## LV23401V — Bi-CMOS IC For Home Stereo System 1-chip Tuner IC Incorporating PLL

### Overview

The LV23401V is a AM/FM one-chip tuner IC for home stereo system.

### Functions

- AM tuner
- FM tuner
- MPX stereo decoder
- FLL tuning system

### Features

- All the adjustment work of external parts is unnecessary.
- CCB control with easy command base
- External parts are reduced by LOW-IF frequency (FM=225kHz, AM=53kHz) adoption.
- The high sensitivity reception is achieved in low noise MIX input circuit.
- All bands of Japan-U.S.-Euro can be received by the soft program change (76MHz to 108MHz).
- With built-in FLL(Frequency Locked Loop) tune function
- Soft mute and stereo blend function (seven stages programmed control possible)
- With built-in adjacent channel obstruction removal function
- With built-in stereo pilot cancellation function
- For EN55020-S1 standard (European immunity)
- With built-in power save function

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

# LV23401V

## Specifications

### Maximum Ratings at Ta = 25 °C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V <sub>CC</sub> max	Analog block supply voltage	10.0	V
Maximum output voltage	V <sub>O</sub> max	Digital block supply voltage	4.5	V
Maximum input voltage	V <sub>IN1</sub> max	CE, DI, CL	*1) Vref2+0.35	V
	V <sub>IN2</sub> max	CLK IN	4.5	V
Allowable power dissipation	Pd max	Ta≤70°C *2)	450	mW
Operating temperature	Topr		-20 to +70	°C
Storage temperature	Tstg		-40 to +125	°C

\*1) Vref2 = 22 pin voltage

\*2) When mounted on the specified printed circuit board (114.3mm × 76.1mm × 1.6mm), glass epoxy

### Operating Condition at Ta = 25 °C

Parameter	Symbol	Conditions	Ratings	Unit
Recommended supply voltage	V <sub>CC</sub>	Analog block supply voltage	9.0	V
Operating supply voltage range	V <sub>CC</sub> op	Resister 1Eh Bit 1(LEVSHIF)=0	4.5 to 6.5	V
		Resister 1Eh Bit 1(LEVSHIF)=1	8.5 to 9.5	V

\* Stabilize the service voltage so as not to cause the voltage charge by the noise etc.

### Interface block allowable operation range at Ta = -20 to +70°C, V<sub>SS</sub> = 0V

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Input "H" level voltage	V <sub>IH1</sub>	CE, DI, CL	2.3		3.435	V
	V <sub>IH2</sub>	CLK IN	2.3		3.435	V
Input "L" level voltage	V <sub>IL1</sub>	CE, DI, CL	0		0.5	V
	V <sub>IL2</sub>	CLK IN	0		0.3	V
Output voltage	V <sub>O</sub>	D0	0		4.0	V
Crystal frequency	f <sub>IN</sub>	CLK IN		32.768		kHz
Crystal frequency deflection	f devi1	For the standard European immunity	-50		+50	ppm
	f devi2	When standard non-corresponds European immunity	-150		+150	ppm
Crystal vibrator load capacity	CL	*	4	12.5		pF

\* The evaluation request to the crystal maker is recommended because it changes by the substrate and the circuit constant used.

### Operating Characteristics at Ta = 25°C, V<sub>CC</sub> = 9.0V with the designated circuit.

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Current drain (at no input)	I <sub>CCFM</sub>	No input in FM mode. 15 pin supply current.	25	35	45	mA
	I <sub>CCAM</sub>	No input in AM mode. 15 pin supply current.	14	24	34	mA
Power save current drain	I standby	15 pin supply current power save : Register 1Fh_bit0 = 0		0.25	0.7	mA
V <sub>DD</sub> output voltage	V <sub>DD</sub>	22 pin voltage (reference value)	(2.772)	3.3	(3.435)	V
V <sub>DD</sub> drop-out voltage	V <sub>DD_drop</sub>	22 pin voltage. Drive mode at 10mA. *Drive current maximum = 10mA		0.15		V
[FM receive characteristics] : fc = 98MHz, V <sub>IN</sub> = 60dBμV, fm = 1kHz, De-emphasis = 50μs, IF = 225kHz, BW = 50% MONO : 75kHz dev. STEREO : L+R = 67.5kHz dev., Pilot = 7.5kHz dev. Volume level = 3, Soft mute = off, Soft stereo = off, Resister 1Eh Bit 1(LEVSHIF) = 1, 9 pin output, IHF-BPF						
S/N 50dB Sensitivity	SN50	Input level that becomes S/N=50dB		17	24	dBμV
S/N 30dB Sensitivity	SN30	Input level that becomes S/N=30dB		12	18	dBμV
IHF Sensitivity	IHF	Input level that becomes THD=3%		12	20	dBμV
Signal-to-noise ratio	SN	MONO	62	70		dB
	SN-ST1	STEREO	58	66		dB
Total harmonic distortion	THD1	MONO		0.5	1.5	%
	THD1-ST	STEREO		0.5	2.5	%
	THD2	MONO, 150kHz dev.		1.5	5	%
	THD3	MONO, V <sub>IN</sub> = 120dBμV		0.6	2.5	%

## Pin function

pin	pin name	Description	Remark	DC_bias
1	AM ANT	AM antenna	It connects it to 2pin through the matching coil or the bar antenna.	
2	AM ref	AM reference voltage	It connects it to 1pin through the matching coil or the bar antenna.	2.0V
3	AM CAP	AM capacitor bank	It connects it to GND through an external inductor of recommendation 240 $\mu$ H.	
4	GND1	AM antenna GND	Connect to GND	
5	Vref1	Analog reference voltage	It connects it to GND through the capacitor of 1 $\mu$ F.	
6	MPX OUT	Detected output	LC72725 and connection when RDS is used	
7	AM AGC	AM AGC	It connects it to GND through the capacitor of 4.7 $\mu$ F	
8	GND2	Analog GND	Connect to GND	
9	L OUT	L-ch audio output	The DC level changes by setting Resistor 1Eh bit1 (LEVSHIF) to adjust the output level according to the V <sub>CC</sub> potential.	
10	R OUT	R-ch audio output		
11	V <sub>CC</sub> Low	Low voltage mode	It is short with 15pin when using it with V <sub>CC</sub> < 6.0V or less.	
12	AM LCF	AM low cutting filter	It connects it to GND through the capacitor of 0.047 $\mu$ F	
13	SD OUT	SD detecting phase output		
14	ST OUT	ST detecting phase output		
15	V <sub>CC</sub>	Supply voltage		
16	CLK IN	Reference clock input	The crystal is recommended to be used. It is also possible to input directly clock signals (square wave GND standard).	
17	ST ADJ	Pilot margin adjustment pin	It connects it to GND through 180k $\Omega$	
18	CE	address/data switching timing		
19	CL	Communication clock		
20	DI	Data input		
21	DO	Data output	It connects it to 22 pin through 10k $\Omega$	
22	Vref2	V <sub>DD</sub> voltage output	3.3V voltage output pin. It is also possible to supply the current to other IC up to 10mA.	
23	GND3	Logic GND	Connect to GND	
24	L1	Local oscillation circuit	It connects it to 25 pin through 33nF.	
25	Vref3	Reference voltage for local oscillation circuit	It connects it to GND through the capacitor of 100 $\mu$ F	
26	L2	Local oscillation circuit	It connects it to 25 pin through 33nF.	
27	SD ADJ	SD = ON sensitivity adjustment pin	It connects it to GND through 22k $\Omega$	
28	FLL CAP	FLL low pass filter	It connects it to 25 pin through 0.1 $\mu$ F.	
29	GND4	FM antenna GND	Connect to GND	
30	FM ANT	FM antenna	Input impedance 75 $\Omega$ .

## Description of Pin Functions

No.	Pin name	Voltage (V)	Internal Equivalent Circuit	Remarks
1	AM-ANT	2.2V		AM antenna input pin. The AM antenna coil is connected between 2pin. R = 100Ω
2	AM-REF	2.2V		AM standard bias pin.
3	AM-CAP	-		AM Tuning for tune pin. (AM Capacitor Bank)
4	GND1	0V		Analog (AM_FE) GND pin.
5	VREF1	4.3V		Analog (tuner area) standard bias pin. VREF = 4.3V
6	MPX-OUT	2.5V		FM demodulation output pin. R1 = 100Ω R2 = 23kΩ R3 = 1kΩ
7	AM RF-AGC	-		AGC pin for AM-RF department Gain control. R1 = 2MΩ R2 = 5kΩ R3 = 250Ω R4 = 1kΩ
8	GND2	0V		Analog (tuner) GND pin.
9 10	L-OUT R-OUT	2.5V (It is 3.3V for LEVSHIF = 1)		L-ch (R-ch) output pin. R = 100Ω R <sub>OUT</sub> = 150Ω

Continued on next page.

# LV23401V

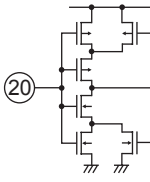

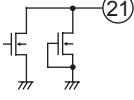

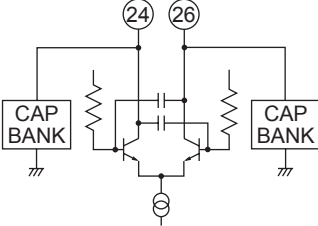

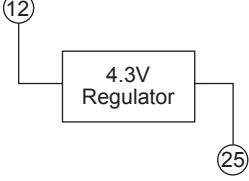

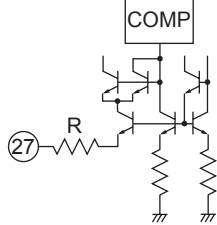

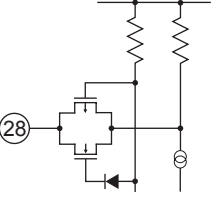

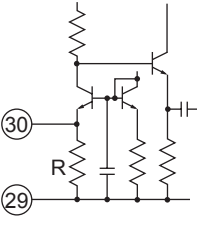

Continued from preceding page.

No.	Pin name	Voltage (V)	Internal Equivalent Circuit	Remarks
11	V <sub>CC</sub> -Low	-		It is short 11pin with 15pin when using it with V <sub>CC</sub> < 6.0V.
12	AM LCF	2.2V		AM Low-cut Filter pin. R1 = 250Ω R2 = 100kΩ R3 = 100kΩ R4 = 50kΩ R5 = 50kΩ
13	SD-OUT	V <sub>DD</sub>		SD indicator output pin. Active Low output R = 100kΩ
14	ST-OUT	V <sub>DD</sub>		FM stereo indicator output pin. Active Low output R = 100kΩ
15	V <sub>CC</sub>	V <sub>CC</sub>		Analog area supply voltage pin. 8.5 to 9.5V are impressed at Resister 1Eh bit 1(LEVSHIF) = 1, and it is short at "0" with V <sub>CC</sub> _Low.
16	CLK_IN	2.1V		Clock connection pin for internal standard. 32.768kHz crystal is connected. R = 100Ω
17	ST-ADJ	3.7V		Stereo lighting sensitivity adjustment pin. It connects it to GND through 180kΩ. R = 24kΩ
18	CE	-		Chip enable pin. Pin assumed to be high-level when serial data input (DI) and serial data output (DO).
19	CL	-		Data clock input pin Clock that takes data and synchronization when serial data input (DI) and serial data output (DO).

# LV23401V

Continued from preceding page.

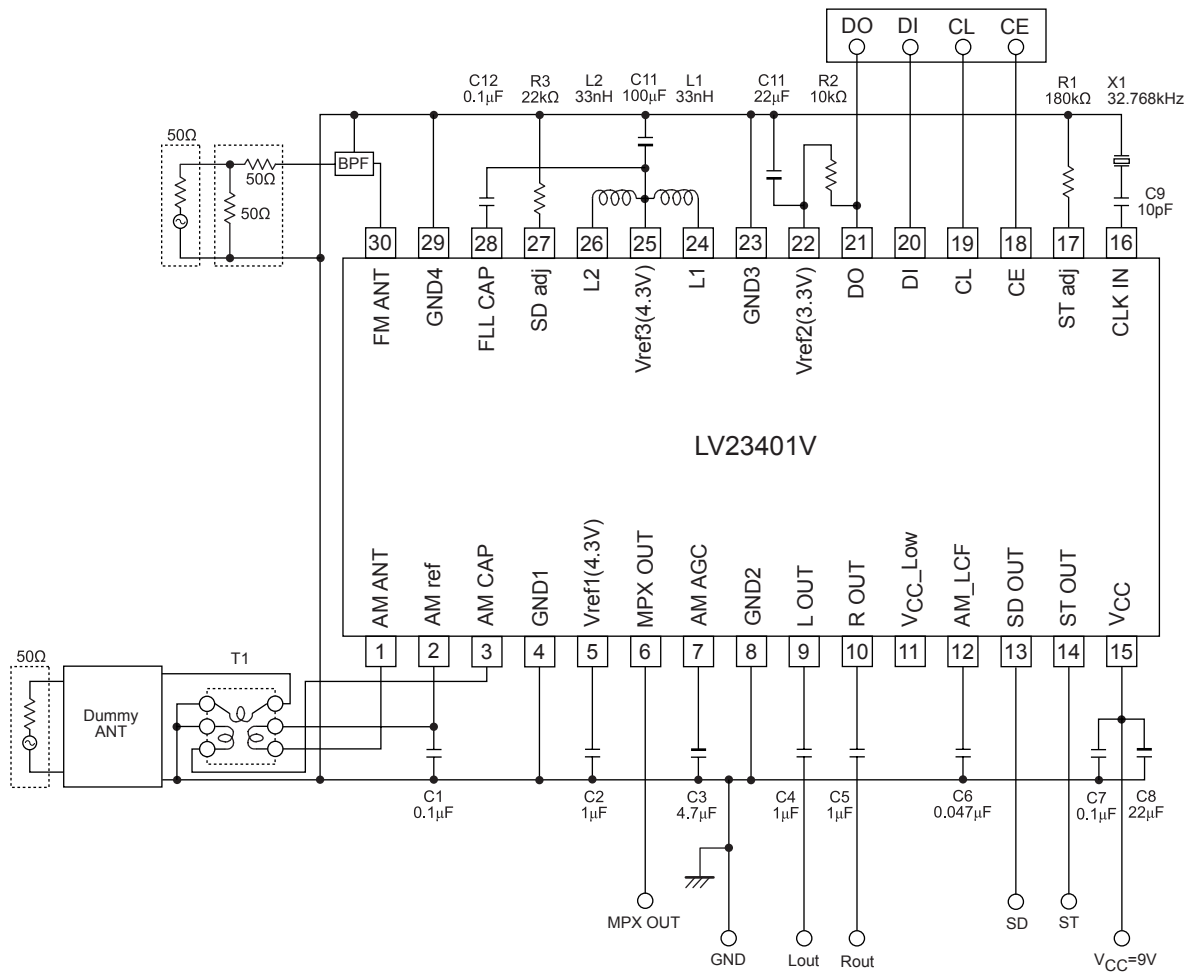

No.	Pin name	Voltage (V)	Internal Equivalent Circuit	Remarks
20	DI	-		Serial data input pin. Input pin of the serial data transmitted by controller.
21	DO	-		Serial data output pin. Serial data output pin to controller.
22	V <sub>DD</sub>	3.3V		Logic area standard bias pin. V <sub>DD</sub> = 3.3V
23	GND3	0V		Digital area (control block) GND pin.
24 26	L1 L2	4.3V		OSC coil connect pin. 33nH is connected between 25pin.
25	VREF2	4.3V		OSC area standard bias pin. VREF2 = 4.3V
27	SD-ADJ	0.1V		SD lighting sensitivity adjustment pin. It connects it to GND through 22kΩ. R = 100Ω
28	FLL-CAP	-		LPF pin for internal FLL control. R = 80kΩ
29	GND4	0V		Analog (FMRF) GND pin.
30	FM-ANT	0.9V		FM antenna input pin. R = 1.5kΩ R <sub>IN</sub> = 75Ω

\* L1 must be used when you receive an Eastern European band (65MHz to 75MHz) and L2 must use 39nH.

\* Inquire match (C9, C17, C18) of X1 and the X2 crystal of the crystal maker together with the substrate used.

## Interface specification

### 1) LV23401 Interface specification

LV23401 is controlled by the C<sup>2</sup>B (Computer Control Bus) cereal bus format.

C<sup>2</sup>B is a bus to achieve it economically surely format as for the communications between LSI in the system with two or more LSI. Because it is single master's system, the processing of a complex arbitration is unnecessary. Therefore, the load of hardware is reduced, and the system configuration that is economically abundant becomes possible.

Moreover, neither a lot of kinds of controller and interface doing nor special hardware is easily needed by serial I/O with software. C<sup>2</sup>B is thought between LSI in the equipment, and the communications between equipment that need a long line are not targeted.

### 2) C2B data composition

DI control data (cereal data input) composition

IN mode

LV23401V is controlled by the bus format composed of the sub-address (register) that stores the data of the device address of 8bit (address) and each 8bit. "C0" is input from LSB to the start as an address when the serial data is input to LV23401V, the device that controls is specified, and the mode as the data input is fixed. It inputs from LSB in order of data (bit setting)→ register synchronizing with data clock (CL) after the address is input and the data input can be concluded.

Composition of the DO control data (serial data output)

OUT mode

"C1" is input from LSB to the start as an address when the serial data is output from LV23401V, the controlled device is specified, and the mode as the data output is fixed. The subsequent data is output from DO pin synchronizing with lock (CL) after the address is input LSB from one with small register number. The output of data is ended by setting CE pin to Low.

## 3) Description of the Register of LV23401

### Register 00h – CHIP\_ID – Chip identify register (Read-Only)

7	6	5	4	3	2	1	0
ID[7:0]							
Bit 7-0 : ID[7:0] : 8-bit CHIP ID. LV23400 : 18h							
Note : To abort the command, write any value in this register.							

### Register 01h – CHIP\_REV – Chip Revision identify register (Read-Only)

7	6	5	4	3	2	1	0
Revision[7:0]							
Bit 7-0 : ID[7:0] : 8-bit Chip revision ES1 : 00h							
Note : To abort the command, write any value in this register.							

### Register 02h – RADIO\_STAT – Radio station status (Read-Only)

7	6	5	4	3	2	1	0
IM_STAT	IM_FS[1:0]		MO_ST	FS[2:0]		TUNED	
<p>Bit 7 : IM_STAT : State of image evasion code            0 = Eternal operation (It is possible to write it.)            1 = The image evasion is being processed. (Writing is improper.)</p> <p>Note : This bit operates only when Resister 14h_bit7 (IM_EVAS) is set to "1". The data writing processing to LV23401 when this bit is "1" is prohibited.</p> <p>Bit 6 - 5 : IM_FS : Image bureau electric field strength            0 : Image bureau none            1 : 0            2 : 0dB to 10dB compared with the hope bureau.            3 : The level of the image bureau is +10dB or more stronger than that of the hope bureau.</p> <p>Bit 4 : MO_ST : MONAURAL/STEREO display            0 = Stereo reception (Compelling the monaural setting is also the same.)            1 = Receiving in stereo mode.</p> <p>Bit 3 - 1 : FS[2:0] : Field strength            0 : Field strength &lt; 10dBμV            1 : Field strength 10 to 20dBμV            2 : Field strength 20 to 30dBμV            ...            3 : Field strength &gt; 70dBμV</p> <p>Bit 0 : TUNED : Radio-tuning flag            0 = No tuning.            1 = The tuning.</p> <p>Note : When the frequency tuning succeeds, this bit is set. This flag is cleared under the following three conditions.            1. PW_RAD = 0            2. Do the tuning of the frequency.            3. When FLL becomes outside the correction range</p> <p>Only when the TUNED flag is changed from one into 0, the RAD_IF interrupt flag is set.            When the status of TUNED changes from 0 into one, the interrupt is not generated.</p>							

### Register 04h – TNPL – Tune position low (Read-Only)

7	6	5	4	3	2	1	0
TUNEPOS[7:0]							
Bit 7-0 : TUNEPOS[7:0] : Current RF frequency (Low 8bit)							

## LV23401V

### Register 05h – TNP<sub>H</sub>\_STAT – Tune position high / status (Read-Only)

7	6	5	4	3	2	1	0
ERROR[1:0]		TUNEPOS[12:8]					
Bit 7 – 6 : ERROR[1:0] : Error code							
		ERROR[1:0]		Remark			
		0		OK, Command end (No Error)			
		1		DAC Limit Error			
		2		Command forced End			
		3		Command busy (executing it)			
Bit 5 – 0 : TUNEPOS[13:8] : Current RF frequency (High 5 bit)							

### Register 06h – COUNT<sub>L</sub> – Counter low (Read-Only)

7	6	5	4	3	2	1	0
COUNT[7:0]							
Bit 7 – 0 : COUNT[7:0] : Counter value (Low 8bit)							

### Register 07h – COUNT<sub>H</sub> – Counter High (Read Only)

7	6	5	4	3	2	1	0
COUNT[15:8]							
Bit 7 – 0 : COUNT[15:8] : Counter value (High 8bit)							

### Register 08h – IF<sub>OSC</sub> – DAC for IF OSC (Read/Write)

7	6	5	4	3	2	1	0
IFOSC[7:0]							
Bit 7 – 0 : IFOSC[7:0] : IF Oscillator DAC							

### Register 09h – IF<sub>BW</sub> – DAC for IF – Filter Band width (Read/Write)

7	6	5	4	3	2	1	0
IFBW[7:0]							
Bit 7 – 0 : IFBW[7:0] : IF Band-pass Filter Band DAC							

### Register 0Bh – STEREO<sub>OSC</sub> – DAC for Stereo Decoder OSC (Read/Write)

7	6	5	4	3	2	1	0
SDOSC[7:0]							
Bit 7 – 0 : SDOSC[7:0] : Stereo Decoder Oscillator DAC							

### Register 0Ch – RF<sub>OSC</sub> – DAC for RF OSC (Read/Write)

7	6	5	4	3	2	1	0
RFCAP[7:0]							
Bit 7 – 0 : RFOSC[7:0] : RF Oscillator DAC							

### Register 0Dh – RFCAP – RF Cap bank (Read/Write)

7	6	5	4	3	2	1	0
RFCAP[7:0]							
Bit 7 – 0 : RFCAP[7:0] : RF Oscillator Capacitor bank							

### Register 0Eh – AMCAP1 – AM-ANT Cap bank1 (Read/Write)

7	6	5	4	3	2	1	0
AMCAP[7:0]							
Bit 7 – 0 : AMCAP[7:0] : AM Antenna Capacitor bank							
Note : The AM antenna capacitor bank is composed of 12 bits.							
High 4 bits are arranged in AMCTRL register.

## Register 10h – DO\_REF\_CLK\_CNF – Do output mode and reference clock configuration (Read/Write)

7	6	5	4	3	2	1	0										
IPOL	DO_SEL[1:0]		EXT_CLK_CFG[1:0]		FS_S[2:0]												
Bit 7 :          IPOL : Indicator (DO pin _SD/ST mode) polarity 0 = SD/ST Active Low (The same state change as 13pin – SD pin / 14pin – ST pin ) 1 = SD/ST Active High (State change opposite to 13pin – SD pin / 14pin – ST pin )  Note : This bit doesn't influence the polarity of the serial data.  Bit 6 -5 :      DO_SEL : DO pin select (DO pin output mode select) <table style="margin-left: 40px; margin-top: 10px;"> <thead> <tr> <th style="text-align: center;">DO_SEL[1:0]</th> <th style="text-align: center;">DO pin</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">00</td> <td style="text-align: center;">Serial data output mode</td> </tr> <tr> <td style="text-align: center;">01</td> <td style="text-align: center;">ST pin mode</td> </tr> <tr> <td style="text-align: center;">10</td> <td style="text-align: center;">SD pin mode</td> </tr> <tr> <td style="text-align: center;">11</td> <td style="text-align: center;">Local position confirmation mode</td> </tr> </tbody> </table>								DO_SEL[1:0]	DO pin	00	Serial data output mode	01	ST pin mode	10	SD pin mode	11	Local position confirmation mode
DO_SEL[1:0]	DO pin																
00	Serial data output mode																
01	ST pin mode																
10	SD pin mode																
11	Local position confirmation mode																
DO pin is used by observing the position (Upper heterodyne / Lower heterodyne) of a state of SD pin/ST pin besides the serial data output and local OSC. * The state of DO pin changes synchronizing with SD pin / ST pin when DO_SEL is set to (01b) or (10b). * The state of DO pin changes by the position of Local OSC when DO is set to (11b). Lower heterodyne = 0, Upper heterodyne = 1 * Set DO_SEL to (00b) when you output the serial data.																	
Bit 4 – 3 :      EXT_CLK_CFG[1:0] : External clock setting <table style="margin-left: 40px; margin-top: 10px;"> <thead> <tr> <th style="text-align: center;">EXT_CLK_CFG[1:0]</th> <th style="text-align: center;">Reference clock</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">00</td> <td style="text-align: center;">Off</td> </tr> <tr> <td style="text-align: center;">01</td> <td style="text-align: center;">The external clock is supplied.</td> </tr> <tr> <td style="text-align: center;">10</td> <td style="text-align: center;">32768Hz Crystal oscillation</td> </tr> <tr> <td style="text-align: center;">11</td> <td style="text-align: center;">Unused</td> </tr> </tbody> </table>								EXT_CLK_CFG[1:0]	Reference clock	00	Off	01	The external clock is supplied.	10	32768Hz Crystal oscillation	11	Unused
EXT_CLK_CFG[1:0]	Reference clock
