

DUAL 4-INPUT POSITIVE NAND GATE WITH OPEN COLLECTOR OUTPUT**DESCRIPTION**

The M74LS22P is a semiconductor integrated circuit containing two 4-input positive-logic NAND gates with open collector outputs, usable as negative-logic NOR gates.

FEATURES

- Usable in wire-AND connection
- High breakdown input voltage ($V_I \geq 15V$)
- High breakdown output voltage ($V_O \geq 7V$)
- Low power dissipation ($P_D = 4mW$ typical)
- High speed ($t_{PD} = 18ns$ typical)
- Wide operating temperature range ($T_a = -20 \sim +75^{\circ}C$)

APPLICATION

General purpose, for use in industrial and consumer equipment.

FUNCTIONAL DESCRIPTION

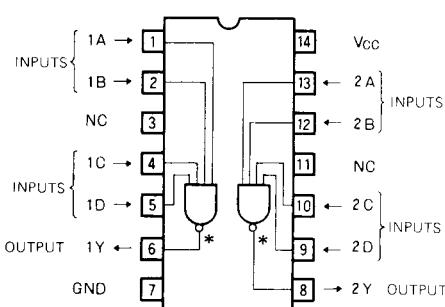

With the use of open collector outputs and SBD inputs featuring a high breakdown voltage, the high-level output impedance can be selected freely by use of an external load resistor. This permits wire-AND connection which has been impossible with conventional gates.

When inputs A, B, C and D are high, output Y is low and when one or more of the inputs is low, output Y is high.
