14 W BTL AUDIO POWER AMPLIFIER

The Fujitsu MB3730A is designed for a low-frequency high-power amplifier with internal BTL (Balanced Transformer Less) circuitry. The MB3730A is packed in 7 pin single in line plastic package and requires a few external components, this enables high density mounting. Design for heat radiation is easy because thermal resistance is low 3°C/W.

The MB3730A contains internal power-on pop noise protection circuit and various protection circuits. The device is suitable best for car-stereo.

- High power output : 14W typ.
- Minimum external components
- Various protection circuits
 - Over voltage protection
 - Load short protection
 - Thermal protection
 - Output pin-to-DC short protection
- No break-down: between pins is shorted or inverted insertion
- Low thermal resistance : 3°C/W
- On-chip power-on pop noise protection circuit
- 7-pin Plastic Single In Line package (Suffix: -PS)

(FRONT VIEW)

This device contains circuitry to protect the inputs against damage due to high static voltages or electric fields. However, it is advised that normal precautions be taken to avoid application of any voltage higher than maximum rated voltages to this high impedance circuit.

ABSOLUTE MAXIMUM RATINGS (see NOTE) (T_C=25°C)

Rating	Symbol	Value	Unit
Power Supply Voltage	V _{CC}	18	V
Power Supply Voltage (Surge)	V _{CCS}	50 *	V
Output Current (Peak)	I _{OPEAK}	4.5	A
Power Dissipation	P _D	18	W
Operating Temperature (Case)	T _C	-20 to +75	°C
Storage Temperature	T _{STG}	-55 to +150	°C

Note: * t_s ≤ 0.2 sec, t_r ≥ 1 msec

Permanent device damage may occur if the above Absolute Maximum Ratings are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

- Notes:
- *1 Effective to prevent from oscillation depending on printing pattern.
 - *2 When power supply line is stable, please connect with VCC side, it restrains the oscillation.
 - *3 Use Mylar Capacitor.
 - *4 The TAB should be connected with GND.
