

MITSUBISHI MICROCOMPUTERS M35053-XXXSP/FP

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DESCRIPTION

The M35053-XXXSP/FP is TV screen display control IC which can be used to display information such as number of channels, the date and messages and program schedules on the TV screen.

In particular, owing to the built-in SYNC-SEP (synchronous separation) circuit, the synchronous correction circuit, the Decoder circuit, and to the Encoder circuit, external circuits can be decrease and character turbulence that occurs when superimposing can be reduced. The processor can conform to the EDS broadcast service and is suitable for AV systems such as VTRs, LDs, and so on.

It is a silicon gate CMOS process and M35053-XXXSP is housed in a 20-pin shrink DIP package, M35053-XXXFP is housed in a 20-pin shrink SOP package.

For M35053-001SP/FP that is a standard ROM version of M35053-XXXSP/FP respectively, the character pattern is also mentioned.

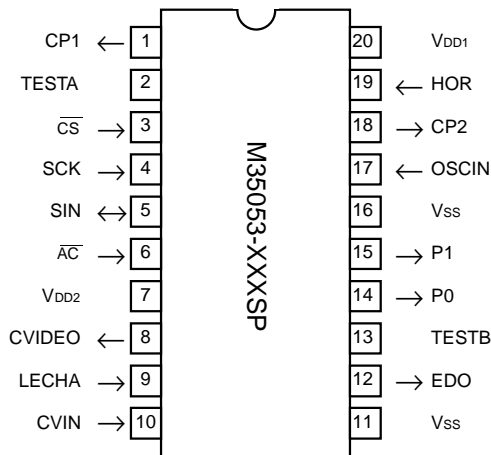

FEATURES

- Screen composition 24 characters X 10 lines,
32 characters X 7 lines
- Number of characters displayed 240 (Max.)
- Character composition 12 X 18 dot matrix
- Characters available 256 characters
- Character sizes available 4 (horizontal) X 4 (vertical)
- Display locations available
Horizontal direction 240 locations
Vertical direction 256 locations
- Blinking Character units
Cycle : approximately 1 second, or approximately 0.5 seconds
Duty : 25%, 50%, or 75%
- Data input By the serial input function (16 bits)
- Coloring
Background coloring (composite video signal)
- Blanking
Total blanking (14 X 18 dots)
Border size blanking
Character size blanking
- Synchronizing signal
Composite synchronizing signal generation
(PAL, NTSC, M-PAL)
- 2 output ports (1 digital line)
- Oscillation stop function
It is possible to stop the oscillation for synchronizing signal generation
- Built-in half-tone display function
- Built-in reversed character display function
- Built-in Decoder (NTSC only)
- Built-in Encoder (NTSC only)
- Built-in synchronous correction circuit
- Built-in synchronous separation circuit

APPLICATION

TV, VCR, Movie

PIN CONFIGURATION (TOP VIEW)

Outline 20P4B

Outline 20P2Q-A

PIN DESCRIPTION

Symbol	Pin name	Input/ Output	Function
OSC1	Clock input	Input	This is the filter output pin 1.
TESTA	Test pin	—	This is the pin for test. Connect this pin to GND during normal operation.
$\overline{\text{CS}}$	Chip select input	Input	This is the chip select pin, and when serial data transmission is being carried out, it goes to "L". Hysteresis input. Includes built-in pull-up resistor.
SCK	Serial clock input	Input	When $\overline{\text{CS}}$ pin is "L", SIN serial data is taken in when SCK rises. Hysteresis input. Built-in pull-up resistor is included.
SIN	Serial data input/ output	Input/ Output	This is the pin for serial input of data and addresses for the display control register and the display data memory. Also, serially outputs decode data according to the settings in the relevant registers (serial I/O).
$\overline{\text{AC}}$	Auto-clear input	Input	When "L", this pin resets the internal IC circuit. Hysteresis input. Includes built-in pull-up resistor.
VDD2	Power pin	—	Please connect to +5V with the analog circuit power pin.
CVIDEO	Composite video signal output	Output	This is the output pin for composite video signals. It outputs 2V _{P-P} composite video signals. In superimpose mode, character output etc. is superimposed on the external composite video signals from CVIN.
LECHA	Character level input	Input	This is the input pin which determines the "white" character color level in the composite video signal.
CVIN	Composite video signal input	Input	This is the input pin for external composite video signals. In superimpose mode, character output etc. is superimposed on these external composite video signals.
Vss	Earthing pin	—	Please connect to GND using circuit earthing pin.
EDO	Encode data output	Output	This is the output pin for encode data. It outputs digital three-value data or composite video signals.
TESTB	Test pin	—	This is the pin for test. Connect this pin to GND during normal operation.
P0	Port P0 output	Output	This pin outputs the port output or BLNK1 (character background) signal.
P1	Port P1 output	Output	This pin outputs the port output or CO1(character) signal.
Vss	Earthing pin	—	Please connect to GND using circuit earthing pin (Analog side).
OSCIN	fsc input pin for synchronous signal generation	Input	This is the input pin for the sub-carrier frequency (fsc) for generating a synchronous signal. A frequency of 3.580MHz is needed for NTSC, and a frequency of 4.434MHz is needed for PAL and 3.576MHz is needed for M-PAL.
CP2	Filter output	Output	Filter output pin 2.
HOR	Horizontal synchro- nizing signal input	Input	This is the input pin for external composite video signals. This pin inputs the external video signal clamped sync-chip to 1.5V, and internally carries out synchronous separation.
VDD1	Power pin	—	Please connect to +5V with the digital circuit power pin.

BLOCK DIAGRAM

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

MEMORY CONSTITUTION

Address 00₁₆ to EF₁₆ are assigned to the display RAM, address F0₁₆ to F8₁₆ are assigned to the display control registers.

The internal circuit is reset and all display control registers (address F0₁₆ to F8₁₆) are set to "0" and display RAM (address 00₁₆ to EF₁₆) are RAM erased when the AC pin level is "L".

Set "0" in any of bits DAD through DAF of addresses 00₁₆ through EF₁₆, and of bits DAE and DAF of addresses F0₁₆ through F8₁₆.

TEST_n (n : a number) is MITSUBISHI test memory, so be sure to observe the setting conditions.

D	LEVEL1	①	Internal bias OFF			Generates bias potential for decoding and synchronous separation.																				
		1	Internal bias ON																							

- Notes 1.** In dealing with the internal synchronization, cut off external video signals outside the IC. The leakage of external input video signals can be avoided.
- 2.** In displaying color superimposition, enter into the OSCIN pin the fsc signal that phase-synchronizes with the color burst of the composite video signals (input to the CVIN pin).
- 3.** Erases all the display RAM. The character code turns to blank-FF16, the encode data bit and the blinking bit turn to "1" respectively, and reversed character bit turns to "0".

Supplemental explanation about display control register

(1) How to effect synchronous separation from composite video signals

Synchronous separation is effected as follows depending on the width of L-level of the vertical synchronous period.

1. Less than $8.4\mu\text{s}$ Not to be determined to be a vertical synchronous signal.
2. Equal to or higher than $8.4\mu\text{s}$ but less than $15.6\mu\text{s}$ When two clocks continue, if take place, it is "L" period is determined to be a vertical synchronization signal.
3. Equal to or higher than $15.6\mu\text{s}$ It is "L" period is determined to be a vertical synchronous signal with no condition.

The determination is made at the timing indicated by V in Fig.3 either in case 2 or in case 3.

Fig. 4 The method of synchronous separation from composite video signal.

(2) Field definition

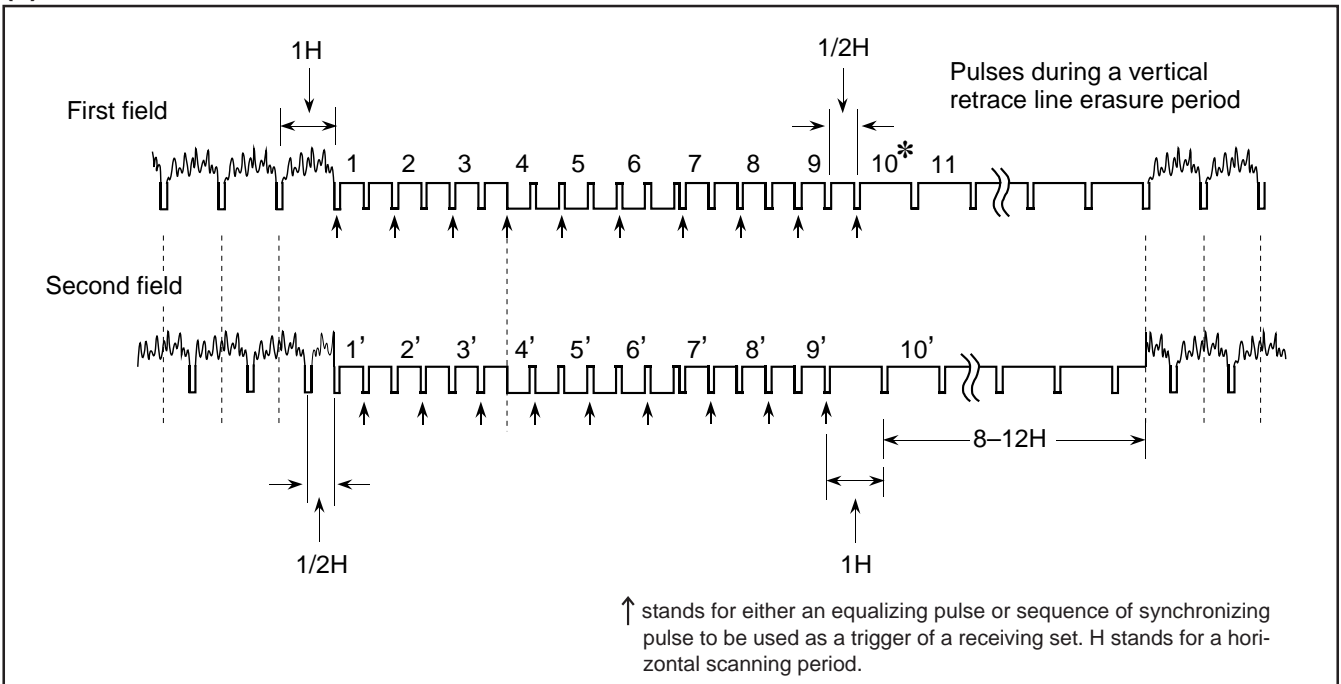

Fig. 5 Field definition

* A horizontal scanning line number corresponds to slice lines DVP4 through DVP0 (address F116) and to encode lines EVP4 through EVP0 (address F216).

(3) Video signal level

VDD : 5.0V, Ta : 25°C

Color	Phase angle (rad)		Brightness level (V)			Amplitude ratio (to color burst)		
	NTSC method	PAL, M-PAL method	Min.	Typ.	Max.	Min.	Typ.	Max.

Fig. 6 Bector phases

(4) Setting RGBON (address F716)

- a) When encode is off EFILD1, 0 (address F316) = 0, 0
 Encode setting ... Not effected
 RGBON = "0" Sets background colors depending on BB, BG, and BR (address F616), screen by screen.
 RGBON = "1" Sets background colors depending on EC2 to EC0 (address 0016 to EF16), character by character. The color setting is shown below.
- b) When encode is on ... EFILD1, 0 (address F316) = 0, 1 or 1, 0
 Encode setting ... Sets encode data depending on EC2 through EC0. (Refer to the encode functions for details.)
 RGBON = "0" Sets background colors depending on BB, BG and BR (address F616) screen by screen.
 RGBON = "1" This setting can not be used.
 (When encode is on, setting RGBON to "1" results in setting both encode data and background colors depending on the same memory (EC2 through EC0), so this setting can not be used.

Color Setting

EC2	EC1	EC0	Color
0	0	0	Black
0	0	1	Red
0	1	0	Green
0	1	1	Yellow
1	0	0	Blue
1	0	1	Magenta
1	1	0	Cyan
1	1	1	White

(5) Port output and BLNK1, CO1 output

Fig. 7 Example of port control

(6) Setting conditions for oscillating or stopping the display clock

	at display clock operating	at display clock stop
STOP1	0	1
DSPON	1	0
CS pin	L	H

STOP1,DSPON (Address F816)

(7) Setting condition at LEVEL0,1

	Operation state (Character display)		Now-working condition (no characters are displayed)
	Internal synchronous	External synchronous	
LEVEL0	1	1	0
LEVEL1	0	1	0

LEVEL0 (address F616), LEVEL1 (address F816)

DISPLAY FORMS

M35052-XXXSP/FP has the following four display forms as the blanking function, when CO1 and BLNK1 are output.

- (1) Character size : Blanking same as the character size.
- (2) Border size : Blanking the background as a size from character.
- (3) Matrix-outline size: Blanking the background as a size from all character font size.
- (4) Matrix-outline border size : Blanking the background as a size from all character font size.
Border display.

This display format allows each line to be controlled independently, so that two kinds of display formats can be combined on the same screen.

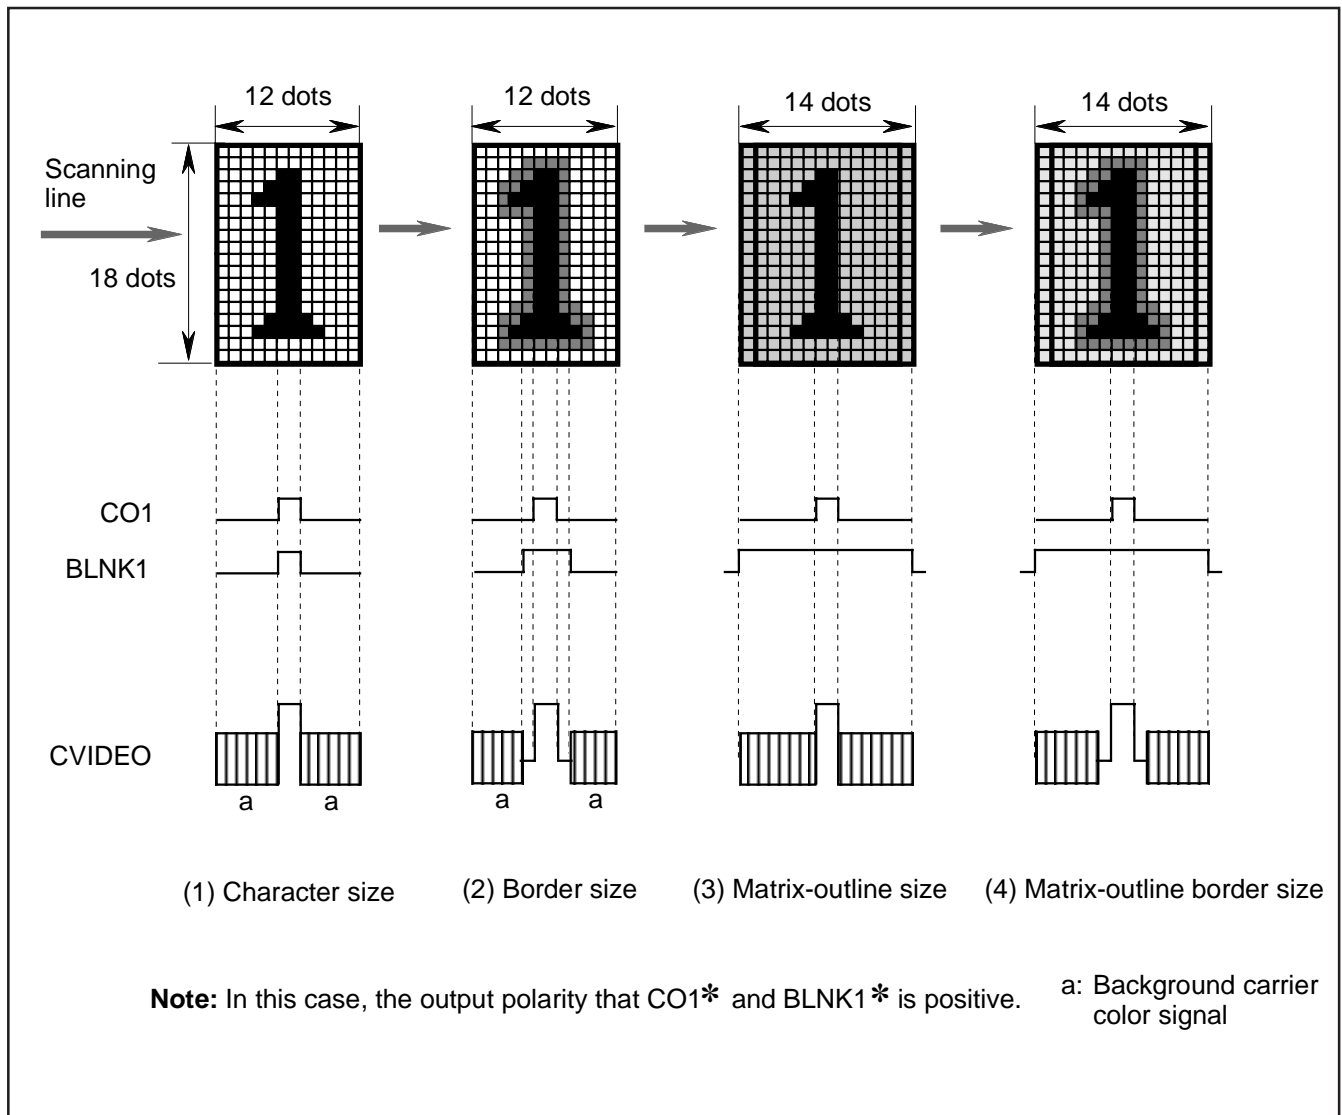

Fig. 8 Display forms at each display mode

DATA INPUT EXAMPLE

Data of display RAM and display control registers can be set by then serial input function. Example of data setting is shown in Figure 9.

Owing to automatic address increment, not necessary to enter addresses for the second and subsequent data.

In automatically, the next of address F8₁₆ is assigned to address 00₁₆.

Fig. 9 shows an example of data serially entered.

Fig. 9 Example of data setting by the serial input function

SERIAL DATA INPUT TIMING

- (1) The address consists of 16 bits.
- (2) The data consists of 16 bits.
- (3) The 16 bits in the SCK after the \overline{CS} signal has fallen are the address, and for succeeding input data, the address is incremented every 16 bits.

Fig. 10 Serial input timing

Output timing of decode data

- (1) Setting "1" in the W/R register activates output mode.
- (2) Outputs decode data in 16 clocks of the SCK after switching over to output mode. (Don't enter the SCK for more than 16 clocks.)
- (3) Raising the \overline{CS} signal deactivates output mode. (To switch over to input mode, cause \overline{CS} to fall.)
- (4) If no data are present, or if data have already been read, 0000₁₆ is output.

Fig. 11 Decode data output timing

Encode functions (effective for NTSC only)

(1) Setting encode data

Setting data code (000 – 111) in EC0 through EC2 (bits DA8 through DAA) of the display RAM (addresses 0 through EF16) encodes. A sample setting and data code are shown below.

Fig. 12 An example of data code setting

(2) Setting addresses

Set encode data in EC0 through EC2 of addresses (that correspond to an extent from the first character to the thirteenth character in each line as appearing on the screen.) Set "111" to EC2 through EC0 of all the addresses in which you set no encode data.

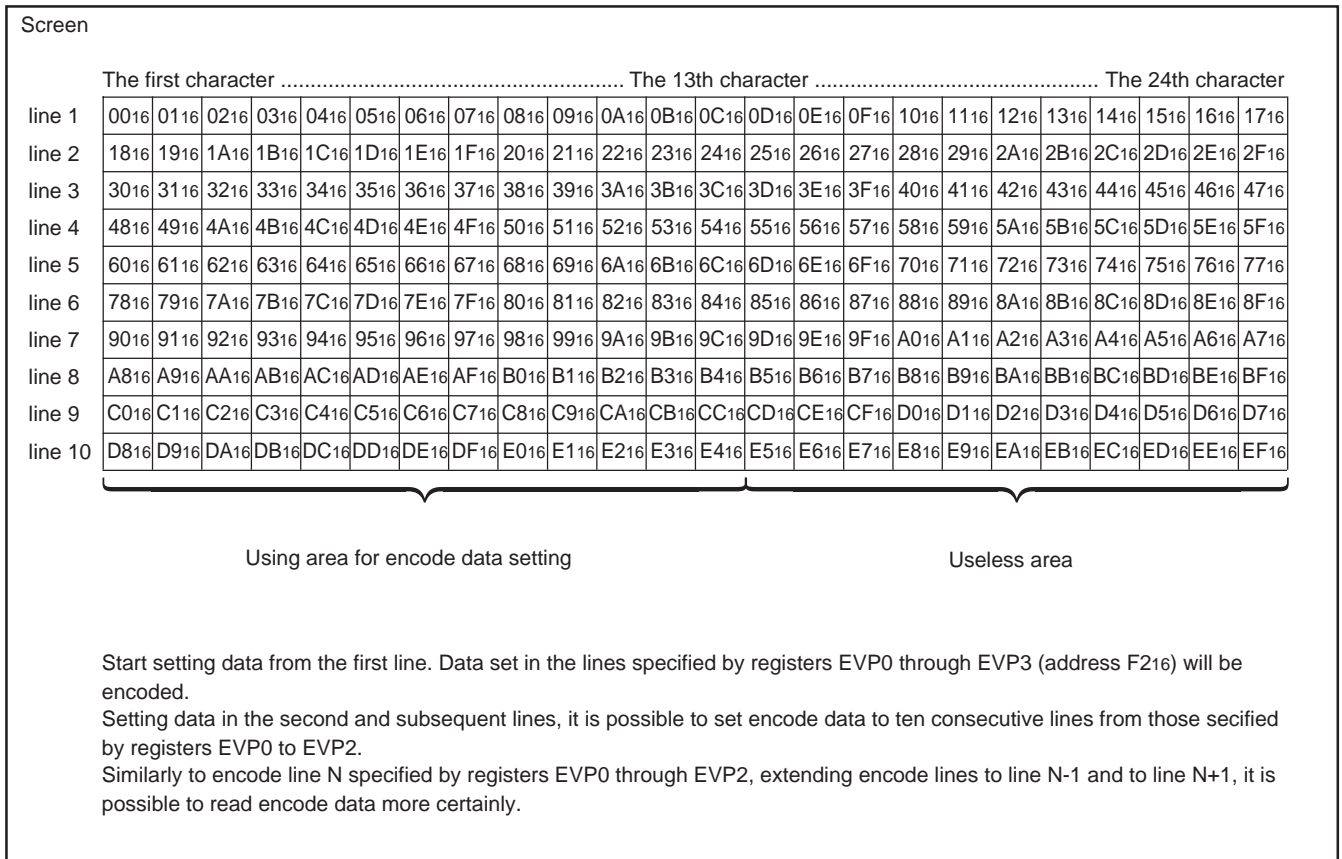

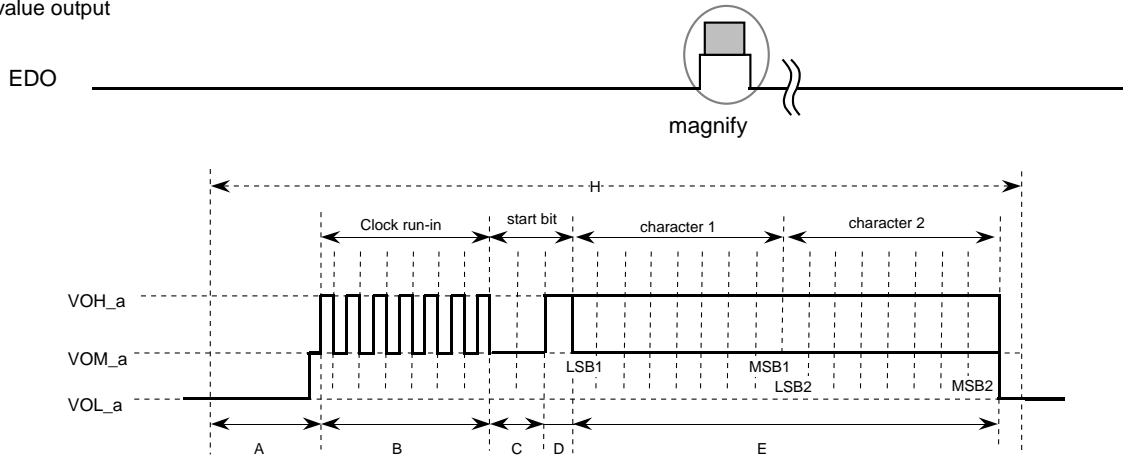

Fig.13 Display monitor

(3) Encode data output

Control encode data (EDO) output by register \bar{D}/V (address F316)

a) Register \bar{D}/V (address F316) = "0"
Digital 3 value output

b) Register \bar{D}/V (address F316) = "1"
Composite video signal output

VDD : 5.0V, Ta : 25°C

Symbol	Min.	Typ.	Max.	Unit	
A	—	$(EHS+9) \times 1/(fH \times 192) \text{ } \mu\text{s}$	—	μs	
B	—	6.5P	—	μs	
C	—	2P	—	μs	
D	—	1P	—	μs	
E	—	16P	—	μs	
H	—	1/fH	—	μs	
(a)	VOH_a	—	5.0	V	
	VOM_a	0.4	2.3	V	
	VOL_a	—	0	V	
(b)	VOH_b	3.1	3.3	3.5	V
	VOM_b	1.9	2.1	2.3	V
	VOL_b	1.3	1.5	1.7	V

$1P = 1/(fH \times 32)$

fH : Horizontal synchronous frequency (MHz)

* It is possible to make a fine adjustment (EHS=16 to 31, 16 settings, in increments of $1/(fH \times 192)$) by use of EHS (registers EHP4 to EHP0 of address F816). (EHS ≤ 15 setting is forbidden.)

Fig. 14 Encode data output

CHARACTER FONT

Images are composed on a 12 X 18 dot matrix, and characters can be linked vertically and horizontally with other characters to allow the display the continuous symbols.

Character code "FF16" is so fixed as to be blank and to have no background, thus cannot assign a character font to this code.

(1) Border display (set by register BLK0, 1 (address F816))

(2) Cursor display (Border display)

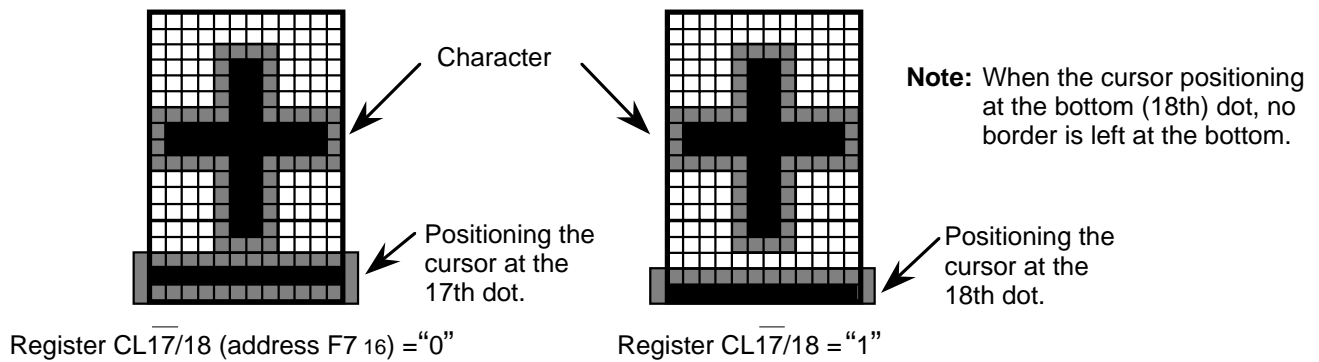

Fig. 15 Character font and border

Precautions

- (1) Points to note in setting the display RAMs
 - a) Be careful to the edges may sway depending on the combination of character's background color and raster color.

Fig. 16 Example of display

- b) If what display exceeds the display area in dealing with external synchronization, (if use double - size characters), set the character code of the addresses lying outside that display area blank code – "FF₁₆".

Fig. 17 Example of display

(2) Before setting registers at the starting of system, be sure to reset the M35052-XXXSP/FP by applying "L" level to the $\bar{A}C$ pin.

(3) Power supply noise

When power supply noise is generated, the internal oscillator circuit does not stabilize, whereby causing horizontal jitters across the picture display. Therefore, connect a bypass capacitor between the power supply and GND.

(4) Synchronous correction action

When switching channel or in the special playback mode (quick playback, rewinding, and so on) of VTR, effect of synchronous correction becomes strong, and distortion of a character is apt to occur because the continuity of video signal is suddenly switched. When the continuity of video signal is out of order, erasure of displayed characters is recommended in a extreme short time to raise the quality of displayed characters.

(5) Notes on fsc signal input

This IC amplifies the subcarrier frequency (fsc) signal (NTSC, M-PAL system: 3.58MHz, PAL system: 4.43MHz) input to the OSCIN pin (17-pin) and generates the composite video signal internally. The amplified fsc signal can be destabilized in the following cases.

- a) When the fsc signal is outside of recommended operating conditions.
- b) When the waveform of the fsc signal is distorted.
- c) When DC level in the fsc waveform fluctuates.

When the amplified signal is unstable, the composite video signal generated inside the IC is also unstable in terms of synchronization with the subcarrier and phase.

Consequently, this results in color flicker and lost synchronization when the composite video signal is generated. Make note of the fact that this may prevent a stable blue background from being formed.

(6) Forbidding to stop entering the fsc signal

This IC doesn't properly work if the fsc signal is not entered into the OSCIN pin (pin 17), so don't stop the fsc signal so as to work the IC. To stop the IC, turn the display off (set 0 in the register DSPON (address F816).)

(7) Forbidding to set data during the period in which the internal oscillation circuit stabilizes

- a) To start entering the fsc signal when its input is stopped.
- b) To start oscillating the oscillation circuit for display when its oscillation is stopped. (to assign "1" to the register STOP1 (address F816) when it is assigned "0", or the like.)
- c) To turn on the internal bias when it is turned off. (to assign "1" to the register LEVEL1 (address F816) when it is assigned "0".)

There can be instances in which data are not properly set in the registers until the internal oscillation circuit stabilizes, so follow the steps in sequence as given below.

- 1) Set "0" in the register DSPON (address F816). (the display is turned off)
- 2) Effect the settings a), b), and c) given above.

3) Wait 20 ms (the period necessary for the internal oscillation circuit to stabilize) before entering data.

4) Set necessary data in other registers, and make the display RAM ready.

M35053-XXXSP/FP PERIPHERAL CIRCUIT

Fig. 18 M35053-XXXSP/FP example of peripheral circuit

TIMING REQUIREMENTS ($T_a = -20^{\circ}\text{C}$ to 70°C , $V_{DD} = 5 \pm 0.25\text{V}$, unless otherwise noted)

Symbol	Parameter	Limits			Unit
		Min.	Typ.	Max.	
$t_w(\text{SCK})$	SCK width	400	–	–	ns
$t_{su}(\overline{\text{CS}})$	$\overline{\text{CS}}$ setup time	200	–	–	ns
$t_h(\text{CS})$	$\overline{\text{CS}}$ hold time	2	–	–	μs
$t_{su}(\text{SIN})$	SIN setup time	200	–	–	ns
$t_h(\text{SIN})$	SIN hold time	200	–	–	ns
t_{word}	1 word writing time	12.8	–	–	μs

Note. When oscillation stop at register STOR1 (address F816), 1V (field term) or more of $t_{su}(\text{CS})$ and $t_h(\text{CS})$ are needed.

Fig. 19 Serial input timing requirements

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

ABSOLUTE MAXIMUM RATINGS ($V_{DD} = 5V$, $T_a = -20$ to $70^{\circ}C$, unless otherwise noted)

Symbol	Parameter	Conditions	Ratings	Unit
VDD	Supply voltage	With respect to V_{SS}	-0.3~6.0	V
V _I	Input voltage		$V_{SS}-0.3 \leq V_I \leq V_{DD}+0.3$	V
V _O	Output voltage		$V_{SS} \leq V_O \leq V_{DD}$	V
P _d	Power dissipation	$T_a=25^{\circ}C$	300	mW
T _{opr}	Operating temperature		-20~70	$^{\circ}C$
T _{stg}	Storage temperature		-40~125	$^{\circ}C$

RECOMMENDED OPERATING CONDITIONS ($V_{DD} = 5V$, $T_a = -20$ to $70^{\circ}C$, unless otherwise noted)

Symbol	Parameter	Limits			Unit	
		Min.	Typ.	Max.		
VDD	Supply voltage	4.75	5.00	5.25	V	
V _{IH}	"H" level input voltage A C, CS, SIN, SCK, TESTA, TESTB	$0.8 \times V_{DD}$	V_{DD}	V_{DD}	V	
V _{IL}	"L" level input voltage A C, CS, SIN, SCK, TESTA, TESTB	0	0	$0.2 \times V_{DD}$	V	
V _{CVIN}	CVIN, HOR	-	2.0V _{P-P}	-	V	
V _{OSCIN}	Input voltage OSCIN (Note 1)	0.3V _{P-P}	-	4.0V _{P-P}	V	
f _{OSCIN}	Synchronous signal oscillation frequency (Duty 40~60%)	-	3.580 4.434 3.576	-	MHz	
f _{OSC1}	Display oscillation frequency	24 characters X 10 lines	-	480Xf _H (Note 2)	-	MHz
f _{OSC2}		32 characters X 7 lines	-	640Xf _H (Note 2)	-	MHz

Notes 1. Noise component is within 30mV.

2. f_H: Horizontal synchronous frequency (MHz).

ELECTRICAL CHARACTERISTICS ($V_{DD} = 5V$, $T_a = 25^{\circ}C$, unless otherwise noted)

Symbol	Parameter	Test conditions	Limits			Unit
			Min.	Typ.	Max.	
VDD	Supply voltage	$T_a=-20 \sim 70^{\circ}C$	4.75	5.00	5.25	V
I _{DD}	Supply current	$V_{DD}=5.00V$	-	30	50	mA
V _{OH}	"H" level output voltage P0, P1, SIN	$V_{DD}=4.75V$, $I_{OH}=-0.4mA$	3.75	-	-	V
V _{OL}	"L" level output voltage P0, P1, SIN	$V_{DD}=4.75V$, $I_{OL}=0.4mA$	-	-	0.4	V
R _i	Pull-up resistance AC, CS, SCK, SIN, TESTB	$V_{DD}=5.00V$	10	30	100	k Ω
V _{OH_a}	"H" level output voltage EDO	$V_{DD}=5.00V$, $I_{OH}=-0.04mA$	4.0	-	-	V
V _{OM_a}	"M" level output voltage EDO	$V_{DD}=5.00V$, $I_{OM}=\pm 0.04mA$	0.4	2.3	4.0	V
V _{OL_a}	"L" level output voltage EDO	$V_{DD}=5.00V$, $I_{OL}=0.04mA$	-	-	0.4	V

VIDEO SIGNAL INPUT CONDITIONS ($V_{DD} = 5V$, $T_a = -20$ to $70^{\circ}C$, unless otherwise noted)

Symbol	Parameter	Test conditions	Limits			Unit
			Min.	Typ.	Max.	
V _{IN-SC}	Composite video signal input clamp voltage	Sync-chip voltage	-	1.5	-	V

Note for Supplying Power

(1) Timing of power supplying to \overline{AC} pin

The internal circuit of M35052-XXXSP/FP is reset when the level of the auto clear input pin \overline{AC} is "L". This pin is hysteresis input with the pull-up resistor. The timing about power supplying of \overline{AC} pin is shown in Figure 20. t_w is the interval after the supply voltage becomes $0.8 \times V_{DD}$ or more and before the supply voltage to the \overline{AC} pin ($V_{\overline{AC}}$) becomes $0.2 \times V_{DD}$ or more.

After supplying the power (V_{DD} and V_{SS}) to M35052-XXXSP/FP, the t_w time must be reserved for 1ms or more. Before starting

input from the microcomputer, the waiting time (t_s) must be reserved for 500ms after the supply voltage to the \overline{AC} pin becomes $0.8 \times V_{DD}$ or more.

(2) Timing of power supplying to V_{DD1} pin and V_{DD2} pin

The power need to supply to V_{DD1} and V_{DD2} at a time, though it is separated perfectly between the V_{DD1} as the digital line and the V_{DD2} as the analog line.

Fig. 20 Timing of power supplying to \overline{AC} pin

PRECAUTION FOR USE

Notes on noise and latch-up

Connect a capacitor (approx. $0.1 \mu F$) between pins V_{DD} and V_{SS} at the shortest distance using relatively thick wire to prevent noise and latch up.

ROM ORDERING METHOD

Please submit the information described below when ordering Mask ROM.

- (1) ROM Order Confirmation Form 1
- (2) Data to be written into mask ROM EPROM
(three sets containing the identical data)
- (3) Mark Specification Form 1
- (4) Program for character font generating + floppy disk in which character data is input

STANDARD ROM TYPE : M35053-001SP/FP

M35053-001SP/FP is a standard ROM type of M35053-XXXSP/FP character patterns are fixed to the contents of Figure 21 to 24.

Keep safety first in your circuit designs!

- Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

- These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
- Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
- All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.
- The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors. Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (<http://www.mitsubishichips.com>).
- When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
- Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
- The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
- If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
- Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
