

DESCRIPTION

Microsemi's GaAs Coplanar PIN Photo Diode chips are ideal for high bandwidth 850nm optical networking applications.

The device family offers superior noise performance and sensitivity in single die, 1x4 array die or 1x12 array die.

The LX304X family of photo diodes are currently offered in die form allowing manufacturers the versatility of custom assembly using either bond wire or flip chip configurations.

This device is ideal for manufacturers of optical receivers, transponders, optical transmission modules and combination PIN photo diode – transimpedance amplifier.
