## LV4900HR — Bi-CMOS LSI Class-D Audio Power Amplifier BTL 10W×2ch

### Overview

The LV4900HR is a 10W per channel stereo digital power amplifier that takes analog inputs. The LV4900H uses unique SANYO-developed feedback technology to achieve excellent audio quality despite being a class D amplifier and can be used to implement high quality flat display panel (FDP) based systems.

### Features

- Supports circuit designs that do not require output LC filters
- BTL output, class D amplifier system
- Unique SANYO-developed feedback technology achieves superb audio quality
- High-efficiency class D amplifier
- Soft muting function reduces impulse noise at power on/off
- Full complement of built-in protection circuits : overcurrent protection, thermal protection, and low power supply voltage protection circuits
- Built-in bootstrap diodes
- Internal oscillator frequencies : channel 1 = 325kHz, channel 2 = 300kHz

### Functions

- 10W output (At  $V_D = 12V$ ,  $R_L = 8\Omega$ ,  $THD + N = 10\%$ )
- 15W output (At  $V_D = 12V$ ,  $R_L = 4\Omega$ ,  $THD + N = 10\%$ )
- Efficiency : 88% ( $V_D = 12V$ ,  $R_L = 8\Omega$ ,  $f_{in} = 1kHz$ ,  $P_O = 10W$ )
- Low  $THD + N$  : 0.15% ( $V_D = 12V$ ,  $R_L = 8\Omega$ ,  $f_{in} = 1kHz$ ,  $P_O = 1W$ , Filter : AES17)
- Noise : 100 $\mu$ Vrms (Filter : A-weight)

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

## Specifications

**Maximum Ratings** at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	VD	Externally applied voltage	15	V
Maximum output current	IO peak		3.75	A/ch
Allowable power dissipation	Pd max	Independent package	886	mW
Operating temperature	Topr		-25 to +75	°C
Storage temperature	Tstg		-50 to +150	°C

**Operating Conditions** at Ta = 25°C

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Recommended supply voltage range	VD	Externally applied voltage	10	12	14	V
Recommended load resistance	RL	Speaker load	4	8		Ω

**Electrical Characteristics** at Ta = 25°C, VD = 12V, RL = 8Ω, L = 22μH, C = 0.33μF

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Standby current	Ist	STBY = L, MUTE = L		13	25	μA
Muting current	Imute	STBY = H, MUTE = L		13.5	20	mA
Quiescent current	ICCO	STBY = H, MUTE = H		60	70	mA
Voltage gain	VG	fin = 1kHz, VO = 0dBm	27	29	31	dB
Output offset voltage	Voffset	Rg = 0	-150		150	mV
Total harmonic distortion	THD@1W	PO = 1W, fin = 1kHz, AES17		0.15	0.5	%
Maximum output	PO1@10%	THD+N = 10%, AES17	8	10		W
Channel separation	CH sep.	Rg = 0, VO = 0dBm, DIN AUDIO	55	70		dB
Ripple rejection ratio	SVRR	fr = 100Hz, Vr = 0dBm, Rg = 0, A-weight	50	65		dB
Noise	VNO	Rg = 0, A-weight		100	300	μVrms
High-level output voltage	VIH	STBY pin and MUTE pin	3			V
Low-level output voltage	VIL	STBY pin and MUTE pin			1	V
Power supply voltage drop protection circuit upper limit value	UV_UPPER	VD pin voltage monitor		8.0		V
Power supply voltage drop protection circuit lower limit value	UV_LOWER	VD pin voltage monitor		7.0		V

Note : The values of these characteristics were measured in the SANYO test environment. The actual values in an end system will vary depending on the printed circuit board pattern, the external components actually used, and other factors.

Block Diagram and Application Circuit Example 1 ( $R_L = 8\Omega$ )

Application Circuit Example 2 ( $R_L = 4\Omega$ )

## Pin Equivalent Circuit

Pin No.	Pin	I/O	Description	Equivalent Circuit
1	PVD1		Channel 1 power system power supply	
2	PVD1		Channel 1 power system power supply	
3	OUT1+	O	Channel 1 high side output	
4	BOOT1+	I/O	Bootstrap I/O pin, channel 1 power supply high side	
5	V <sub>DD</sub> 1	O	Internal power supply decoupling capacitor connection	
6	BOOT1-		Bootstrap I/O pin, channel 1 power supply low side	
7	OUT1-	O	Channel 1 low side output	
8	PGND1		Channel 1 power system ground	
9	PGND1		Channel 1 power system ground	
10	PGND2		Channel 2 power system ground	
11	PGND2		Channel 2 power system ground	
12	OUT2-	O	Channel 2 low side output	
13	BOOT2-	I/O	Bootstrap I/O pin, channel 2 power supply low side

34	V <sub>IN</sub> 1+	I	Channel 1 noninverting input	
35	NC		No connection	
36	STBY	I	Standby mode control	

Note: Smoothing capacitors must be connected to each power supply pin.

## Functional Descriptions

### System Standby

The bias levels are turned on and off under control of the high/low state of the STBY pin. When the STBY pin is low, the bias levels will be turned off, and when that pin is high, the bias levels will be applied.

### Mute Function

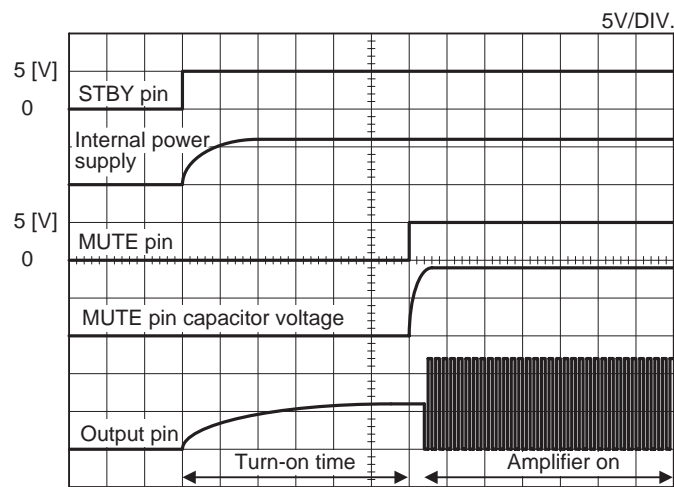

The mute function is provided mainly to mute the output so that impulse noise will not appear in the output when the power supply is being turned on.

#### (1) Output Muting

The output PWM signal can be turned on or off by setting the MUTE pin high or low. When the MUTE pin is low, the internal oscillator is stopped. This oscillator operates at all times that the MUTE pin is high.

#### (2) Power On Sequence

Applications should provide a power-on muting period of at least 500ms to minimize impulse noise.

Turn-on time: the time between the point the STBY pin is set high and the point the MUTE pin is set high.

#### (3) Power Down Sequence

Applications should provide a power down muting period of at least 100ms to minimize impulse noise.

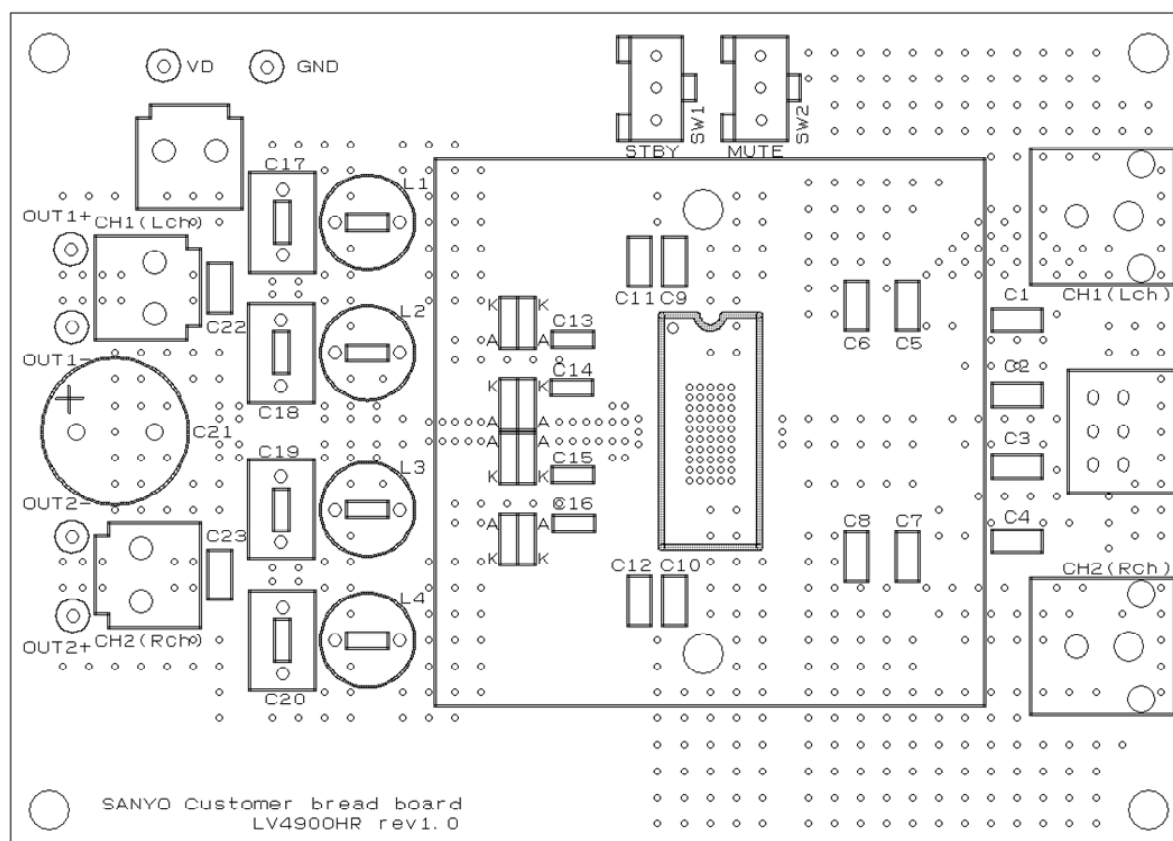

Turn-off time: the time between the point the MUTE pin is set low and the point the STBY pin is set low.

## Silk

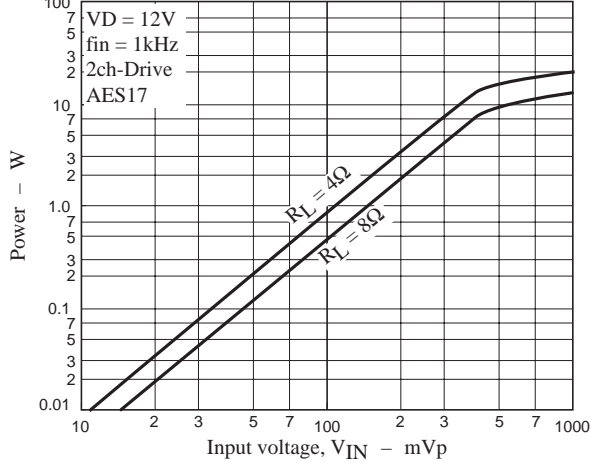

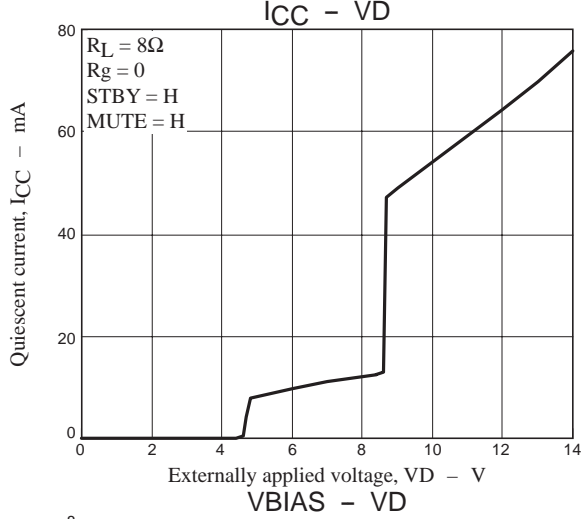

# LV4900HR

## Components

Symbol	Part No.	Function
-----	SW1	Standby switch. Lower position: standby state
-----	SW2	Mute switch. Lower position: mute state
C <sub>VCC</sub>	C1	Internal power supply (V <sub>CC</sub> ) output coupling capacitor
C <sub>BIASCAP</sub>	C2	Internal power supply (VBIAS) input coupling capacitor
C <sub>VBIAS</sub>	C3	Internal power supply (VBIAS) output coupling capacitor
C <sub>MUTE</sub>	C4	Soft muting time constant adjustment capacitor
C <sub>IN</sub>	C5, C6, C7, C8	Input capacitors
* C <sub>VDD</sub>	C9, C10	Internal power supply (V <sub>DD</sub> ) output coupling capacitors
* C <sub>VD</sub>	C11, C12	VD high-frequency attenuation capacitors
* C <sub>BOOT</sub>	C13, C14, C15, C16	Bootstrap capacitor
L <sub>O</sub>	L1, L2, L3, L4	Output low-pass filter coils: $f_c = 1 / (2\pi\sqrt{L_O C_O})$
C <sub>O</sub>	C17, C18, C19, C20	Output low-pass filter capacitors
C <sub>VD</sub>	C21	VD power supply capacitors
C <sub>OUT</sub>	C22, C23	Output for capacitors

\* C<sub>VDD</sub>, C<sub>VD</sub> and C<sub>BOOT</sub>; Each capacitor is arranged in the neighborhood of IC as much as possible.

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
