

M51564P**OPTICAL PICKUP SERVO CONTROL****DESCRIPTION**

The M51564P is a semiconductor integrated circuit built-in the logic control, servo amplifier and switches required for servo control of CD player pickup.

FEATURES

- The amplifier, switches and logic control, all requirements for optical pickup servo control, are accommodated in a single chip
- Built-in the focus search circuit capable of auto search in both upward and downward directions
- Built-in the serial-parallel data conversion circuit, which alleviates load on the microcomputer
- Is highly applicable to a wide variety of pickup because of variable gain and frequency characteristics accomplished only by changing external parts
- Built-in the Vcc/2 generation circuit so as to permit the use of either double or single power source

**RECOMMENDED OPERATING CONDITIONS**

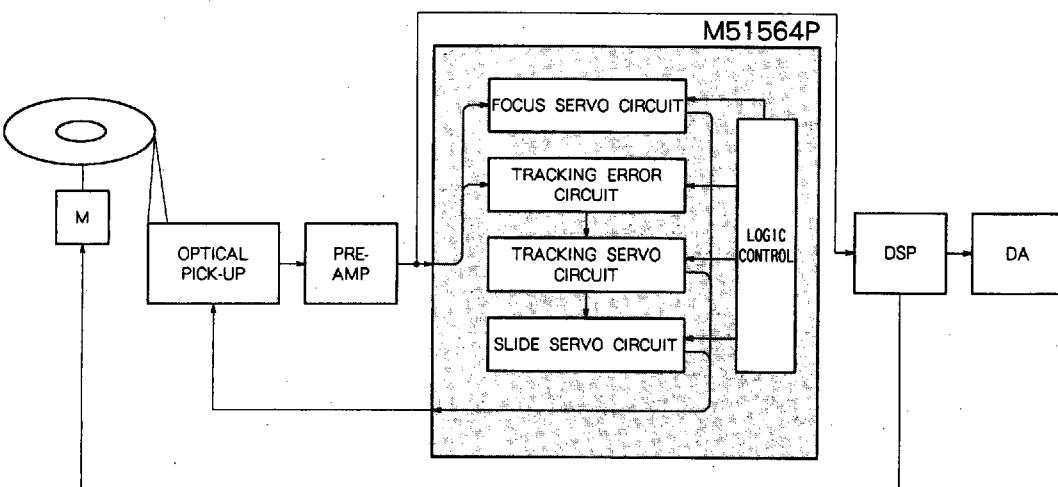

Supply voltage range V_{CC}, V_{EE} = ± 4.75 to ± 5.25V
or V_{CC} = 4.75 to 5.25V

Rated supply voltage V_{CC}, V_{EE} = ± 5V (double power source)
or V_{CC} = + 5V (single power source)

Rated power dissipation 70mW

OPTICAL PICKUP SERVO CONTROL

BUILT-IN FUNCTIONS

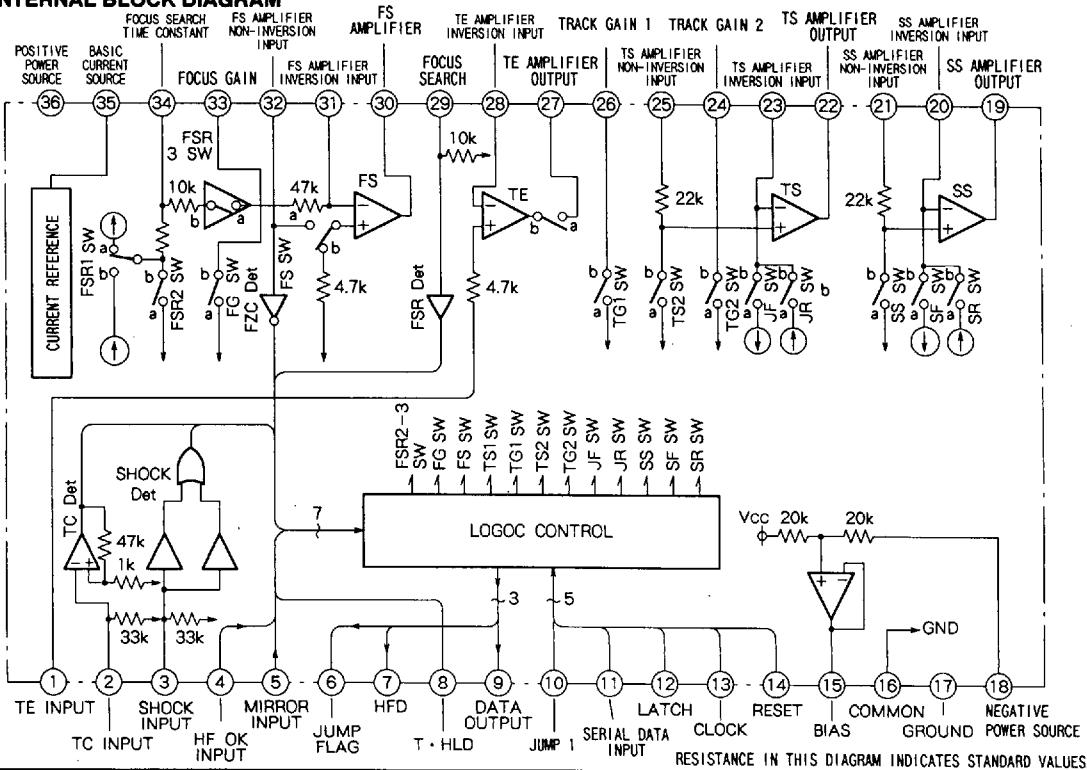

- Focus servo amplifier : FS (Focus Servo Amp.)
- Tracking error amplifier : TE (Tracking Error Amp.)
- Tracking servo amplifier : TS (Tracking Servo Amp.)
- Slide servo amplifier : SS (Slide Servo Amp.)
- Jump and brake switch circuits :
 - TS1 SW, TS2 SW (Tracking Servo Switches)
 - TG1 SW, TG2 SW (Tracking Gain Switches)
 - JF SW, JR SW (Jump Forward/Reverse Switches)
 - SS SW (Slide Servo Switches)
 - SF SW, SR SW (Slide Forward/Reverse Switches)
- Focus search circuit :
 - Focus search switch (FSR1, FSR2, FSR3, FS, FG)
 - Focus search switch (FZR Det)
 - Focus zero cross detector (FZC Det)
- Track cross detector : TC Det (Track Cross Detector)
- Shock detector : Shock Det (Shock Detector)
- Logic controller :
 - Serial→parallel data conversion circuit
 - Jump, brake and focus search controls
- Vcc/2 generation circuit

OPTICAL PICKUP SERVO CONTROL

PIN DESCRIPTION

Pin No.	Symbol	Block	I/O	Function
①	TE IN	Pre-amplifier input	I	Input terminal for tracking error signals
②	TC IN		I	Input terminals for track cross signals
③	SHOCK IN		I	Input terminals into the shock detection circuit
④	HF OK		I	Input terminals for HF OK signals
⑤	MR		I	Input terminals for disc mirror surface detection signals
⑥	Jump Flag	Output to the pre-amplifier	O	Outputs "H" in jump modes such as TS OFF, JF JR, and BRAKE
⑦	HFD		O	HFD="H" when MR input="H" and when track servo loop is OFF(TS OFF, JF, and JR)
⑧	T · HLD	Track servo	I	Direct control terminal for When T-HLD = "H", TS1SW = "b"; TS1SW When T-HLD = "L", controller command prevails
⑨	DATA OUT	Microcomputer I/O	O	Interior condition output corresponding to microcomputer commands
⑩	JPT		I	Control signal for track jump brake pulses. Normally "H"
⑪	MSD		I	Microcomputer serial data Transfers serial data from microcomputer to servo IC. LSB first. 8-bit data
⑫	MLA		I	Latches serial data from microcomputer to servo IC. Transfers data when this falls
⑬	MCK		I	Clock for serial data transfer from microcomputer to servo IC. Uptakes data at the rising edge
⑭	ACLR		I	All cleared. Resets all internal registers and flip-flops with signal "L"
⑮	Bias	Power source	O	When power source is single, this outputs Vcc/2 bias power
⑯	COM		I	COMMON terminal. Connected to GND when positive and negative power is supplied, and to BIAS when power source is single
⑰	GND		I	GND
⑱	VEE		I	Negative power terminal. Connected to GND when power source is single
⑲	SS OUT	Slide servo	O	Operation amplifier SS output
⑳	SS⊖		I	Operation amplifier SS inversion input
㉑	SS⊕		I	Operation amplifier SS non-inversion input
㉒	TS OUT	Track servo	O	Operation amplifier TS output
㉓	TS⊖		I	Operation amplifier TS non-inversion input
㉔	TG2		-	Output of track/gain selector switch TG2. Made open or takes common level
㉕	TS⊕		I	Operation amplifier TS non-inversion input
㉖	TG1		-	Output of track/gain selector switch TG1. Made open or takes common level
㉗	TE OUT		O	Operation amplifier TE output
㉘	TE⊖		I	Operation amplifier TE inversion output
㉙	FSR IN	Focus servo	I	Input into focus search voltage level detector
㉚	FS OUT		O	Operation amplifier FS output
㉛	FS⊖		I	Operation amplifier FS inversion output
㉜	FS⊕		I	Operation amplifier FS non-inversion output
㉝	FG		-	Output of focus/gain selector switch FG. Made open or takes common level
㉞	C · FSR		-	Connects the capacitor determining the time constant of focus search waveform
㉟	I-ref	Constant-current source	I	Terminal to connect current setting resistors of reference current source
㉟	Vcc	Power source	I	Terminal for positive power source

ABSOLUTE MAXIMUM RATINGS (Ta = 25°C, unless otherwise noted)

Symbol	Parameter	Ratings	Unit
Vcc	Supply voltage	+ 6.5	V
		- 6.5	V
Vi	Input voltage Absolute value	Applied supply voltage + 0.3	V
Vo	Output voltage Absolute value	Applied supply voltage + 0.3	V
Pd	Power dissipation	560	mW
Topr	Operating temperature	- 20 to + 75	°C
Tstg	Storage temperature	- 40 to + 125	°C

RECOMMENDED OPERATING CONDITIONS (Ta = 25°C)

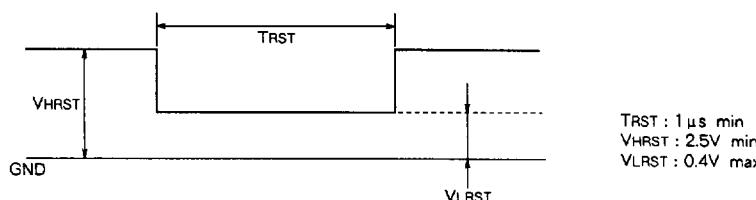

Symbol	Parameter	Test conditions	Limits			Unit
			Min	Typ	Max	
Vcc	Supply voltage	(±) and single power sources	+ 4.75	+ 5.0	+ 5.25	V
		(±) power source	- 5.25	- 5.0	- 4.75	V
ViH	Input voltage ("H" level)		2.5	-	Vcc	V
ViL	Input voltage ("L" level)		0	-	0.4	V

OPTICAL PICKUP SERVO CONTROL

Note 1. Before taking measurements, whichever of the above, input the reset pulse as shown in the diagram below into terminal $\#1$ ACLR after turning power on.

OPTICAL PICKUP SERVO CONTROL

FUNCTION DESCRIPTION

Setting the built-in constant-current source current level

Focus search (FSR), tracking servo (TS), and slide motor servo (SS) can be set via resistor Rx connected across terminal ⑩ to Vcc.

The current level of the constant-current source for FSR, TS and SS can be set via resistor Rx connected across terminal ⑩ to Vcc.

Let the absolute values of the constant-current source current levels for FSR, TS, SS be Ifsr, Its, Iss, respectively. Then

$$Ifsr \approx \frac{1}{8} \cdot \frac{Vcc - V_{\phi}}{Rx}$$

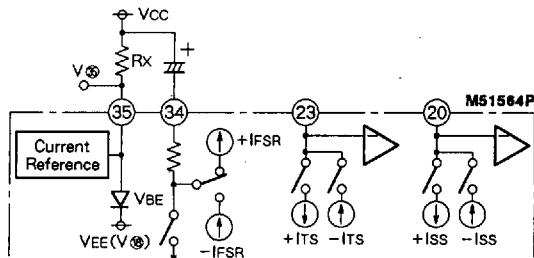

$$Its \approx \frac{1}{8} \cdot \frac{Vcc - V_{\phi}}{Rx}$$

$$Iss \approx \frac{1}{4} \cdot \frac{Vcc - V_{\phi}}{Rx}$$

where V_{ϕ} is voltage at terminal ⑩. Let voltage at terminal ⑩ (VEE) be V_{ϕ} . Then V_{ϕ} can be obtained

$$V_{\phi} = V_{\phi} + V_{BE} \quad (V_{BE} \approx 0.7V \text{ as standard})$$

Constant-current source block diagram

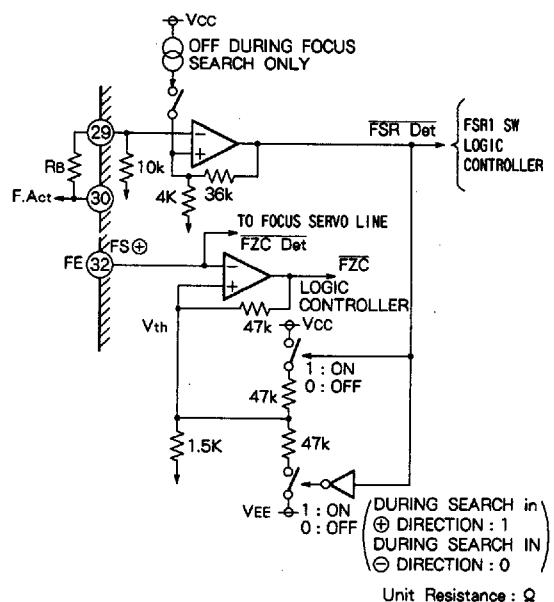

FSR detector

Current is input from FS OUT (terminal ⑩ output) via resistors or the driver and resistors into FSR IN (terminal ⑩ input). The following are performed during focus search :

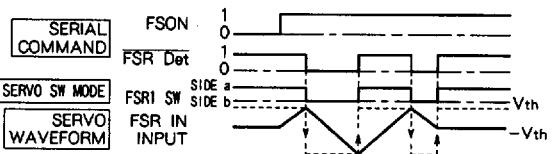

- Automatic switching of focus search direction
- Automatic switching of FZC detection polarity

Focus search always begins from the \oplus side. The polarity of focus search voltage (\oplus or \ominus) is switched by FSR DET signal via FSR1 SW.

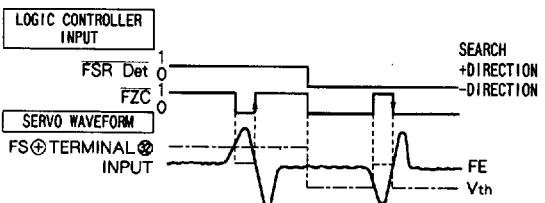

Equivalent circuit

FSR det operation timing chart

FZC Operation timing chart

INPUT		OUTPUT		
FSR IN level	Vin	FSR Det	FSR1 SW mode	FZC Vth level
Vin < Vth	0	Side b : \ominus search voltage developed	Rise Fall	0 - 0.30(V)
Vin > Vth	1	Side a : \oplus search voltage developed	Rise Fall	0.30 0(V)

FZC Vth level is the value when the power source is $\pm 5V$.

OPTICAL PICKUP SERVO CONTROL

Setting the focus search voltage and jump pulse and slide feed voltages

(power source : $\pm 5V$; $R_x = 47k\Omega$)

Setting the focus search voltage

Setting the FSR waveform maximum level V_{FS}

(determination of R_B)

$$V_{FS} = \frac{R_A + R_B}{R_A} V_{FSR} \dots\dots\dots (1)$$

$$\therefore R_B = R_A \left(\frac{V_{FS}}{V_{FSR}} - 1 \right)$$

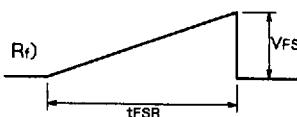

$$= 10 \times 10^3 \left(\frac{V_{FS}}{0.5} - 1 \right) (\Omega)$$

$\left(\begin{array}{l} V_{FSR} : \text{FSR Det threshold value } \pm 0.5V \\ R_A : \text{FSR IN } \otimes \text{ input resistance } 10k\Omega \\ R_B : \text{FSR IN } \otimes \text{ external resistance} \end{array} \right)$

Setting FSR time t_{FSR} (determination of C_{FSR} and R_f)

$$t_{FSR} = \frac{C_{FSR}}{I_{FSR}} - \frac{R_s'}{R_f} V_{FS} \dots\dots\dots (2)$$

$\left(\begin{array}{l} R_s : \text{FS } \otimes \text{ terminal } ③ \text{ internal resistance } 47k\Omega \\ R_f : \text{FS Amp external feedback resistance} \\ C_{FSR} : \text{C. FSR terminal } \otimes \text{ external capacitor} \\ I_{FSR} : \text{focus search current } \pm 25\mu A \end{array} \right)$

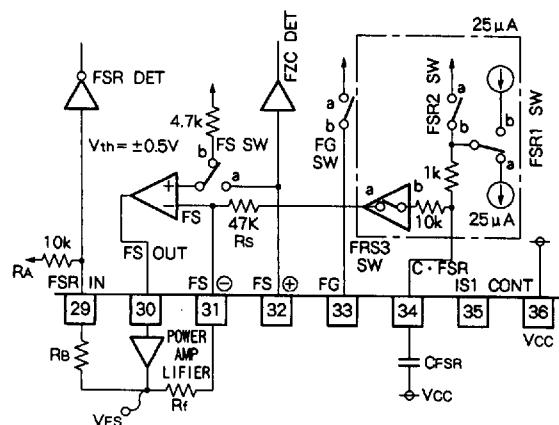

Setting jump pulse and slide feed voltages

- Jump pulse voltage V_{JF}

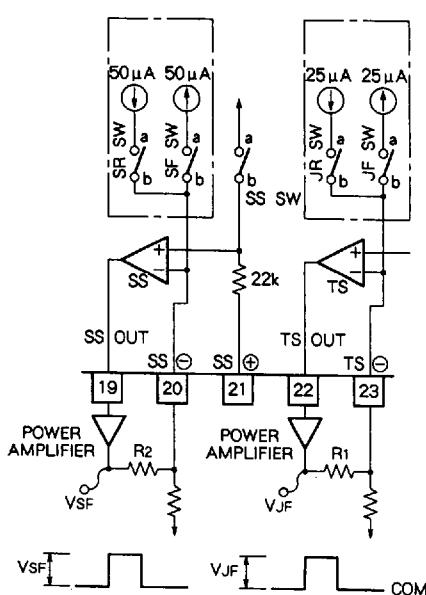

$$V_{JF} = R_1 \times 25\mu A$$

- Slide feed voltage V_{SF}

$$V_{SF} = R_2 \times 50\mu A$$

Note. Resistances in the diagram indicate standard values.
Current and voltage values are those when the power source is $\pm 5V$ and $R_x = 47k\Omega$.

OPTICAL PICKUP SERVO CONTROL

Functions of serial command

The logic controller has in itself a 8-bit shift register, which converts (or decodes) serial data from the microcomputer (input into MSD terminal ⑪) into commands for the servo IC.

Data-IN

The upper four bits (D₇ to D₄) of 8-bit data can set the

command mode, and the lower four (D₃ to D₀) the command state.

Commands in the same mode can be used at the same time within a data transfer and remains as set until new data is input. Thus the command state does not change even if other modes are chosen.

Serial command function table (X = "1" or "0")

Mode	Input into Data IN terminal ⑪								Output from Data OUT terminal ⑫
	Mode selection				Command state setting				
	D ₇	D ₆	D ₅	D ₄	D ₃	D ₂	D ₁	D ₀	
FOCUS	0	0	0	0	FS ON	FG	FSR EN	x	FS OK
TRACK1 { A B. }	0	0	0	1	SHOCK A	BRAKE A	TG2	TG1	SHOCK OUT
				1	SHOCK B	BRAKE B			
TRACK2	0	0	1	0	TRACK		SLIDE		TC
SERVO OFF	0	1	x	x	x	x	x	x	0
STOP	1	1	x	x	x	x	x	x	0

Note 2. TRACK1 modes 1 and 2 are the same. TG2 and TG1 command states can be set in both TRACK1 A and B modes.

TRACK1 mode A or B determines SHOCK and BRAKE mode A or B. When either A or B is set to "1", the other is automatically released to "0".

SHOCK and BRAKE A and B can be released via TRACK1 A and B.

3. The states of command TRACK (D₃, D₂) and SLIDE (D₁, D₀) in TRACK2 mode are set in 2 bits each.

4. Output from Data OUT terminal ⑫ is automatically switched when the mode is switched.

5. 1 x x x x x x is used for the command sent to the signal processing LSI, M50422P. During use of this command, the servo IC remains held, or unchanged, retaining the hold condition.

Command function table

Command	Mode	Data		Functions		
FS ON	FOCUS	D ₃	1 ON	Starts focus search and turns focus on		
			0 OFF			
FG		D ₂	1 CLOSE	Open/close focus gain selector switch, FG SW		
			0 OPEN			
FSR EN		D ₁	1 INHIBIT	Prohibits automatic focus re-intake D ₁ = "1" actuates prohibition		
			0 ENABLE			
SHOCK A	TRACK1 A	D ₃	1 ON	Inverts TG1 and TG2 SW's via shock detection (Shock OUT = "1")		
			0 OFF			
SHOCK B	TRACK1 B	D ₃	1 ON	Prohibits TG1 and TG2 SW inversion when SHOCK A function + MR input = 1 (this is provided as remedy for flaws)		
			0 OFF			
BRAKE A	TRACK1 A	D ₂	1 ON	Provides jump brake (setting) operation Open/closes TS2 SW		
			0 OFF			
BRAKE B	TRACK1 B	D ₂	1 ON	Provides jump brake (setting) operation Open/closes TS1 SW		
			0 OFF			
TG2	TRACK1	D ₁	1 OPEN	Controls track gain selector switch, TG2 SW		
			0 CLOSE			
TG1	TRACK1	D ₀	1 OPEN	Controls track gain selector switch, TG1 SW		
			0 CLOSE			
TRACK	TRACK2	D ₃	D ₂			
		0	0	TS OFF	Track servo OFF	
		0	1	TS ON	Track servo ON	
		1	0	JF	Forward jump	
		1	1	JR	Reverse jump	

For the states of TS1, TS2, JF and JR SW's, refer to the Track Function Table

■ 6249826 0021753 027 ■

OPTICAL PICKUP SERVO CONTROL

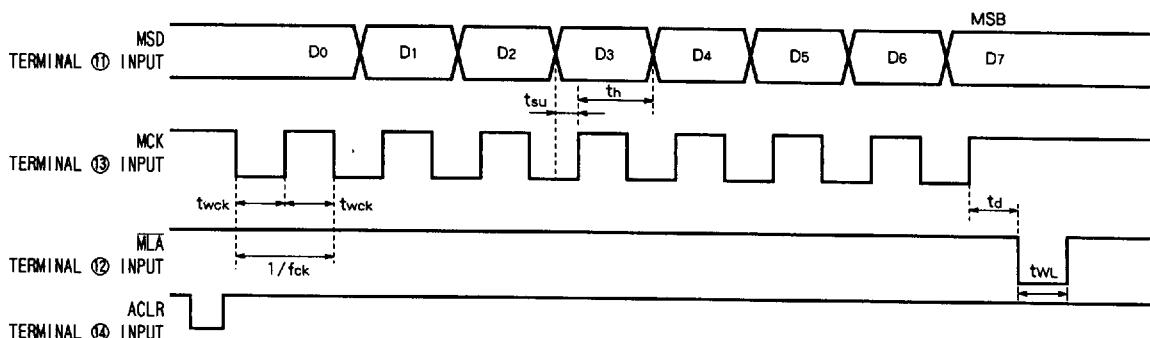

Command function table (Cont.)

Command	Mode	Data	Functions
SLIDE	TRACK2	D1 D0	
		0 0 SS OFF	Slide servo OFF
		0 1 SS ON	Slide servo ON
		1 0 SF	Forward slide
		1 1 SR	Reverse slide
	SERVOOFF		Resets data D0 to D3 to "0"
	STOP		Resets data D0 to D3 to "0" (this command is common to the signal processing LSI, M50422P)

Serial data (MSD) transfer method

With data transferred by "LSD first", sending MLA signal, the command is executed.

Serial data input timing chart

Logic input conditions

Symbol	Parameter	Test conditions	Limits			Unit
			Min	Typ	Max	
fck	Clock frequency		—	50	125	kHz
twck	Clock pulse width		4	20	—	μs
tsu	Set-up time		0.1	0.2	—	μs
th	Hold time		4	20	—	μs
td	Delay time		4	20	—	μs
twl	Latch pulse width		1	5	—	μs

BRAKE's A and B

With BRAKE A or B command set to "1", jump Brake operation begins, improving the jump setting ability after track jump.

Jump brake operation

- When MR = 1 (terminal ⑤ input), TC = "↑ or ↓" (TC Detoutput rise or fall) turns the track servo loop OFF.
- When MR = 0, TC = "↑ or ↓" turns the track servo loop ON.

Jump brake truth table

INPUT	OUTPUT		
	MR TC	BRAKE A = "1", the state of TS2 SW	BRAKE B = "1", the state of TS1 SW
1 ↕	a (track servo OFF)	b (track servo OFF)	
0 ↕	b (track servo ON)	a (track servo ON)	

When JF, JR or TS OFF command is effective, jump brake does not operate.

■ 6249826 0021754 T63 ■

OPTICAL PICKUP SERVO CONTROL

TRACK function table

Command	INPUT		OUTPUT (SW position)			
	D3	D2	TS1 SW	TS2 SW	JF SW	JR SW
TS OFF	0	0	a(servo ON)	a(servo OFF)	b	b
TS ON	0	1	a(servo ON)	b(servo ON)	b	b
JF	1	0	b(servo OFF)	b(servo ON)	a(JF ON)	b
JR	1	1	b(servo OFF)	b(servo ON)	b	a(JR ON)

SLIDE function table

Command	INPUT		OUTPUT (SW position)			
	D1	D0	SS SW	SF SW	SR SW	
SS OFF	0	0	a(servo OFF)	b	b	
SS ON	0	1	b(servo ON)	b	b	
SF	1	0	a(servo OFF)	a(SF ON)	b	
SR	1	1	a(servo OFF)	b	a(SR ON)	

Direct command function

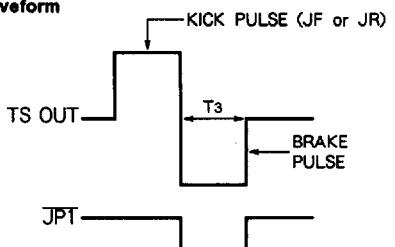

JP1 signal

During jump of a track and the like operation, two serial data transfers can be omitted so as to decrease delay in microcomputer processing time.

JP1 is normally "1". Switching to JP1 = "0" when TC (Data OUT) signal = "↑" causes the logic controller to automatically inverse the Jump polarity (JF → JR and JR → JF).

If JP1 is changed from "0" to "1" upon completion of one-track jump (after given time T3), JF and JR are automatically ended, thus turning TS and SS on.

Jump T. ACT waveform

JP1 signal truth table

JP1 (INPUT)	TRACK2 Mode (0010-D3 D2 D1 D0) (OUTPUT)							
	TRACK (D3 D2)				SLIDE (D1 D0)			
	00	01	10	11	00	01	10	11
1	TS OFF	TS ON	JF	JR	SS OFF	SS ON	SF	SR
0	TS OFF	TS ON	JR	JF	SS OFF	SS ON	SF	SR
↑	TS OFF	TS ON	TS ON	TS ON	SS ON	SS ON	SF	SR

Note 6. If JP1 = "↑" command is input when TS is OFF (001000XX), TS and SS are not turned on.

7. If TS and SS are turned on when JP1 = "↑", TS and SS are kept ON until the subsequent TRACK2 mode command arrives.

T-HLD

Is the direct control terminal of TS1 SW

T-HLD	Function (OUTPUT)
1	TS1 SW = OPEN
0	Logic control command prevails

When BRAKE TS is off, however, the logic command prevails for TS1 SW.

OPTICAL PICKUP SERVO CONTROL

Logic output function**Data out**

This is switched by changing the serial command mode (see the Serial Command Function Table).

Data output corresponds to the serial command mode sent last.

(II) TC

Outputs TC signals latching MR signals at the edge (rise or fall) of TC Det output TC.

TC = "0" during reset.

(III) SHOCK OUT

Outputs SHOCK Det signals (SHOCK OUT).

Data out output correspondence table

	Data OUT signal name	Serial command mode (INPUT)
(I)	FS ON	FOCUS (0000XXXX)
(II)	TC	TRACK2 (0010XXXX)
(III)	SHOCK	TRACK1 A (0001XXXX) TRACK1 B (0011XXXX)

TC truth table

INPUT		OUTPUT
MR	TC	TC
1	↑ or ↓	1
0	↑ or ↓	0

HFD

With MR signals (MR = "0" when HF signals are normal) of the pre-amplifiers (M51563P, M51567P, M51599FP) input to MR, this outputs HFD = "1":

- During track jump
- During HF signal missing part detection
(MR signal : MR = "1").

Jump flag

Outputs "1" when the serial command is TS OFF, JF, JR, and BRAKE, and "0" in other conditions.

FS OK truth table

INPUT	OUTPUT
HF OK FS SW position	FS OK
0 b(servo OFF)	0
1 b(servo OFF)	0
0 a(servo ON)	0
1 a(servo ON)	1

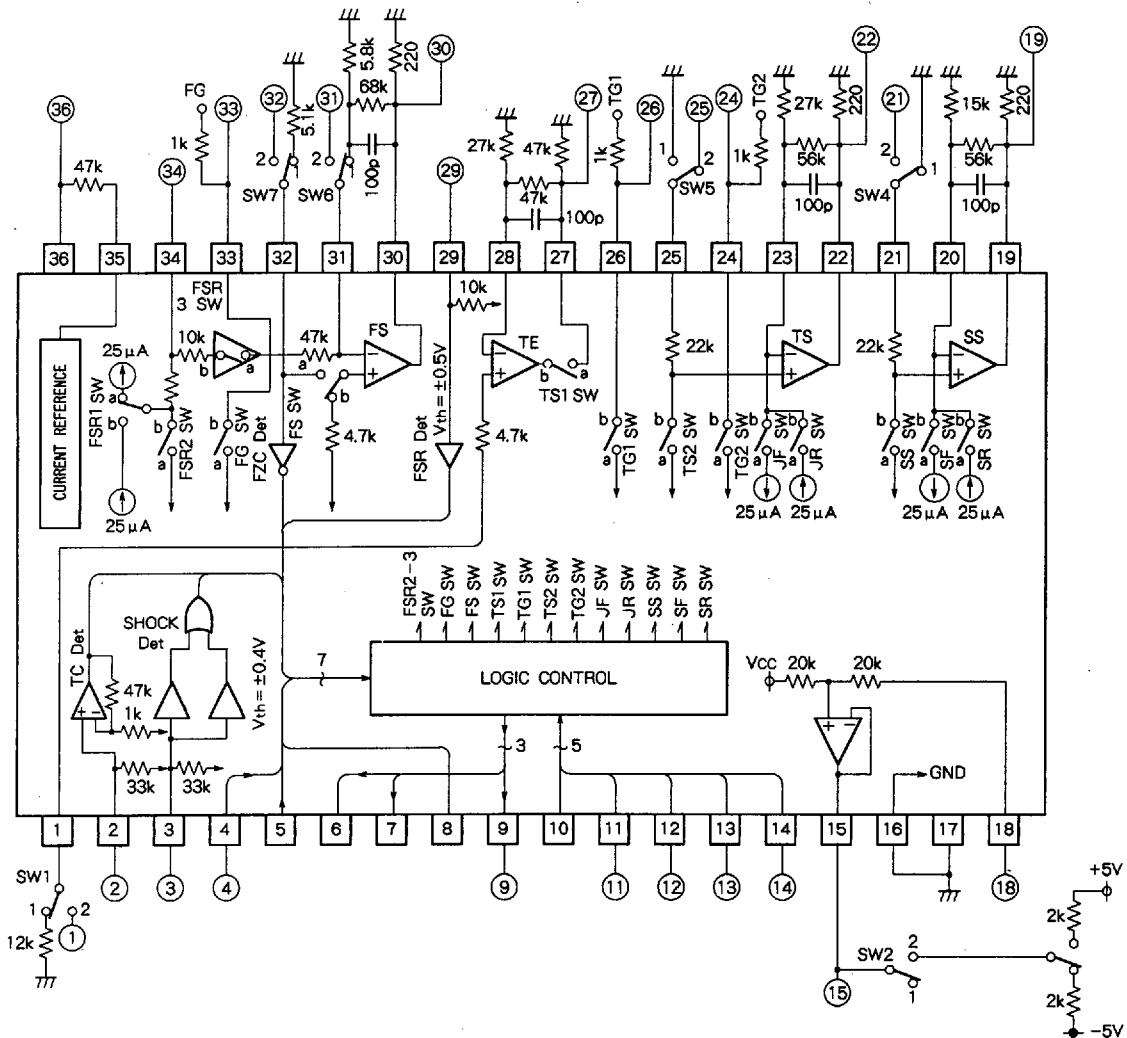

While FS OK = "0", the following hold regardless of the command state:

TS2 SW = "a" (servo OFF)

SS SW = "a" (servo OFF)
