

BI-DIRECTIONAL MOTOR DRIVER**DESCRIPTION**

The M54542L, BI-DIRECTIONAL MOTOR DRIVER, consists of a full bridge power driver designed for D-C motor control.

FEATURES

- 9-pin single-in-line power tab package
- Integral diodes for transient suppression
- 1.2A output current
- PMOS compatible input

APPLICATIONS

- Audio, video cassette recorders
- Floppy disk driver

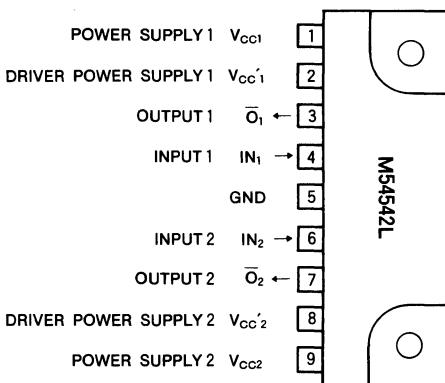

FUNCTION

The M54542L, full bridge motor driver, has the logic circuitry and darlington-pair power drivers for bidirectional control of D-C motors operating at currents up to 1.2A.

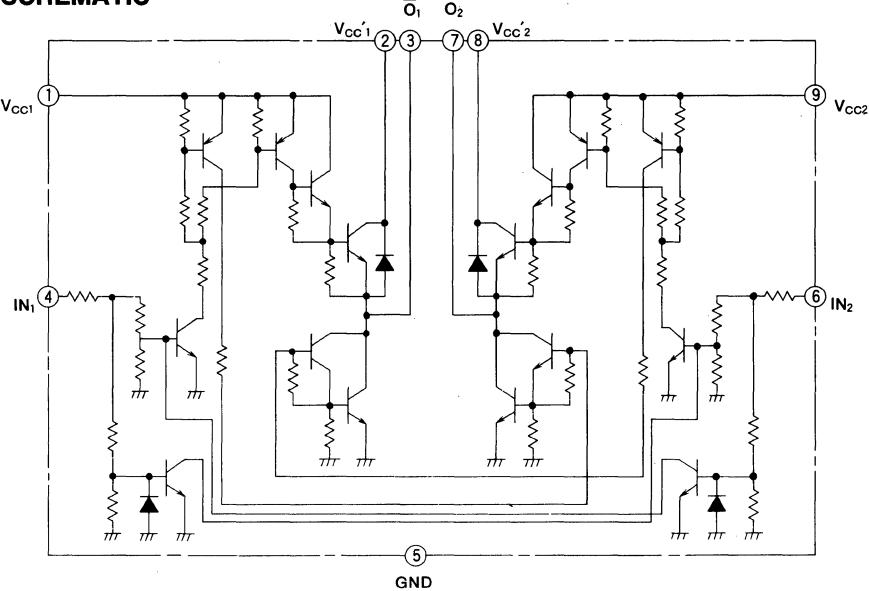

The power supplies for the logic circuitry and the drivers are separated so that the applied voltage to the motor can be controlled by the V_{CC}' of the driver power supply voltage.

Note

1. It is prohibited to switch the both inputs simultaneously. The inputs should be driven separately to avoid high crossover current.
2. The pins 1, 9 and 2, 8 are separated and shall be connected externally.
