

MITSUBISHI LSTTLs M74LS253P

DUAL 4-LINE TO 1-LINE DATA SELECTOR/MULTIPLEXER WITH 3-STATE OUTPUT

DESCRIPTION

The M74LS253P is a semiconductor integrated circuit containing two 4-line to 1-line data selector/multiplexer circuits and 3-state outputs.

FEATURES

- Selection inputs common to both circuits
- Output control inputs separate for each circuit
- 3-state outputs
- Wide operating temperature range ($T_a = -20 \sim +75^\circ\text{C}$)

APPLICATION

General purpose, for use in industrial and consumer equipment.

FUNCTIONAL DESCRIPTION

This IC has two data selector circuits which provide 1-line selection of 4 input signal using two multiplexer circuits which convert the 4-bit parallel data into serial data by time-sharing. When 4-line signals are applied to the data inputs D_0, D_1, D_2 and D_3 , and 1 data is specified from among the data input by selection inputs S_A and S_B , the input signal is output at Y. By applying 4-bit parallel data to data inputs D_0, D_1, D_2 and D_3 and by connecting the output of a synchronous divide-by-four counter to S_A and S_B , data D_0, D_1, D_2 and D_3 appear in the order of D_0, D_1, D_2 and D_3 , synchronized with the clock pulse. S_A and S_B are common to both circuits while output control inputs $1\overline{OC}$ and $2\overline{OC}$ are separate. When $1\overline{OC}$ and $2\overline{OC}$ are set high, $1Y$ and $2Y$ are put in the high-impedance state ("Z") irrespective of the status of the inputs.

M74LS253P has the same functions and pin connections as M74LS153P but the latter is provided with active pull-up resistor outputs.
