating frequency range: 7 to 50 MHz
- Operating supply voltage range: 2.7 to 5.5 V
- Miniature package: SSOP24 (275 mil)

Functions

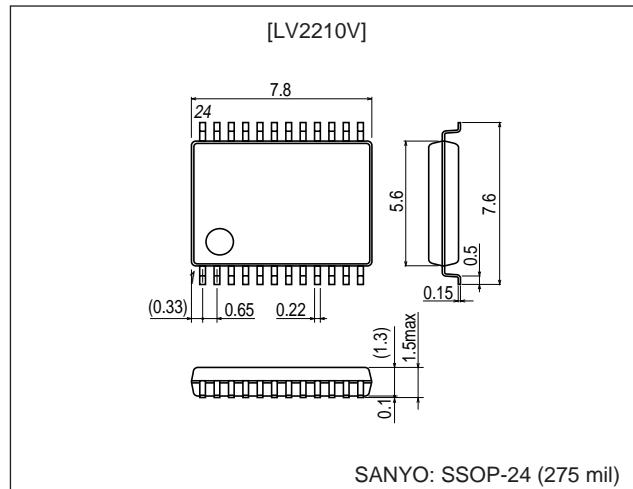

- PLL synthesizer
- Downconverter mixer
- VCO transistor
- IF amplifier, limiter, and RSSI
- FM detector (quadrature)
- Data shaper

Specifications**Absolute Maximum Ratings at Ta = 25°C**

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V _{CC} max		6.0	V
Maximum input voltage	V _{in} max		V _{CC} + 0.3	V
Maximum output voltage	V _{out} max		V _{CC} + 0.3	V
Allowable power dissipation	P _d max	T _a ≤ 70°C	180	mW
Operating temperature	T _{opr}		-20 to +70	°C
Storage temperature	T _{stg}		-40 to +125	°C

Package Dimensions

unit: mm

3175B-SSOP24 (275 mil)

SANYO: SSOP-24 (275 mil)

- Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.
- SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

Control Data Format and Description

CONTROL DATA																AD
D0	D1	D2	D3	D4	D5	D6	D7	D8	D9	D10	D11	D12	D13	D14	D15	AD
R0	R1	R2	R3	R4	R5	R6	R7	R8	R9	R10	R11	CP	SW	T2	T1	0
P0	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10	P11	P12	P13	*	*	1

BIT	DESCRIPTION
AD	Latch selection bit
T1, T2	Test bits. These bits must always be set to 0.
R0 to R11	Reference divider bits. R0 is the LSB. This is a binary value field.
P0 to P13	Programmable divider bits. P0 is the LSB. This is a binary value field.
CP	Charge pump current switching bit. 0: 100 μA, 1: 400 μA
SW	On/off switch for the reference voltage for the data shaper. 1: On, 0: Off

Reference divider divisor setting data

- The circuit consists of a fixed divide-by-two circuit and a 12-bit reference divider.
- A divisor, which is a multiple of 2 with a value of up to 8190, can be set by sending the reference divider data.
- The value of the divisor is determined as follows.

$$\text{Divisor } N = 2(R0 + R1 \times 2^1 + R2 \times 2^2 + R3 \times 2^3 + \dots + R11 \times 2^{11})$$

Programmable divider divisor setting data

- The circuit consists of a 4-bit swallow counter and a 10-bit programmable counter.
- A divisor with a value in the range 240 to 16,383 can be set by sending the swallow counter and programmable counter data.
- The value of the divisor is determined as follows.

$$\text{Divisor } N = (16D + A)$$

$$D = P4 + P5 \times 2^1 + P6 \times 2^2 + P7 \times 2^3 + \dots + P13 \times 2^9$$

$$A = P0 + P1 \times 2^1 + P2 \times 2^2 + P3 \times 2^3$$

PLL Divisor Setup Example

- The reference divider divisor is calculated as follows when a 12.8 MHz crystal element is used, the comparison frequency in the phase detector is 5 kHz, and the VCO oscillator frequency is 26.545 MHz.

$$12.8 \text{ MHz} \div 5 \text{ kHz} = 2560 \text{ (divisor value)}$$

Since there is a fixed divide-by-two circuit, the required divisor is as follows.

$$2560 \times 1/2 = 1280$$

The value 1280 converted to binary (10100000000) is the reference divider setting data.

The programmable divider divisor is calculated as follows.

$$26.545 \text{ MHz} \div 5 \text{ kHz} = 5309 \text{ (divisor value)}$$

The value 5309 converted to binary (1010010111101) is the programmable divider setting data.

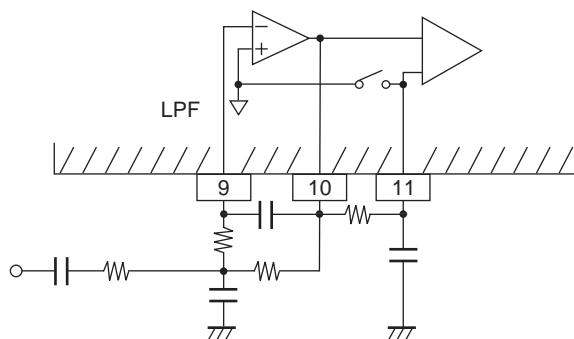

- The control data is set as follows

CONTROL DATA																AD
D0	D1	D2	D3	D4	D5	D6	D7	D8	D9	D10	D11	D12	D13	D14	D15	AD
0	0	0	0	0	0	0	0	1	0	1	0	0	1	0	0	0
1	0	1	1	1	1	0	1	0	0	1	0	1	0	0	0	1

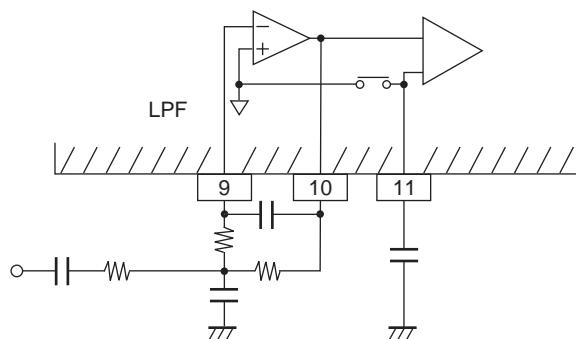

(Charge pump current = 100 μA , Data shaper switch = on)
