

MAS9270

IC FOR 10.00 – 30.00 MHz VCTCXO

- Wide Supply Voltage Range
- True Sine Wave Output
- Very High Level of Integration
- Electrically Trimmable
- Very Low Phase Noise
- Low Cost
- Minimum Operating Temperature $-40\text{ }^{\circ}\text{C}$

DESCRIPTION

The MAS9270 is an integrated circuit well suited to build VCTCXO for mobile communication. Temperature calibration is achieved in three calibration temperatures only. The trimming is done through a serial bus and the calibration information is stored in an internal PROM. This means no rework for trimming is needed.

To build a VCTCXO additionally only crystal is required. The compensation method is fully analog, working continuously without generating any steps or other interference.

FEATURES

- Very small size
- Minor current draw
- Wide operating temperature range
- Phase noise $<-120\text{ dBc/Hz}$ at 100Hz offset
- Programmable VC-sensitivity
- Minimum Operating Temperature $-40\text{ }^{\circ}\text{C}$ for MAS9270Cxx3

APPLICATIONS

- VCTCXO for mobile phones
- VCTCXO for other telecommunications systems

Note: Because the substrate of the die is internally connected to GND, the die has to be connected to GND or left floating. Make sure that GND is the first pad to be bonded. Pick-and-place and all component assembly are recommended to be performed in ESD protected area.

Note: Pad coordinates are measured from the left bottom corner of the chip to the center of the pads. The coordinates may vary depending on sawing width and location, however, distances between pads are accurate.
