### Description

M/A-COM's MASWSS0029 is a GaAs PHEMT MMIC single pole double throw (SPDT) high power switch in a low cost SOT-26 package. The MASWSS0029 is ideally suited for applications where high power, low control voltage, low insertion loss, high isolation, small size and low cost are required.

Typical applications are for CDMA handset systems that connect separate transceiver and/or GPS functions to a common antenna, as well as other related handset and general purpose applications. This part can be used in all systems operating up to 3.0 GHz requiring high power at low control voltage.

The MASWSS0029 is fabricated using a 0.5 micron gate length GaAs PHEMT process. The process features full passivation for performance and reliability.

## **Handling Procedures**

Please observe the following precautions to avoid damage:

## Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
