RMS Power Detector

MAX2203

General Description

The MAX2203 RMS power detector is designed to operate from 800MHz to 2.0GHz. The device is ideal for wideband code-division multiple access (WCDMA), cdma2000®, and high-speed downlink/uplink packet access. The MAX2203 accepts an RF signal at the input and outputs the same voltage regardless of the peak-average of the input signal. The output voltage and input power is linear in dB. The device has a -24dBm to +3dBm detection range, and every dB change in input power gives 35mV (typ) change in output voltage.

The MAX2203 operates from a 2.5V to 4.2V supply and is specified over the -40°C to +85°C extended temperature range. The device is available in a 6-bump WLP package.

Applications

WCDMA, cdma2000, 1xEVDO
High-Speed Downlink Packet Access (HSDPA)
High-Speed Uplink Packet Access (HSUPA)

Typical Operating Circuit appears at end of data sheet.

Features

- ◆ -24dBm to +3dBm Power-Detection Range
- ◆ 35mV/dB (typ) Log Detector
- ◆ 0.1dB (typ) RMS Accuracy from WCDMA Modulation Change
- ◆ ±0.4dB Detection Error Due to Temperature
- ◆ +2.5V to +4.2V Single-Supply Operation
- ◆ Space-Saving 6-Bump WLP Package

Ordering Information

PART	TEMP RANGE	PIN-PACKAGE	TOP MARK
MAX2203EWT+T10	-40°C to +85°C	6 WLP	AA

+Denotes a lead(Pb)-free/RoHS-compliant package.
T = Tape and reel.

Pin Configuration

RMS Power Detector

ABSOLUTE MAXIMUM RATINGS

V _{CC} to GND	-0.3V to +4.5V
ENA, OUT, FILT to GND	-0.3V to +3.0V
RFIN Input Power	+10dBm
Continuous Power Dissipation (T _A = +70°C) 6-Bump WLP (derate 2.9mW/°C above +70°C).....	232mW

Junction-to-Ambient Thermal Resistance (θ _{JA}) (Note 1)	347°C/W
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-65°C to +160°C
Junction Temperature	+150°C
Lead Temperature (soldering, 10s).....	Reflow Profile (Note 2)

Note 1: Package thermal resistances were obtained using the method described in JEDEC specifications. For detailed information on package thermal considerations, refer to www.maxim-ic.com/thermal-tutorial.

Note 2: Refer to Application Note 1891: *Wafer-Level Packaging (WLP) and Its Applications*.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

CAUTION! ESD SENSITIVE DEVICE

DC ELECTRICAL CHARACTERISTICS

(V_{CC} = 2.5V to 4.2V, T_A = -40°C to +85°C, V_{ENA} = 2.7V, no RF signal applied. Typical values are at V_{CC} = 2.8V, T_A = +25°C, unless otherwise noted.) (Note 3)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
Supply Voltage	V _{CC}		2.5	2.8	4.2	V
Supply Current	I _{CC}	V _{CC} = 2.8V, RF input = -24dBm to +3dBm		5	8	mA
Shutdown Supply Current		V _{ENA} = 0V		0.5	10	μA
ENA Logic-High Threshold	V _{IH}		1.1		2.7	V
ENA Logic-Low Threshold	V _{IL}		0		0.6	V
ENA Input Current		V _{ENA} = 1.1V		25		μA

AC ELECTRICAL CHARACTERISTICS

(V_{CC} = 2.8V, T_A = -40°C to +85°C, V_{ENA} = 2.7V, f_{RF} = 800MHz to 2GHz, unless otherwise noted. Typical values are at T_A = +25°C.) (Note 3)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
RF Input Frequency			800		2000	MHz
Maximum Output Voltage		RFIN at +3dBm	1.05	1.5	1.75	V
Minimum Output Voltage		No RF input power		300	400	mV
Minimum Input Power Level		+1dB input power step results in at least 25mV increase in V _{OUT} (Note 4)	-24			dBm
Log Slope		[(V _{OUT} at +3dBm) - (V _{OUT} at -24dBm)]/27	25	35	45	mV/dB
Log Conformance Error with 10dB Step		(Notes 4, 5)	-1.3		+1.3	dB
Power-Detector Accuracy Due to Temperature		RF input at -4dBm to 0dBm, T _A = -40°C to +85°C, relative to +25°C		±0.4		dB

Note 3: Guaranteed by production test at T_A = +85°C and 800MHz. Guaranteed by design and characterization at T_A = -40°C and T_A = +25°C, and over frequency limits.

Note 4: Guaranteed by design and characterization.

Note 5: Input power -24dBm to +3dBm. Ideal straight line calibrated with input power -20dBm and 0dBm at T_A = +25°C.

($V_{CC} = 2.7V$, $T_A = +25^{\circ}C$, WCDMA uplink DPCCH + 1DPDCH, log conformance calculation is referenced to a straight line that is calibrated at -20dBm and 0dBm, unless otherwise noted.)

RMS Power Detector

Pin Description

BUMP	NAME	FUNCTION
A1	RFIN/ENA	RF Input and Enable Logic Input. See the <i>Typical Operating Circuit</i> . Drive ENA high to turn on the device. Drive ENA low to place it in shutdown mode.
A2, B1	GND	Ground. Connect to PCB ground plane.
B2	FILT	Intermediate Filtering Node. Bypass FILT with a capacitor as close as possible to the device.
C1	VCC	Power Supply. Connect to either a regulated supply or battery. Bypass VCC with a capacitor as close as possible to the device.
C2	OUT	Detector Output. Connect an external lowpass RC filter for filtering.

MAX2203

Detailed Description

The MAX2203 RMS power detector is designed to operate from 800MHz to 2.0GHz. The device is ideal for WCDMA, cdma2000, and high-speed downlink/uplink packet access. The MAX2203 accepts an RF signal at the input and outputs the same voltage regardless of

the peak-average of the input signal. The output voltage and input power is linear in dB. The device has a -24dBm to +3dBm detection range, and every dB change in input power gives 35mV (typ) change in output voltage. Table 1 shows the peak to average of the signals used to test the MAX2203.

Table 1. Peak-to-Average Ratio (PAR*) of Test Signals

MODULATION	PAR AT DIFFERENT PROBABILITY OF COMPLEMENTARY CUMULATIVE DISTRIBUTION (dB)			
	10%	1%	0.1%	0.01%
DPCCH + 1DPDCH	4.8	5.8	6.2	6.5
DPCCH + 5DPDCH	6.5	8.4	9.2	9.8
IS95 Reverse	5.5	6.9	7.6	8.1
IS95 Forward Pilot	5.6	7.6	8.8	9.5
9-Channel Forward	7	10.3	12	12.7
cdma2000 Pilot + DCCH	6.8	8.3	9.2	9.7

*PAR of CW is 3dB.

RMS Power Detector

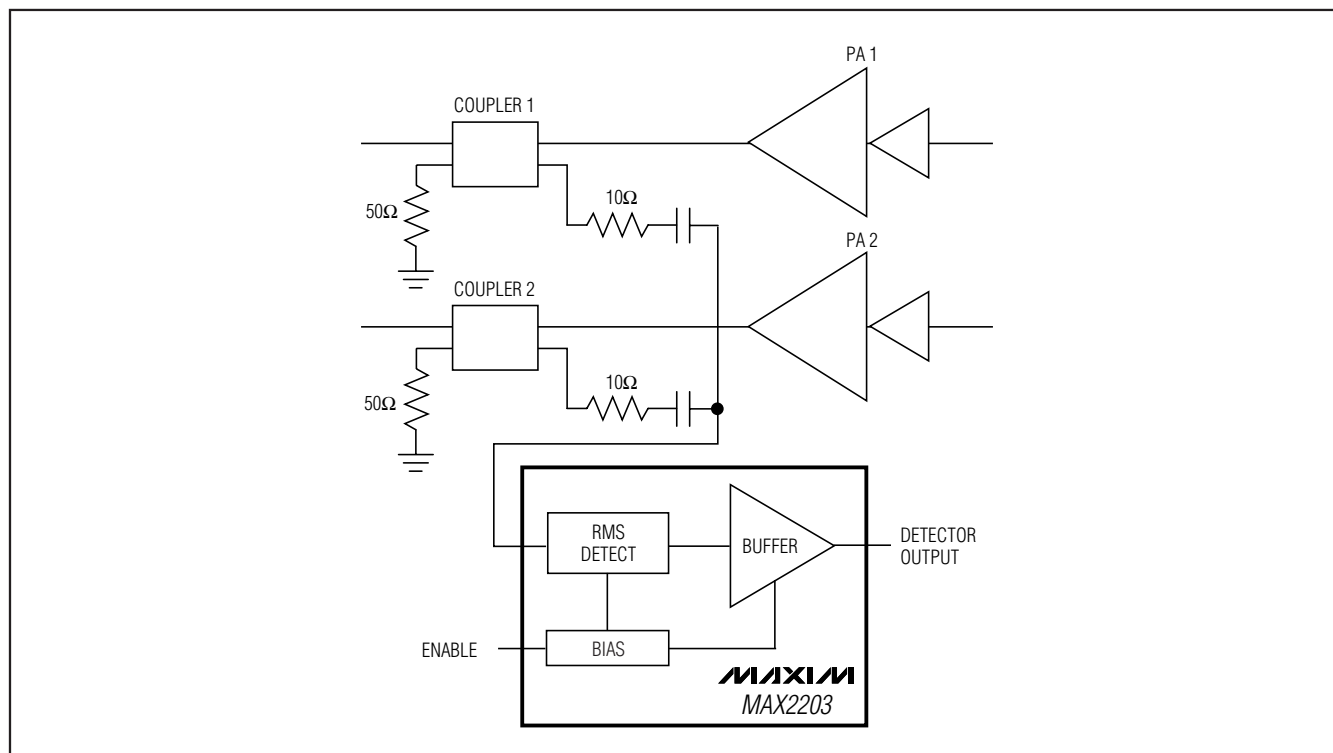

Figure 1. System Level Connection

Applications Information

The MAX2203 uses external termination when using directional couplers. Figure 1 shows the system level connection of dual-band power detection. The output of the detector is typically connected to an ADC in cdma2000 or WCDMA power-control topology.

Enable Logic Level

The MAX2203 features an enable input (ENA) that allows the device to be put into shutdown. For normal operation, drive ENA high. For device shutdown, drive ENA low. The ENA pin is DC biased through a resistor. The value of the resistor is recommended to be greater than $1\text{k}\Omega$ to avoid loading the RF input signal. There is an internal resistor to GND of approximately $50\text{k}\Omega$. If the control source high voltage is greater than 2.8V, calculate and use a resistor value that ensures the ENA pin only sees a maximum of 2.7V, which is within specification. In this manner, the MAX2203 can be driven from a control device with a logic-high greater than 2.8V.

Layout

The MAX2203 is not particularly sensitive to the layout since it only needs 3dBm for maximum output voltage. However, there are two areas that need attention: the GND pins and the supply bypassing. Connect the GND pins to the PCB ground with a ground via as close as possible, and bypass V_{CC} to ground with a capacitor as close as possible to the part.
