

DESCRIPTION

The LX6431 series precision adjustable three terminal shunt voltage regulators are pin-to-pin compatible with the industry standard TL431, but with significant improvements. The LX6431 design has eliminated regions of instability common to older generation shunt regulator products like the TL431. Designs are made simpler by eliminating the task of insuring capacitive loads, and output voltage and cathode currents don't combine for unstable operation. The capacitor value is chosen simply to give the best load transient response without the possibility of instability. A lower reference input current allows the use of higher value reference divider resistors, reducing the current drain from batteries in portable

equipment as well as reducing the voltage programming errors due to the impedance of the divider network (See product Highlight)

In addition, the LX6431B has an improved initial accuracy of 0.4%, and the output voltage is programmable by using two external resistors from 2.5V to 36V.

These devices offer low output impedance for improved load regulation. The typical output impedance of these devices is 100mΩ. The reduced reference input bias current and minimum operating currents make these devices suitable for portable and micro power applications.

KEY FEATURES

- Unconditionally Stable for All Cathode To Anode Capacitance Values
- Reduced Reference Input Current Allowing The Use of Higher Value Divider Resistors (0.5μA)
- Initial Voltage Reference Accuracy of 0.4% (LX6431B)
- Sink Current Capability 0.6mA to 100mA
- Typical Output Dynamic Impedance Less Than 100mΩ
- Adjustable Output Voltage From 2.5V to 36V

IMPORTANT: For the most current data, consult MICROSEMI's website: <http://www.microsemi.com>

-40 to 85	2%	LX6431IPK	LX6431IDM	LX6431ILP
	1%	LX6431AIPK	LX6431AIDM	LX6431AILP
	0.4%	LX6431BIPK	LX6431BIDM	LX6431BILP

Note: Available in Tape & Reel. Append the letters "TR" to the part number. (i.e. LX6431CDM-TR)

ABSOLUTE MAXIMUM RATINGS

Cathode to Anode Voltage (V_{KA}).....	-0.3V to 37V
Reference Input Current (I_{REF}).....	-50 μ A to 10 μ A
Continuous Cathode Current (I_K).....	-100mA to 150mA
Operating Temperature Range.....	150 $^{\circ}$ C
Maximum Operating Junction Temperature Plastic (DM & LP Packages).....	150 $^{\circ}$ C
Storage Temperature Range.....	-65 $^{\circ}$ C to 150 $^{\circ}$ C
Package Peak Temp. for Solder Reflow (40 seconds maximum exposure) ...	260 $^{\circ}$ C (+0 -5)

Note: Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground. Currents are positive into, negative out of specified terminal.
Pin numbers refer to DIL packages only.

THERMAL DATA
DM Plastic SOIC 8-Pin

THERMAL RESISTANCE-JUNCTION TO AMBIENT, θ_{JA}	165 $^{\circ}$ C/W
---	--------------------

LP Plastic TO-92 3-Pin

THERMAL RESISTANCE-JUNCTION TO AMBIENT, θ_{JA}	156 $^{\circ}$ C/W
---	--------------------

PK Plastic TO-89 3-Pin

THERMAL RESISTANCE-JUNCTION TO TAB, θ_{JT}	35 $^{\circ}$ C/W
THERMAL RESISTANCE-JUNCTION TO AMBIENT, θ_{JA}	71 $^{\circ}$ C/W

Junction Temperature Calculation: $T_J = T_A + (P_D \times \theta_{JA})$.

The θ_{JA} numbers are guidelines for the thermal performance of the device/pc-board system. All of the above assume no ambient airflow.

APPLICATION INFORMATION

Application Hints

The reference input current of the LX6431 series voltage references is much lower than other similar precision parts. This helps to design programmable voltage references that can use much higher value programming resistors while maintaining the same accuracy as the other precision parts. Figure 7 below shows a 5V, 1% shunt regulator using the LX6431B and a shunt regulator using the TL1431 (Also available from Linfinity). Figure 8 shows 0.5% shunt regulators. Noteworthy are the values of the reference resistors used in the two circuits. With the LX6431B it is possible to use 25k resistors for setting the output voltage with 1% precision as opposed to 5k programming resistors when the same precision needs to be achieved with a TL1431.

FIGURE 7 — Comparison of reference resistor values between an LX6431B and a TL1431, resistors used with the LX6431B are 5 times higher in value.

FIGURE 8 — Comparison of reference resistor values between an LX6431B and a TL1431, when used as 0.5%, 5V shunt regulators.

The output voltage of the reference can be programmed by using the formula below:

$$V_{KA} \cong 2.5 * \left(1 + \frac{R1}{R2} \right)$$

If more accuracy is required then the effects of the input bias current (I_{REF}) must be taken into account. The formula below accounts for the error this current produces.

$$V_{KA} = 2.5 * \left(1 + \frac{R1}{R2} \right) + I_{REF} * R1$$

Smaller values of programming resistors tend to minimize bias current errors. In this respect the low input current characteristics of the LX6431B helps to reduce the power dissipation on the programming resistors by a factor of five compared to other references like the TL1431 and TL431.

The LX6431 series of voltage references have an enhanced circuit design that can tolerate any value of cathode to anode capacitance.
