

m 142 M 142 A

DUAD 80-BIT STATIC SHIFT REGISTER

SINGLE VOLTAGE SUPPLY: V_{CC} = 5V ± 5%
DC to 3 MHz OPERATION GUARANTEED
FULLY TTL COMPATIBLE
FULLY DC OPERATION
SINGLE LINE CLOCK
PIN-FOR-PIN REPLACEMENT for MK 1007P-TMS 3409 - 2532 - 3347
LOW POWER DISSIPATION: 250 mW (TYP.)
INPUT GATE PROTECTION
M142A IS A HIGH SPEED SELECTION

The M142 and M142A are quad 80-bit fully DC shift register constructed on a single chip using very low preshold N-channel silicon gate technology which allows high speed (3 MHz guaranteed) and fully TTL compatibility without using any external resistor.

Each of the four 80-bit registers has an independent input, output and recirculate control. The single **fock** line is common to all four registers.

Fransferring data into the register is accomplished when the clock is high (logic "1") Shifting of data for the clock goes low. Output data appears on the negative going edge of the clock.

then the recirculate line is high, data recirculates, while input is inhibited. When data is entered, the ecirculate line is at logic "0".

Dutput data attain the same logic state that was shifted into the register 80 clocks prior. Available in **I6-lead** dual in-line plastic or ceramic package.

ABSOLUTE MAXIMUM RATINGS*

| cc | Supply voltage | -0.5 to 7 | v |
|-----|-----------------------------|------------|----|
| V. | Input voltage on any pin | -0.5 to 7 | V |
| stg | Storage temperature range | -65 to 150 | °C |
| op | Operating temperature range | 0 to 70 | °C |

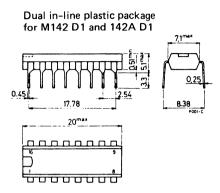

Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other condition above those indicate in the "Recommended operating conditions" section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

RDERING NUMBERS:

- 142 B1 for dual in-line plastic package
- 142 D1 for dual in-line ceramic package
- 142A B1 for dual in-line plastic package
- 142A D1 for dual in-line ceramic package

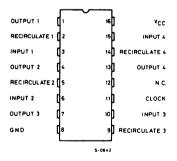

MECHANICAL DATA (dimensions in mm)

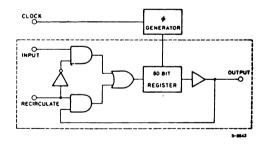

Dual in–line ceramic package for M142 B1 and M142A B1

PIN CONNECTIONS

TRUTH TABLE (positive logic)

| Recirculate | Input | Function | | |
|-------------|------------|----------------|--|--|
| "0" | "0" | "0" is written | | |
| "0" | ″1″ | "1" is written | | |
| "1" | "0" | Recirculate | | |
| "1" | "1" | Recirculate | | |

STATIC ELECTRICAL CHARACTERISTICS ($V_{cc} = 5V \pm 5\%$, $T_{amb} = 0$ to 70°C unless otherwise specified)

| Parameter | | - | | | | |
|-------------------|-----------------------|----------------------------------|------|-----------|-----|------|
| | | Test conditions | Min. | . Typ. Ma | | Unit |
| VIH* | Input high voltage | | 2 | | Vcc | v |
| V _{IL} * | Input low voltage | | -0.3 | | 0.8 | V |
| V _{он} | Output high voltage | I _{OH} = -100 μA | 2.4 | | | v |
| V _{OL} | Output low voltage | I _{OL} = 1.6 mA | | | 0.4 | V |
| 1 _{L1} * | Input leakage current | V _i = V _{CC} | | | 10 | μA |
| lcc | Supply current | | | 48 | | mA |

* These parameters apply to all inputs including clock.

** Typical values at T_{amb} = 25°C and V_{CC} = 5V.

DYNAMIC ELECTRICAL CHARACTERISTICS ($V_{CC} = 5V \pm 5\%$, $T_{amb} = 0$ to 70°C unless otherwise specified)

| | B | Test | Test in distant | | Values | | |
|---------------------------------|-------------------------------|------------------------------------|---------------------------------|-----|--------|------------|----------|
| Parameter | | lest | Test conditions | | Тур. | Max. | Unit |
| f | Clock repetition rate | | | | | 3 | MHz |
| tφ pw1 | Clock high pulse width | | | 110 | | 1 | ns |
| t φ pw0 | Clock low pulse width | | | 220 | | | ns |
| t _r , t _f | Clock rise and fall time | | | | | 5 | μs |
| tsetup | Setup time | | | 100 | - | 1 | ns |
| thold | Hold time | | | 80 | 1 | | ns |
| t _{sR} | Recirculate setup time | | | 100 | | | ns |
