

32-bit RISC Microcontroller

CMOS

FR30 Series

MB91101/MB91101A

■ DESCRIPTION

The MB91101 is a standard single-chip microcontroller constructed around the 32-bit RISC CPU (FR* family) core with abundant I/O resources and bus control functions optimized for high-performance/high-speed CPU processing for embedded controller applications. To support the vast memory space accessed by the 32-bit CPU, the MB91101 normally operates in the external bus access mode and executes instructions on the internal 1 Kbyte cache memory and 2 Kbytes RAM for enhanced performance.

The MB91101 is optimized for applications requiring high-performance CPU processing such as navigation systems, high-performance FAXs and printer controllers.

*: FR Family stands for FUJITSU RISC controller.

■ FEATURES

FR CPU

- 32-bit RISC, load/store architecture, 5-stage pipeline
- Operating clock frequency: Internal 50 MHz/external 25 MHz (PLL used at source oscillation 12.5 MHz)
- General purpose registers: 32 bits × 16
- 16-bit fixed length instructions (basic instructions), 1 instruction/1 cycle
- Memory to memory transfer, bit processing, barrel shifter processing: Optimized for embedded applications
- Function entrance/exit instructions, multiple load/store instructions of register contents, instruction systems supporting high level languages
- Register interlock functions, efficient assembly language coding
- Branch instructions with delay slots: Reduced overhead time in branch executions

■ PACKAGE

100-pin Plastic LQFP

(FPT-100P-M05)

100-pin Plastic QFP

(FPT-100P-M06)

www.DataSheet4U.com

MB91101/MB91101A

(Continued)

- Internal multiplier/supported at instruction level
 - Signed 32-bit multiplication: 5 cycles
 - Signed 16-bit multiplication: 3 cycles
- Interrupt (push PC and PS): 6 cycles, 16 priority levels

External bus interface

- Clock doubler: Internal 50 MHz, external bus 25 MHz operation
- 25-bit address bus (32 Mbytes memory space)
- 8/16-bit data bus
- Basic external bus cycle: 2 clock cycles
- Chip select outputs for setting down to a minimum memory block size of 64 Kbytes: 6
- Interface supported for various memory technologies
 - DRAM interface (area 4 and 5)
- Automatic wait cycle insertion: Flexible setting, from 0 to 7 for each area
- Unused data/address pins can be configured as input/output ports
- Little endian mode supported (Select 1 area from area 1 to 5)

DRAM interface

- 2 banks independent control (area 4 and 5)
- Normal mode (double CAS DRAM)/high-speed page mode (single CAS DRAM)/Hyper DRAM
- Basic bus cycle: Normally 5 cycles, 2-cycle access possible in high-speed page mode
- Programmable waveform: Automatic 1-cycle wait insertion to RAS and CAS cycles
- DRAM refresh
 - CBR refresh (interval time configurable by 6-bit timer)
 - Self-refresh mode
- Supports 8/9/10/12-bit column address width
- 2CAS/1WE, 2WE/1CAS selective

Cache memory

- 1-Kbyte instruction cache memory
- 32 block/way, 4 entry(4 word)/block
- 2 way set associative
- Lock function: For specific program code to be resident in cache memory

DMA controller (DMAC)

- 8 channels
- Transfer incident/external pins/internal resource interrupt requests
- Transfer sequence: Step transfer/block transfer/burst transfer/continuous transfer
- Transfer data length: 8 bits/16 bits/32 bits selective
- NMI/interrupt request enables temporary stop operation

UART

- 3 independent channels
- Full-duplex double buffer
- Data length: 7 bits to 9 bits (non-parity), 6 bits to 8 bits (parity)
- Asynchronous (start-stop system), CLK-synchronized communication selective
- Multi-processor mode
- Internal 16-bit timer (U-TIMER) operating as a proprietary baud rate generator: Generates any given baud rate
- Use external clock can be used as a transfer clock
- Error detection: Parity, frame, overrun

(Continued)

10-bit A/D converter (successive approximation conversion type)

- 10-bit resolution, 4 channels
- Successive approximation type: Conversion time of 5.6 μ s at 25 MHz
- Internal sample and hold circuit
- Conversion mode: Single conversion/scanning conversion/repeated conversion/stop conversion selective
- Start: Software/external trigger/internal timer selective

16-bit reload timer

- 3 channels
- Internal clock: 2 clock cycle resolution, divide by 2/8/32 selective

Other interval timers

- 16-bit timer: 3 channels (U-TIMER)
- PWM timer: 4 channels
- Watchdog timer: 1 channel

Bit search module

First bit transition "1" or "0" from MSB can be detected in 1 cycle

Interrupt controller

- External interrupt input: Non-maskable interrupt ($\overline{\text{NMI}}$), normal interrupt \times 4 (INT0 to INT3)
- Internal interrupt incident: UART, DMA controller (DMAC), A/D converter, U-TIMER and delayed interrupt module
- Priority levels of interrupts are programmable except for non-maskable interrupt (in 16 steps)

Others

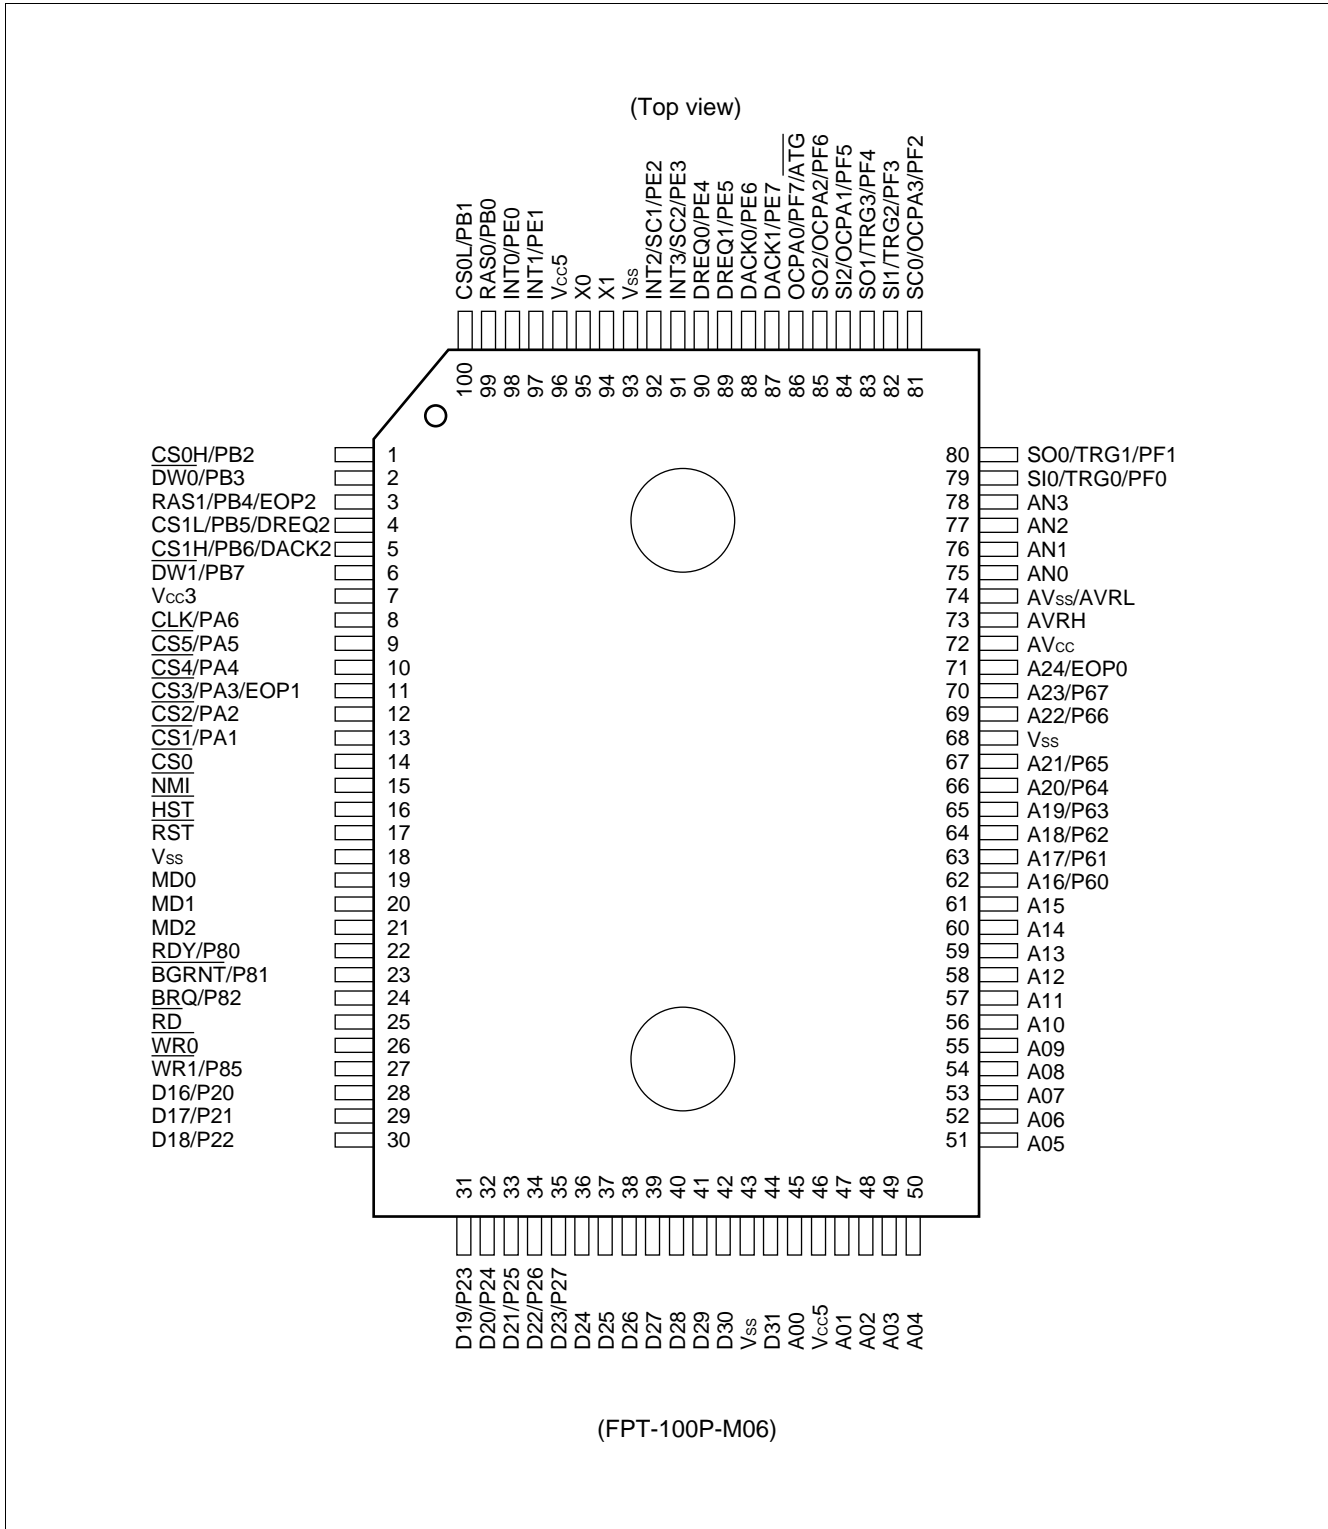

- Reset cause: Power-on reset/hardware standby/watchdog timer/software reset/external reset
- Low-power consumption mode: Sleep mode/stop mode
- Clock control
 - Gear function: Operating clocks for CPU and peripherals are independently selective
 - Gear clock can be selected from 1/1, 1/2, 1/4 and 1/8 (or 1/2, 1/4, 1/8 and 1/16)
 - However, operating frequency for peripherals is less than 25 MHz.
- Packages: LQFP-100 and QFP-100
- CMOS technology (0.35 μ m)
- Power supply voltage
 - 5 V: CPU power supply 5.0 V \pm 10% (internal regulator)
 - A/D power supply 2.7 V to 3.6 V
 - 3 V: CPU power supply 2.7 V to 3.6 V (without internal regulator)
 - A/D power supply 2.7 V to 3.6 V

MB91101/MB91101A

■ PIN ASSIGNMENT

MB91101/MB91101A

MB91101/MB91101A

■ PIN DESCRIPTION

Pin no.		Pin name	Circuit type	Function									
LQFP*1	QFP*2												
25 to 32	28 to 35	D16 to D23	C	Bit 16 to bit 23 of external data bus									
		P20 to P27		Can be configured as I/O ports when external data bus width is set to 8-bit.									
33 to 39, 41	36 to 42, 44	D24 to D30, D31	C	Bit 24 to bit 31 of external data bus									
42, 44 to 58	45, 47 to 61	A00, A01 to A15	F	Bit 00 to bit 15 of external address bus									
59 to 64, 66, 67	62 to 67, 69, 70	A16 to A21, A22, A23	F	Bit 16 to bit 23 of external address bus									
		P60 to P65, P66, P67		Can be configured as I/O ports when not used as address bus.									
68	71	A24	L	Bit 24 of external address bus									
		EOP0		Can be configured as DMAC EOP output (ch. 0) when DMAC EOP output is enabled.									
19	22	RDY	C	External ready input Inputs "0" when bus cycle is being executed and not completed.									
		P80		Can be configured as a port when RDY is not used.									
20	23	$\overline{\text{BGRNT}}$	F	External bus release acknowledge output Outputs "L" level when external bus is released.									
		P81		Can be configured as a port when $\overline{\text{BGRNT}}$ is not used.									
21	24	BRQ	C	External bus release request input Inputs "1" when release of external bus is required.									
		P82		Can be configured as a port when BRQ is not used.									
22	25	$\overline{\text{RD}}$	L	Read strobe output pin for external bus									
23	26	$\overline{\text{WR0}}$	L	Write strobe output pin for external bus Relation between control signals and effective byte locations is as follows:									
24	27	$\overline{\text{WR1}}$	F	<table border="1"> <thead> <tr> <th></th> <th>16-bit bus width</th> <th>8-bit bus width</th> </tr> </thead> <tbody> <tr> <td>D15 to D08</td> <td>$\overline{\text{WR0}}$</td> <td>$\overline{\text{WR0}}$</td> </tr> <tr> <td>D07 to D00</td> <td>$\overline{\text{WR1}}$</td> <td>(I/O port enabled)</td> </tr> </tbody> </table>		16-bit bus width	8-bit bus width	D15 to D08	$\overline{\text{WR0}}$	$\overline{\text{WR0}}$	D07 to D00	$\overline{\text{WR1}}$	(I/O port enabled)
					16-bit bus width	8-bit bus width							
D15 to D08	$\overline{\text{WR0}}$	$\overline{\text{WR0}}$											
D07 to D00	$\overline{\text{WR1}}$	(I/O port enabled)											
P85	Note: $\overline{\text{WR1}}$ is Hi-Z during resetting. Attach an external pull-up resistor when using at 16-bit bus width. Can be configured as a port when $\overline{\text{WR1}}$ is not used.

Pin no.		Pin name	Circuit type	Function
LQFP*1	QFP*2			
11	14	$\overline{CS0}$	L	Chip select 0 output ("L" active)
10	13	$\overline{CS1}$	F	Chip select 1 output ("L" active)
		PA1		Can be configured as a port when $\overline{CS1}$ is not used.
9	12	$\overline{CS2}$	F	Chip select 2 output ("L" active)
		PA2		Can be configured as a port when $\overline{CS2}$ is not used.
8	11	$\overline{CS3}$	F	Chip select 3 output ("L" active)
		PA3		Can be configured as a port when $\overline{CS3}$ and EOP1 are not used.
		EOP1		EOP output pin for DMAC (ch. 1) This function is available when EOP output for DMAC is enabled.
7	10	$\overline{CS4}$	F	Chip select 4 output ("L" active)
		PA4		Can be configured as a port when $\overline{CS4}$ is not used.
6	9	$\overline{CS5}$	F	Chip select 5 output ("L" active)
		PA5		Can be configured as a port when $\overline{CS5}$ is not used.
5	8	CLK	F	System clock output Outputs clock signal of external bus operating frequency.
		PA6		Can be configured as a port when CLK is not used.
96	99	RAS0	F	RAS output for DRAM bank 0 Refer to the DRAM interface for details.
		PB0		Can be configured as a port when RAS0 is not used.
97	100	CS0L	F	CASL output for DRAM bank 0 Refer to the DRAM interface for details.
		PB1		Can be configured as a port when CS0L is not used.
98	1	CS0H	F	CASH output for DRAM bank 0 Refer to the DRAM interface for details.
		PB2		Can be configured as a port when CS0H is not used.
99	2	$\overline{DW0}$	F	\overline{WE} output for DRAM bank 0 ("L" active) Refer to the DRAM interface for details.
		PB3		Can be configured as a port when $\overline{DW0}$ is not used.
100	3	RAS1	F	RAS output for DRAM bank 1 Refer to the DRAM interface for details.
		PB4		Can be configured as a port when RAS1 and EOP2 are not used.
		EOP2		DMAC EOP output (ch. 2) This function is available when DMAC EOP output is enabled.

MB91101/MB91101A

■ HANDLING DEVICES

1. Preventing Latchup

In CMOS ICs, applying voltage higher than V_{CC} or lower than V_{SS} to input/output pin or applying voltage over rating across V_{CC} and V_{SS} may cause latchup.

This phenomenon rapidly increases the power supply current, which may result in thermal breakdown of the device. Make sure to prevent the voltage from exceeding the maximum rating.

Take care that the analog power supply (AV_{CC} , AVR) and the analog input do not exceed the digital power supply (V_{CC}) when the analog power supply turned on or off.

2. Treatment of Unused Pins

Unused pins left open may cause malfunctions. Make sure to connect them to pull-up or pull-down resistors.

3. External Reset Input

It takes at least 5 machine cycle to input "L" level to the \overline{RST} pin and to ensure inner reset operation properly.

4. Remarks for External Clock Operation

When external clock is selected, supply it to X0 pin generally, and simultaneously the opposite phase clock to X0 must be supplied to X1 pin. However, in this case the stop mode must not be used (because X1 pin stops at "H" output in stop mode).

And can be used to supply only to X0 pin with 5 V power supply at 12.5 MHz and less than.

• Using an external clock

Using an external clock (normal)
Note: Can not be used stop mode (oscillation stop mode).

Using an external clock (can be used at 12.5 MHz and less than.)
(5 V power supply only)

5. Power Supply Pins

When there are several V_{CC} and V_{SS} pins, each of them is equipotentially connected to its counterpart inside of the device, minimizing the risk of malfunctions such as latch up. To further reduce the risk of malfunctions, to prevent EMI radiation, to prevent strobe signal malfunction resulting from creeping-up of ground level and to observe the total output current standard, connect all V_{CC} and V_{SS} pins to the power supply or GND.

It is preferred to connect V_{CC} and V_{SS} of MB91101 to power supply with minimal impedance possible.

It is also recommended to connect a ceramic capacitor as a bypass capacitor of about $0.1 \mu\text{F}$ between V_{CC} and V_{SS} at a position as close as possible to MB91101.

MB91101 has an internal regulator. When using with 5 V power supply, supply 5 V to V_{CC5} pin and make sure to connect about $0.1 \mu\text{F}$ bypass capacitor to V_{CC3} pin for regulator. And another 3 V power supply is needed for the A/D converter. When using with 3 V power supply, connect both V_{CC5} pin and V_{CC3} pin to the 3 V power supply.

6. Crystal Oscillator Circuit

Noises around X0 and X1 pins may cause malfunctions of MB91101. In designing the PC board, layout X0, X1 and crystal oscillator (or ceramic oscillator) and bypass capacitor for grounding as close as possible.

It is strongly recommended to design PC board so that X1 and X0 pins are surrounded by grounding area for stable operation.

7. Turning-on Sequence of A/D Converter Power Supply and Analog Input

Make sure to turn on the digital power supply (V_{CC}) before turning on the A/D converter (AV_{CC} , AV_{RH}) and applying voltage to analog input (AN0 to AN3).

Make sure to turn off digital power supply after power supply to A/D converters and analog inputs have been switched off. (There are no such limitations in turning on power supplies. Analog and digital power supplies may be turned on simultaneously.) Make sure that AV_{RH} never exceeds AV_{CC} when turning on/off power supplies.

8. Treatment of N.C. Pins

Make sure to leave N.C. pins open.

MB91101/MB91101A

9. Fluctuation of Power Supply Voltage

Warranty range for normal operation against fluctuation of power supply voltage V_{CC} is as given in rating. However, sudden fluctuation of power supply voltage within the warranty range may cause malfunctions. It is recommended to make every effort to stabilize the power supply voltage to IC. It is also recommended that by controlling power supply as a reference of stabilizing, V_{CC} ripple fluctuation (P-P value) at the commercial frequency (50 Hz to 60 Hz) should be less than 10% of the standard V_{CC} value and the transient regulation should be less than 0.1 V/ms at instantaneous deviation like turning off the power supply.

10. Mode Setting Pins (MD0 to MD2)

Connect mode setting pins (MD0 to MD2) directly to V_{CC} or V_{SS} .

Arrange each mode setting pin and V_{CC} or V_{SS} patterns on the printed circuit board as close as possible and make the impedance between them minimal to prevent mistaken entrance to the test mode caused by noises.

11. Internal DC Regulator

Internal DC regulator stops in stop mode. When the regulator stops owing to the increase of inner leakage current (ICCH) in stop mode, malfunction caused by noise or any troubles about power supply in normal operation, the internal 3 V power supply voltage may decrease less than the warranty range for normal operation. So when using the internal regulator and stop mode with 5 V power supply, never fail to support externally so that 3 V power supply voltage might not decrease. However, even in such a case, the internal regulator can be restarted by inputting the reset procedure. (In this case, set the reset to "L" level within the oscillation stabilizing waiting time.)

• Using STOP mode with 5 V power supply

12. Turning on the Power Supply

When turning on the power supply, never fail to start from setting the \overline{RST} pin to "L" level. And after the power supply voltage goes to V_{CC} level, at least after ensuring the time for 5 machine cycle, then set to "H" level.

13. Pin Condition at Turning on the Power Supply

The pin condition at turning on the power supply is unstable. The circuit starts being initialized after turning on the power supply and then starting oscillation and then the operation of the internal regulator becomes stable. So it takes about 42 ms for the pin to be initialized from the oscillation starting at the source oscillation 12.5 MHz. Take care that the pin condition may be output condition at initial unstable condition.

(With the MB91101A, however, initialization can be achieved in less than about 42 ms after turning on the internal power supply by maintaining the \overline{RST} pin at "L" level.)

14. Source Oscillation Input at Turning on the Power Supply

At turning on the power supply, never fail to input the clock before cancellation of the oscillation stabilizing waiting.

15. Hardware Stand-by at Turning on the Power Supply

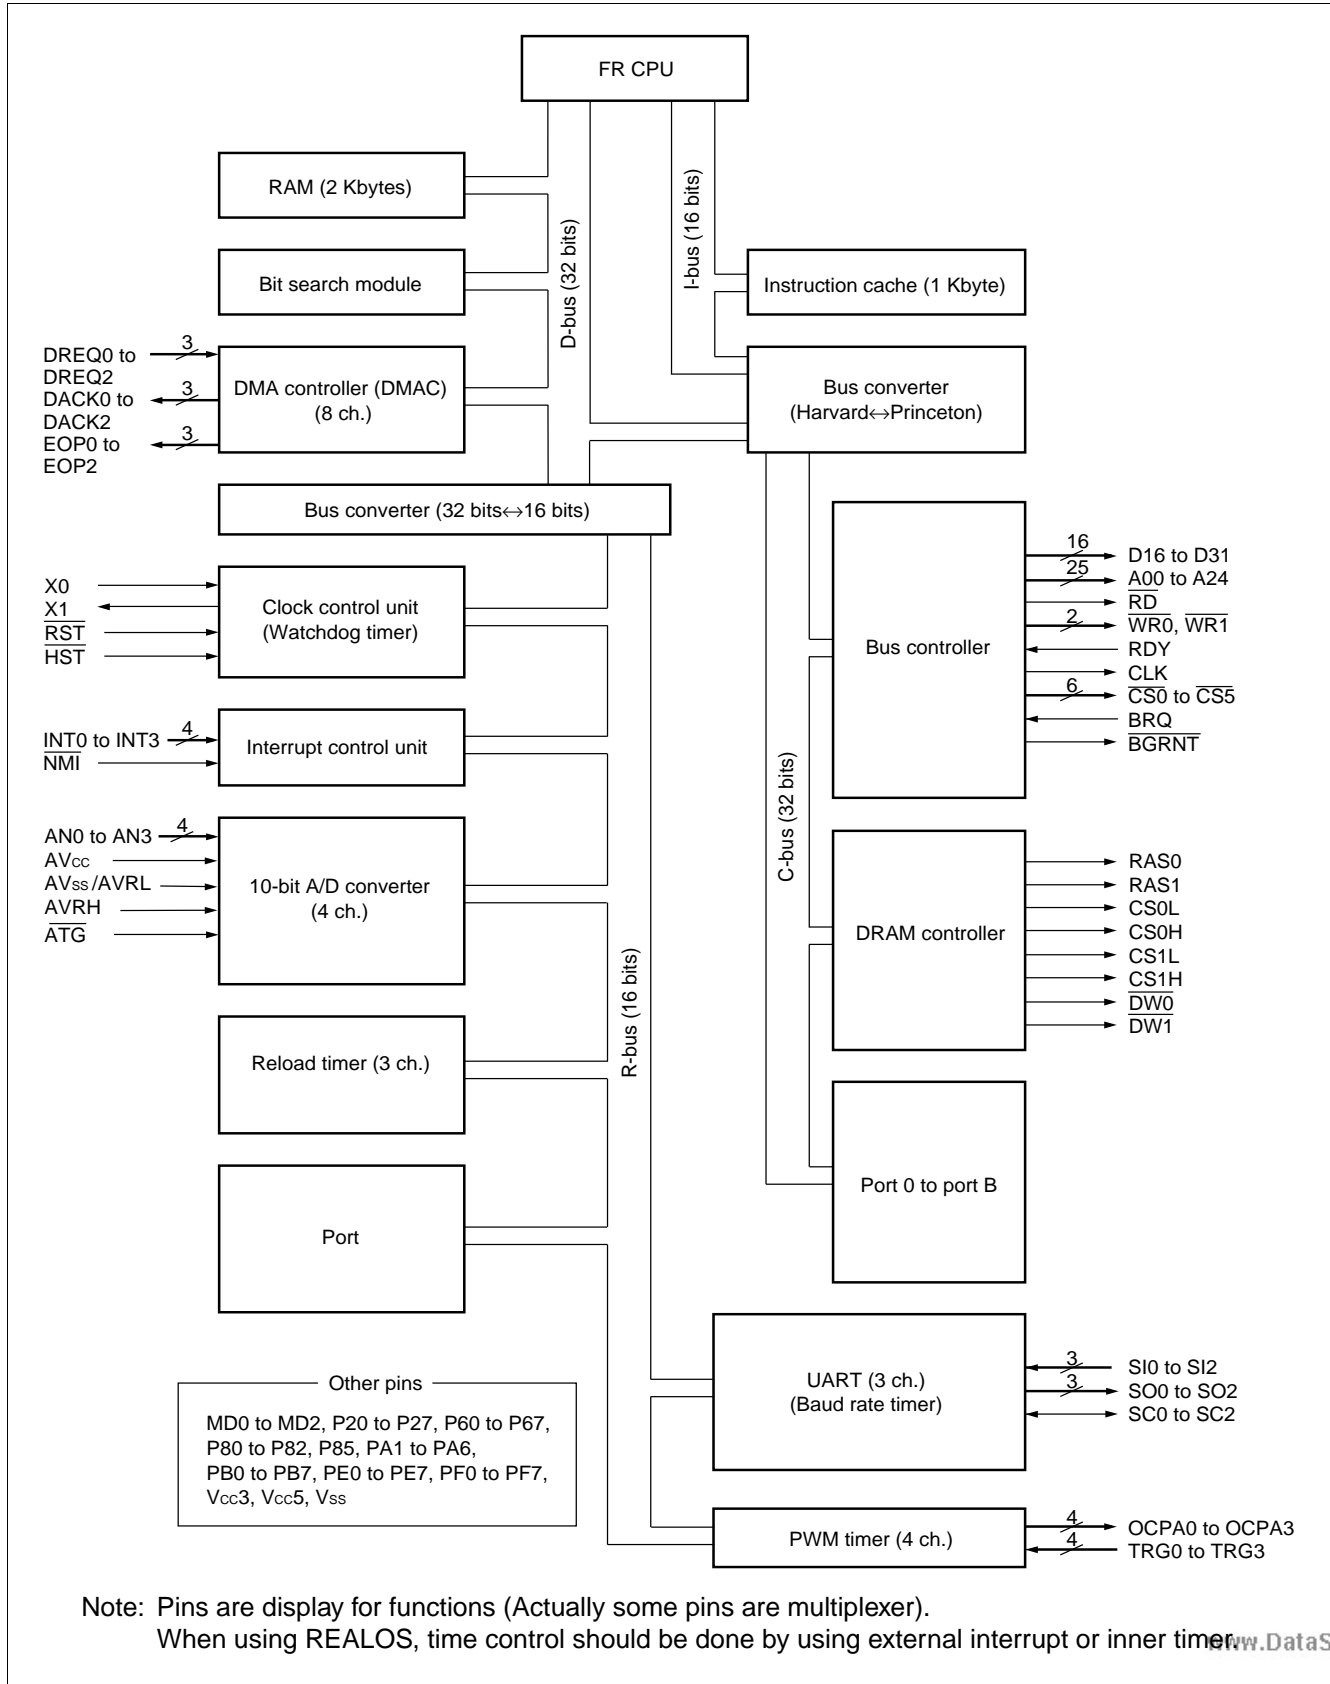

When turning on the power supply with the $\overline{\text{HST}}$ pin being set to “L” level, the hardware doesn't stand by. However the $\overline{\text{HST}}$ pin becomes available after the reset cancellation, the $\overline{\text{HST}}$ pin must once be back to “H” level.

16. Power on Reset

Make sure to make power on reset at turning on the power supply or returning on the power supply when the power supply voltage is below the warranty range for normal operation.

MB91101/MB91101A

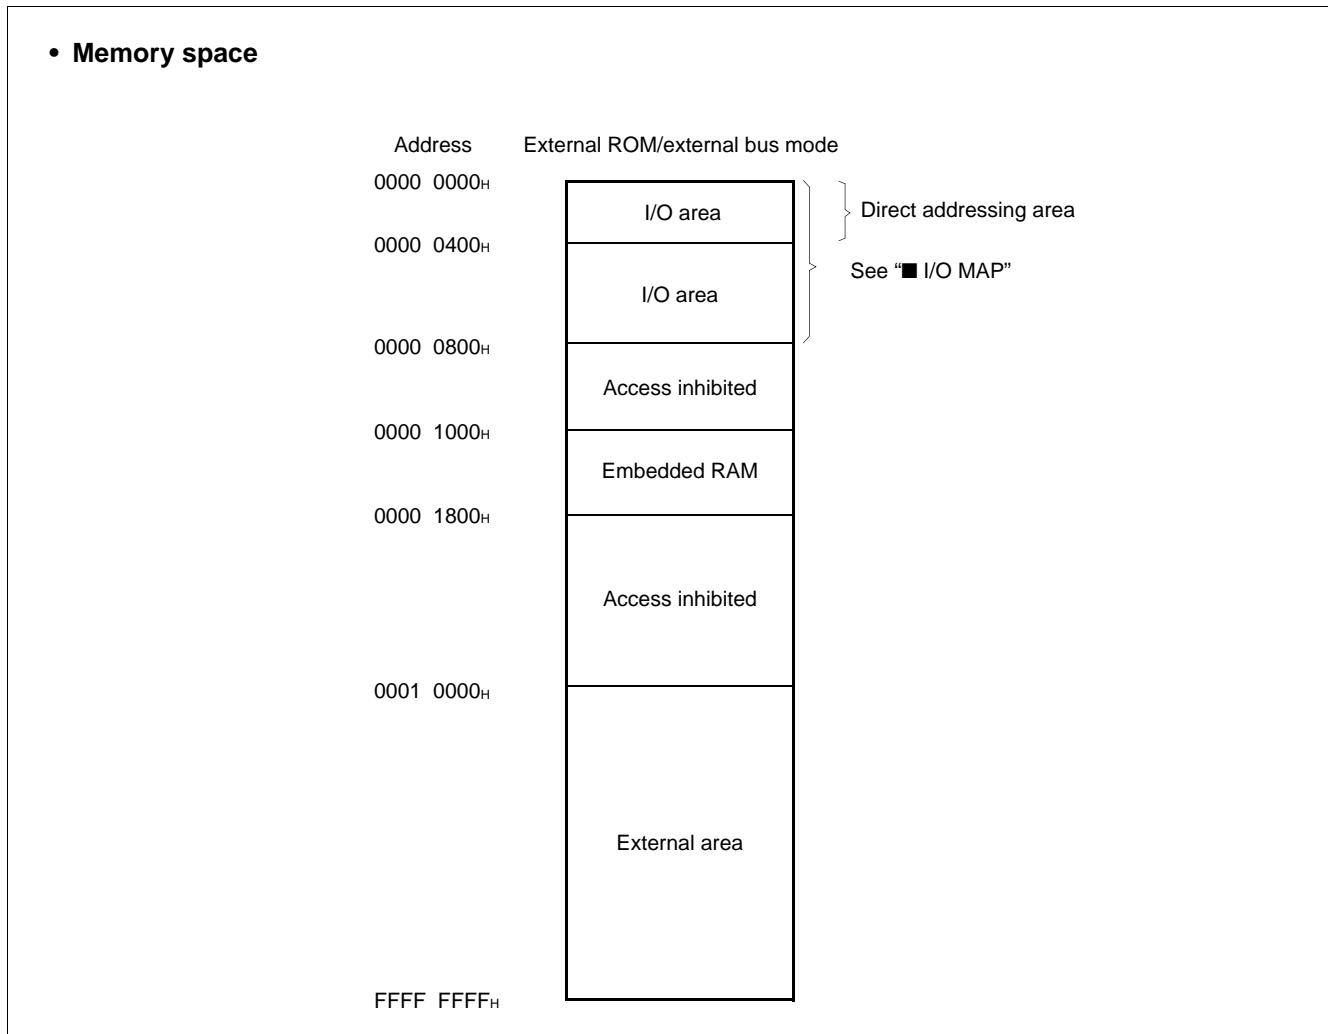

■ BLOCK DIAGRAM

■ CPU CORE

1. Memory Space

The FR family has a logical address space of 4 Gbytes (2^{32} bytes) and the CPU linearly accesses the memory space.

• Direct addressing area

The following areas on the memory space are assigned to direct addressing area for I/O. In these areas, an address can be specified in a direct operand of a code.

Direct areas consists of the following areas dependent on accessible data sizes.

Byte data access: 000_H to 0FF_H

Half word data access: 000_H to 1FF_H

Word data access: 000_H to 3FF_H

MB91101/MB91101A

2. Registers

The FR family has two types of registers; dedicated registers embedded on the CPU and general-purpose registers on memory.

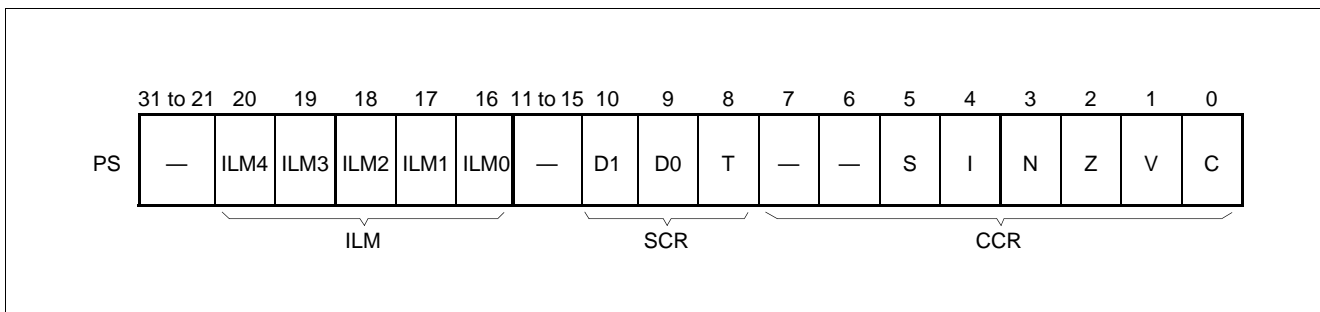

• Dedicated registers

- Program counter (PC): 32-bit length, indicates the location of the instruction to be executed.
- Program status (PS): 32-bit length, register for storing register pointer or condition codes
- Table base register (TBR): Holds top address of vector table used in EIT (Exceptional/Interrupt/Trap) processing.
- Return pointer (RP): Holds address to resume operation after returning from a subroutine.
- System stack pointer (SSP): Indicates system stack space.
- User's stack pointer (USP): Indicates user's stack space.
- Multiplication/division result register (MDH/MDL): 32-bit length, register for multiplication/division

Register Name	Description	Initial value
PC	Program counter	XXXX XXXXH Indeterminate
PS	Program status	
TBR	Table base register	000F FC00H
RP	Return pointer	XXXX XXXXH Indeterminate
SSP	System stack pointer	0000 0000H
USP	User's stack pointer	XXXX XXXXH Indeterminate
MDH	Multiplication/division result register	XXXX XXXXH Indeterminate
MDL		XXXX XXXXH Indeterminate

• Program status (PS)

The PS register is for holding program status and consists of a condition code register (CCR), a system condition code register (SCR) and a interrupt level mask register (ILM).

- **Condition code register (CCR)**

- S-flag: Specifies a stack pointer used as R15.
- I-flag: Controls user interrupt request enable/disable.
- N-flag: Indicates sign bit when division result is assumed to be in the 2's complement format.
- Z-flag: Indicates whether or not the result of division was "0".
- V-flag: Assumes the operand used in calculation in the 2's complement format and indicates whether or not overflow has occurred.
- C-flag: Indicates if a carry or borrow from the MSB has occurred.

- **System condition code register (SCR)**

- T-flag: Specifies whether or not to enable step trace trap.

- **Interrupt level mask register (ILM)**

ILM4 to ILM0: Register for holding interrupt level mask value. The value held by this register is used as a level mask. When an interrupt request issued to the CPU is higher than the level held by ILM, the interrupt request is accepted.

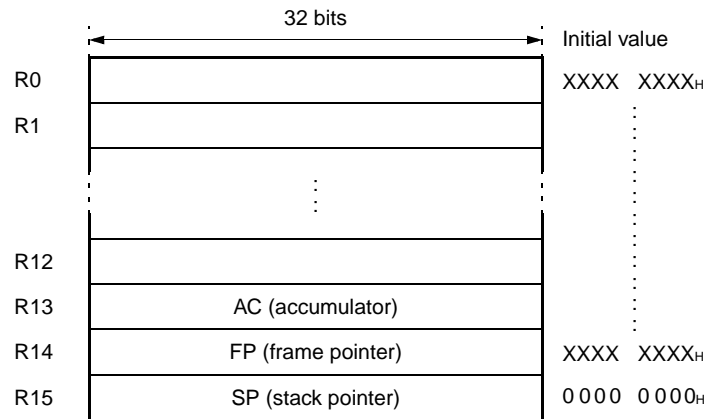

ILM4	ILM3	ILM2	ILM1	ILM0	Interrupt level	High-low
0	0	0	0	0	0	High ↑ ↓ Low
⋮					⋮	
0	1	0	0	0	15	
⋮					⋮	
1	1	1	1	1	31	

MB91101/MB91101A

■ GENERAL-PURPOSE REGISTERS

R0 to R15 are general-purpose registers embedded on the CPU. These registers functions as an accumulator and a memory access pointer (field for indicating address).

• Register bank structure

Of the above 16 registers, following registers have special functions. To support the special functions, part of the instruction set has been sophisticated to have enhanced functions.

- R13: Virtual accumulator (AC)
- R14: Frame pointer (FP)
- R15: Stack pointer (SP)

Upon reset, values in R0 to R14 are not fixed. Value in R15 is initialized to be 0000 0000H (SSP value).

■ SETTING MODE

1. Pin

• Mode setting pins and modes

Mode setting pins			Mode name	Reset vector access area	External data bus width	Bus mode
MD2	MD1	MD0				
0	0	0	External vector mode 0	External	8 bits	External ROM/external bus mode
0	0	1	External vector mode 1	External	16 bits	
0	1	0	—	—	—	Inhibited
0	1	1	Internal vector mode	Internal	(Mode register)	Single-chip mode*
1	—	—	—	—	—	Inhibited

* : MB91101 does not support single-chip mode.

2. Registers

• Mode setting registers (MODR) and modes

• Bus mode setting bits and functions

M1	M0	Functions	Note
0	0	Single-chip mode	
0	1	Internal ROM/external bus mode	
1	0	External ROM/external bus mode	
1	1	—	Inhibited

Note: Because of without internal ROM, MB91101 allows "10_B" setting value only.

■ PERIPHERAL RESOURCES

1. I/O Ports

There are 2 types of I/O port register structure; port data register (PDR0 to PDRF) and data direction register (DDR0 to DDRF), where bits PDR0 to PDRF and bits DDR0 to DDRF corresponds respectively. Each bit on the register corresponds to an external pin. In port registers input/output register of the port configures input/output function of the port, while corresponding bit (pin) configures input/output function in data direction registers. Bit "0" specifies input and "1" specifies output.

- For input (DDR = "0") setting;
PDR reading operation: reads level of corresponding external pin.
PDR writing operation: writes set value to PDR.
- For output (DDR = "1") setting;
PDR reading operation: reads PDR value.
PDR writing operation: outputs PDR value to corresponding external pin.

2. DMA Controller (DMAC)

The DMA controller is a module embedded in FR family devices, and performs DMA (direct memory access) transfer.

DMA transfer performed by the DMA controller transfers data without intervention of CPU, contributing to enhanced performance of the system.

- 8 channels
- Mode: single/block transfer, burst transfer and continuous transfer: 3 kinds of transfer
- Transfer all through the area
- Max. 65536 of transfer cycles
- Interrupt function right after the transfer
- Selectable for address transfer increase/decrease by the software
- External transfer request input pin, external transfer request accept output pin, external transfer complete output pin three pins for each

3. UART

The UART is a serial I/O port for supporting asynchronous (start-stop system) communication or CLK synchronous communication, and it has the following features.

The MB91101 consists of 3 channels of UART.

- Full double double buffer
- Both a synchronous (start-stop system) communication and CLK synchronous communication are available.
- Supporting multi-processor mode
- Perfect programmable baud rate
 - Any baud rate can be set by internal timer (refer to section “4. U-TIMER”).
- Any baud rate can be set by external clock.
- Error checking function (parity, framing and overrun)
- Transfer signal: NRZ code
- Enable DMA transfer/start by interrupt.

4. U-TIMER (16-bit Timer for UART Baud Rate Generation)

The U-TIMER is a 16-bit timer for generating UART baud rate. Combination of chip operating frequency and reload value of U-TIMER allows flexible setting of baud rate.

The U-TIMER operates as an interval timer by using interrupt issued on counter underflow.

The MB91101 has 3 channel U-TIMER embedded on the chip. An interval of up to $2^{16} \times \phi$ can be counted.

MB91101/MB91101A

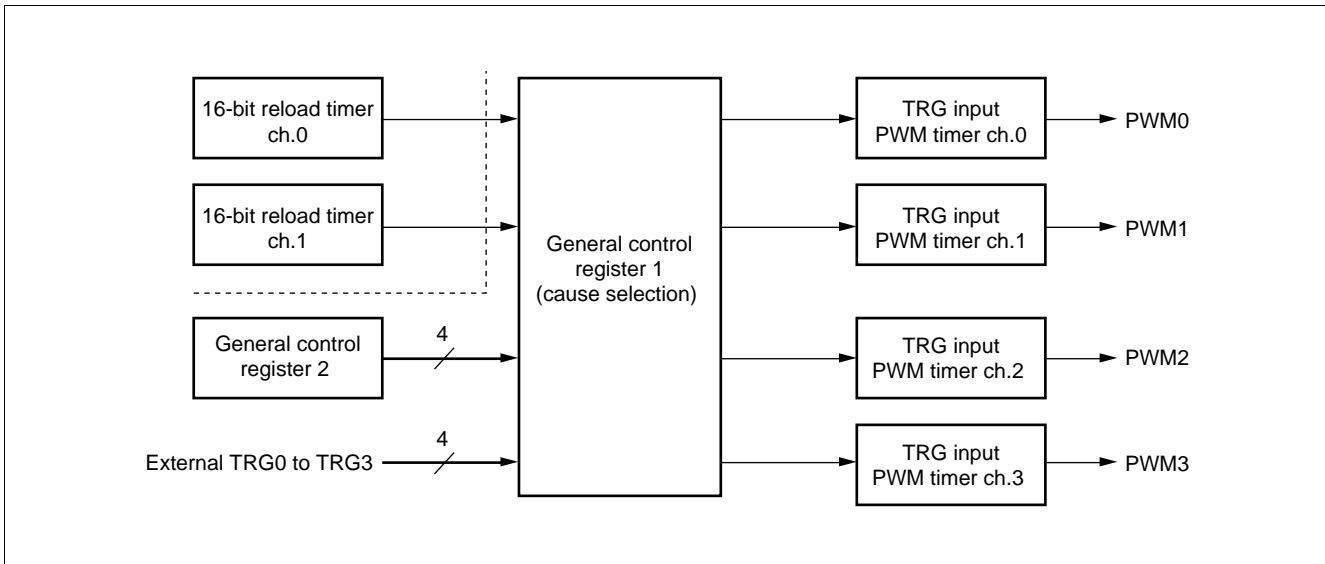

5. PWM Timer

The PWM timer can output high accurate PWM waves efficiently.

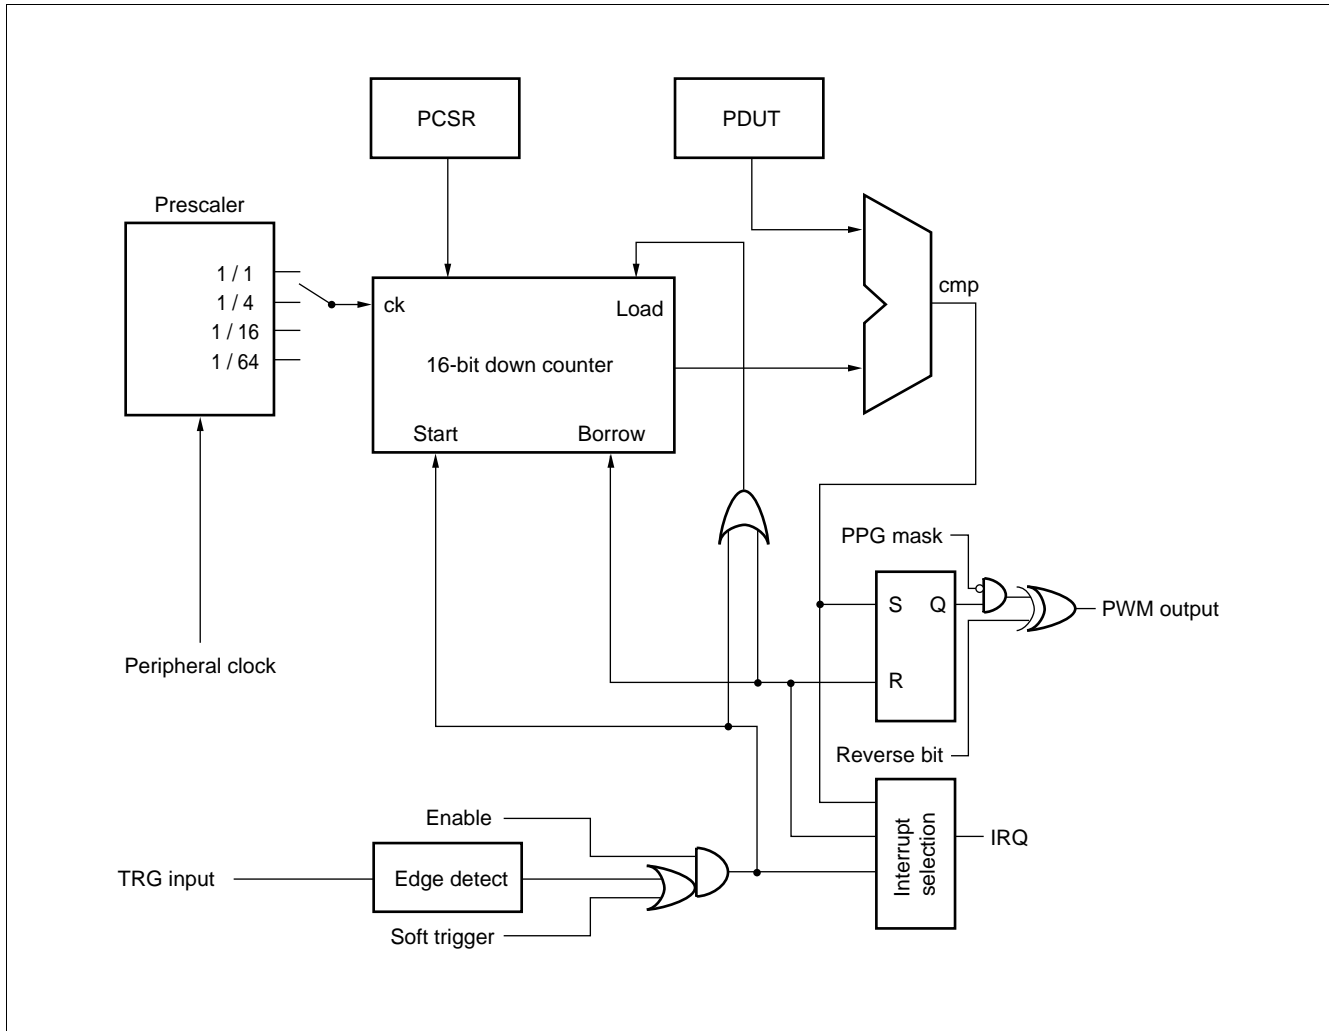

MB91101 has inner 4-channel PWM timers, and has the following features.

- Each channel consists of a 16-bit down counter, a 16-bit data register with a buffer for scyde setting, a 16-bit compare register with a buffer for duty setting, and a pin controller.
- The count clock of a 16-bit down counter can be selected from the following four inner clocks.
Inner clock ϕ , $\phi/4$, $\phi/16$, $\phi/64$
- The counter value can be initialized "FFFF_H" by the resetting or the counter borrow.
- PWM output (each channel)
- Resister description

8. 10-bit A/D Converter (Successive Approximation Conversion Type)

The A/D converter is the module which converts an analog input voltage to a digital value, and it has following features.

- Minimum converting time: 5.6 $\mu\text{s}/\text{ch.}$ (system clock: 25 MHz)
- Inner sample and hold circuit
- Resolution: 10 bits
- Analog input can be selected from 4 channels by program.
 - Single convert mode: 1 channel is selected and converted.
 - Scan convert mode: Converting continuous channels. Maximum 4 channels are programmable.
 - Continuous convert mode: Converting the specified channel repeatedly.
 - Stop convert mode: After converting one channel then stop and wait till next activation synchronising at the beginning of conversion can be performed.
- DMA transfer operation is available by interruption.
- Operating factor can be selected from the software, the external trigger (falling edge), and 16-bit reload timer (rising edge).

10. External Interrupt/NMI Control Block

The external interrupt/NMI control block controls external interrupt request signals input to $\overline{\text{NMI}}$ pin and INT0 to INT3 pins.

Detecting levels can be selected from "H", "L", rising edge and falling edge (not for $\overline{\text{NMI}}$ pin).

11. Delayed Interrupt Module

Delayed interrupt module is a module which generates a interrupt for changing a task. By using this delayed interrupt module, an interrupt request to CPU can be generated/cancelled by the software.

Refer to the section "9. Interrupt Controller" for delayed interrupt module block diagram.

12. Clock Generation (Low-power consumption mechanism)

The clock control block is a module which undertakes the following functions.

- CPU clock generation (including gear function)
- Peripheral clock generation (including gear function)
- Reset generation and cause hold
- Standby function (including hardware standby)
- DMA request prohibit
- PLL (multiplier circuit) embedded

13. External Bus Interface

The external bus interface controls the interface between the device and the external memory and also the external I/O, and has the following features.

- 25-bit (32 Mbytes) address output
- 6 independent banks owing to the chip select function.
Can be set to anywhere on the logical address space for minimum unit 64 Kbytes.
Total 32 Mbytes × 6 area setting is available by the address pin and the chip select pin.
- 8/16-bit bus width setting are available for every chip select area.
- Programmable automatic memory wait (max. for 7 cycles) can be inserted.
- DRAM interface support
Three kinds of DRAM interface: Double CAS DRAM (normally DRAM I/F)
Single CAS DRAM
Hyper DRAM
2 banks independent control (RAS, CAS, etc. control signals)
DRAM select is available from 2CAS/1WE and 1CAS/2WE.
Hi-speed page mode supported
CBR/self refresh supported
Programmable wave form
- Unused address/data pin can be used for I/O port.
- Little endian mode supported
- Clock doubler: Internal bus 50 MHz, external bus 25 MHz

■ ELECTRICAL CHARACTERISTICS

1. Absolute Maximum Ratings

($V_{SS} = AV_{SS} = 0.0\text{ V}$)

Parameter		Symbol	Value		Unit	Remarks
			Min.	Max.		
Power supply voltage	At 5 V power supply	V_{CC5}	$V_{SS} - 0.3$	$V_{SS} + 6.5$	V	
		V_{CC3}	—	—	V	
	At 3 V power supply	V_{CC5}	$V_{CC3} - 0.3$	$V_{SS} + 6.5$	V	*1
		V_{CC3}	$V_{SS} - 0.3$	$V_{SS} + 3.6$	V	*1
Analog supply voltage		AV_{CC}	$V_{SS} - 0.3$	$V_{SS} + 3.6$	V	*2
Analog reference voltage		AV_{RH}	$V_{SS} - 0.3$	$V_{SS} + 3.6$	V	*2
Analog pin input voltage		V_{IA}	$V_{SS} - 0.3$	$AV_{CC} + 0.3$	V	
Input voltage		V_I	$V_{SS} - 0.3$	$V_{CC5} + 0.3$	V	
Output voltage		V_O	$V_{SS} - 0.3$	$V_{CC5} + 0.3$	V	
“L” level maximum output current		I_{OL}	—	10	mA	*3
“L” level average output current		I_{OLAV}	—	4	mA	*4
“L” level maximum total output current		ΣI_{OL}	—	100	mA	
“L” level average total output current		ΣI_{OLAV}	—	50	mA	*5
“H” level maximum output current		I_{OH}	—	-10	mA	*3
“H” level average output current		I_{OHAV}	—	-4	mA	*4
“H” level maximum total output current		ΣI_{OH}	—	-50	mA	
“H” level average total output current		ΣI_{OHAV}	—	-20	mA	*5
Power consumption		P_D	—	500	mW	
Operating temperature		T_A	0	+70	°C	
Storage temperature		T_{stg}	-55	+150	°C	

*1: V_{CC5} must not be less than $V_{SS} - 0.3\text{ V}$.

*2: Make sure that the voltage does not exceed $V_{CC5} + 0.3\text{ V}$, such as when turning on the device.

*3: Maximum output current is a peak current value measured at a corresponding pin.

*4: Average output current is an average current for a 100 ms period at a corresponding pin.

*5: Average total output current is an average current for a 100 ms period for all corresponding pins.

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

MB91101/MB91101A

2. Recommended Operating Conditions

(1) At 5 V operation (4.5 V to 5.5 V)

($V_{SS} = AV_{SS} = 0.0\text{ V}$)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V_{CC5}	4.5	5.5	V	Normal operation
	V_{CC5}	*1	*1	V	Retaining the RAM state in stop mode
	V_{CC3}	—	—	V	*2
Analog supply voltage	AV_{CC}	$V_{SS} + 2.7$	$V_{CC} + 3.6$	V	
Analog reference voltage	AV_{RH}	$V_{SS} - 0.3$	AV_{CC}	V	
Operating temperature	T_A	0	+70	°C	
Smoothing capacitor	C_S	0.1	1.0	μF	V_{CC3} pin *2

*1: At V_{CC5} , the RAM state holding is not warranted in stop mode.

*2: V_{CC3} is used for the bypass capacitor pin.

*3: Use the ceramic capacitor or the capacitor whose frequency characteristic is equivalent to that of the ceramic capacitor.

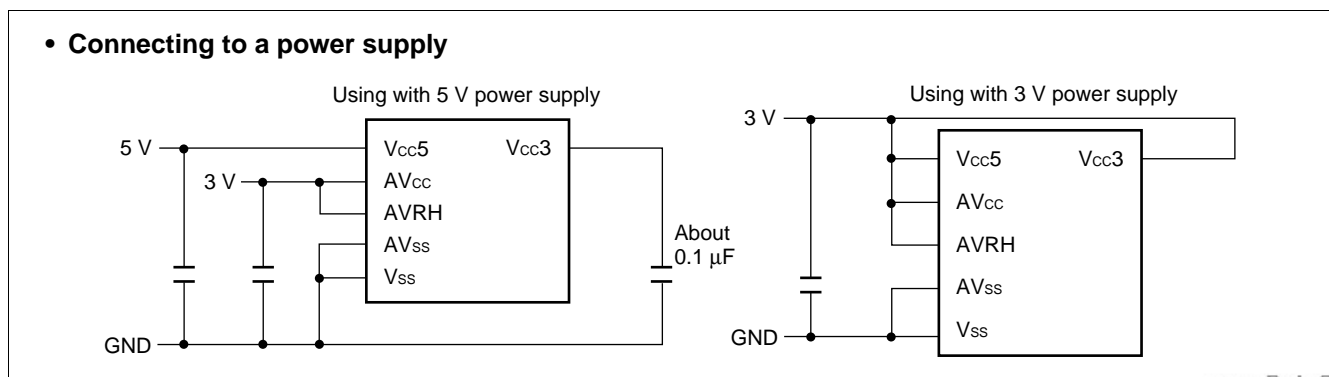

And select the larger capacity smoothing condenser to connect to the power supply (V_{CC5}) than C_S .

(2) At 3 V operation (2.7 V to 3.6 V)

($V_{SS} = AV_{SS} = 0.0\text{ V}$)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V_{CC5}	2.7	3.6	V	Normal operation
	V_{CC5}	2.7	3.6	V	Retaining the RAM state in stop mode
	V_{CC3}	2.7	3.6	V	*
Analog power supply voltage	AV_{CC}	$V_{SS} + 2.7$	$V_{CC} + 3.6$	V	
Analog reference voltage	AV_{RH}	AV_{SS}	AV_{CC}	V	
Operating temperature	T_A	0	+70	°C	

* : Connect to V_{CC5} for the power supply pin.

WARNING: Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representative beforehand.

MB91101/MB91101A

3. DC Characteristics

($V_{CC5} = 5.0\text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)
 ($V_{CC5} = V_{CC3} = 2.7\text{ V}$ to 3.6 V , $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
“H” level input voltage	V_{IH}	Input pin except for hysteresis input	—	$0.65 \times V_{CC3}$	—	$V_{CC5} + 0.3$	V	*
	V_{IHS}	\overline{HST} , \overline{NMI} , \overline{RST} , PA1 to PA6, PB0 to PB7, PE0 to PE7, PF0 to PF7	—	$0.8 \times V_{CC3}$	—	$V_{CC5} + 0.3$	V	Hysteresis input *
“L” level input voltage	V_{IL}	Input other than following symbols	—	$V_{SS} - 0.3$	—	$0.25 \times V_{CC3}$	V	*
	V_{ILS}	\overline{HST} , \overline{NMI} , \overline{RST} , PA1 to PA6, PB0 to PB7, PE0 to PE7, PF0 to PF7	—	$V_{SS} - 0.3$	—	$0.2 \times V_{CC3}$	V	Hysteresis input *
“H” level output voltage	V_{OH}	D16 to D31, A00 to A24, P6 to PF	$V_{CC5} = 4.5\text{ V}$ $I_{OH} = -4.0\text{ mA}$	$V_{CC} - 0.5$	—	—	V	
“L” level output voltage	V_{OL}	D16 to D31, A00 to A24, P6 to PF	$V_{CC5} = 4.5\text{ V}$ $I_{OL} = 4.0\text{ mA}$	—	—	0.4	V	
Input leakage current (Hi-Z output leakage current)	I_{LI}	D00 to D31, A00 to A23, P8 to PF	$V_{CC5} = 5.5\text{ V}$ $0.45\text{ V} < V_I < V_{CC}$	-5	—	+5	μA	
Pull-up resistance	R_{PULL}	\overline{RST}	$V_{CC5} = 5.5\text{ V}$ $V_I = 0.45\text{ V}$	25	50	100	$\text{k}\Omega$	
Power supply current	I_{CC}	V_{CC}	$F_C = 12.5\text{ MHz}$ $V_{CC5} = 5.5\text{ V}$	—	75	100	mA	(4 multiplication) Operation at 50 MHz
	I_{CCS}	V_{CC}	$F_C = 12.5\text{ MHz}$ $V_{CC5} = 5.5\text{ V}$	—	40	60	mA	Sleep mode
	I_{CCH}	V_{CC}	$T_A = +25^\circ\text{C}$ $V_{CC5} = 5.5\text{ V}$	—	10	100	μA	Stop mode
Input capacitance	C_{IN}	Except for V_{CC5} , V_{CC3} , AV_{CC} , AV_{SS} , V_{SS}	—	—	10	—	pF	

* : $V_{CC3} = 3.3 \pm 0.2\text{ V}$ (internal regulator output voltage) when using 5 V power supply, $V_{CC3} =$ power supply voltage when using 3 V power supply (internal regulator unused)

4. AC Characteristics

Measurement Conditions

- $V_{CC} = 5.0\text{ V} \pm 10\%$

Parameter	Symbol	Value			Unit	Remarks

(1) Clock Timing Rating

(V_{cc5} = 5.0 V ±10%, V_{ss} = AV_{ss} = 0.0 V, T_A = 0°C to +70°C)
 (V_{cc5} = V_{cc3} = 2.7 V to 3.6 V, V_{ss} = AV_{ss} = 0.0 V, T_A = 0°C to +70°C)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Clock frequency	f _c	X0, X1	When using PLL	10	12.5	MHz	
	f _c	X0, X1	Self-oscillation (divide-by-2 input)	10	25	MHz	
	f _c	X0, X1	External clock (divide-by-2 input)	10	25	MHz	
Clock cycle time	t _c	X0, X1	When using PLL	80	100	ns	
	t _c	X0, X1	—	40	100	ns	
Frequency shift ratio (when locked)	Δf	—	When using PLL	—	5	%	*1
Input clock pulse width	P _{WH} , P _{WL}	X0, X1	—	25	—	ns	Input to X0 only, when using 5 V power supply
	P _{WH} , P _{WL}	X0, X1		10	—	ns	Input to X0, X1
Input clock rising/falling time	t _{CR} , t _{CF}	X0, X1		—	8	ns	(t _{CR} + t _{CF})
Internal operating clock frequency	f _{CP}	—	CPU system	0.625*2	50	MHz	
	f _{CPB}	—	Bus system	0.625*2	25*3	MHz	
	f _{CPP}	—	Peripheral system	0.625*2	25	MHz	
Internal operating clock cycle time	t _{CP}	—	CPU system	20	1600*2	ns	
	t _{CPB}	—	Bus system	40*3	1600*2	ns	
	t _{CPP}	—	Peripheral system	40	1600*2	ns	

*1: Frequency shift ratio stands for deviation ratio of the operating clock from the center frequency in the clock multiplication system.

*2: These values are for a minimum clock of 10 MHz input to X0, a divide-by-2 system of the source oscillation and a 1/8 gear.

*3: Values when using the doubler and CPU operation at 50 MHz.

- Clock timing rating measurement conditions

(2) Clock Output Timing

($V_{CC5} = 5.0\text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C to } +70^\circ\text{C}$)
 ($V_{CC5} = V_{CC3} = 2.7\text{ V to } 3.6\text{ V}$, $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C to } +70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Cycle time	t_{CYC}	CLK	—	t_{CP}	—	ns	*1
	t_{CYC}	CLK	Using the doubler	t_{CPB}	—	ns	
CLK $\uparrow \rightarrow$ CLK \downarrow	t_{CHCL}	CLK	—	$1/2 \times t_{CYC} - 10$	$1/2 \times t_{CYC} + 10$	ns	*2
CLK $\downarrow \rightarrow$ CLK \uparrow	t_{CLCH}	CLK		$1/2 \times t_{CYC} - 10$	$1/2 \times t_{CYC} + 10$	ns	*3

t_{CP} , t_{CPB} (internal operating clock cycle time): Refer to “(1) Clock Timing Rating.”

*1: t_{CYC} is a frequency for 1 clock cycle including a gear cycle.
 Use the doubler when CPU frequency is above 25 MHz.

*2: Rating at a gear cycle of $\times 1$.

When a gear cycle of 1/2, 1/4, 1/8 is selected, substitute “n” in the following equations with 1/2, 1/4, 1/8, respectively.

Min. : $(1 - n/2) \times t_{CYC} - 10$

Max. : $(1 - n/2) \times t_{CYC} + 10$

Select a gear cycle of $\times 1$ when using the doubler.

*3: Rating at a gear cycle of $\times 1$.

When a gear cycle of 1/2, 1/4, 1/8 is selected, substitute “n” in the following equations with 1/2, 1/4, 1/8, respectively.

Min. : $n/2 \times t_{CYC} - 10$

Max. : $n/2 \times t_{CYC} + 10$

Select a gear cycle of $\times 1$ when using the doubler.

MB91101/MB91101A

The relation between source oscillation input and CLK pin for configured by CHC/CCK1/CCK0 settings of GCR (gear control register) is as follows:

However, in this chart source oscillation input means X0 input clock.

• Ceramic oscillator applications

MB91101/MB91101A

(3) Reset/Hardware Standby Input Ratings

($V_{CC5} = 5.0\text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)
 ($V_{CC5} = V_{CC3} = 2.7\text{ V}$ to 3.6 V , $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Reset input time	t_{RSTL}	$\overline{\text{RST}}$	—	$t_{CP} \times 5$	—	ns	
Hardware standby input time	t_{HSTL}	$\overline{\text{HST}}$		$t_{CP} \times 5$	—	ns	

t_{CP} (internal operating clock cycle time): Refer to “(1) Clock Timing Rating.”

(4) Power on Supply Specifications (Power-on Reset)

($V_{CC5} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)
 ($V_{CC5} = V_{CC3} = 2.7 \text{ V}$ to 3.6 V , $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
Power supply rising time	t_R	V_{CC}	$V_{CC} = 5.0 \text{ V}$	50	—	μs	*
	t_R	V_{CC}		—	30	ms	*
	t_R	V_{CC}	$V_{CC} = 3.0/3.3 \text{ V}$	50	—	μs	*
	t_R	V_{CC}		—	18	ms	*
Power supply shut off time	t_{OFF}	V_{CC}	—	1	—	ms	Repeated operations
Oscillation stabilizing time	t_{OSC}	—	—	$2 \times t_c \times 2^{21} + 100 \mu\text{s}$	—	ns	

t_c (clock cycle time): Refer to "(1) Clock Timing Rating."

* : $V_{CC} < 0.2 \text{ V}$ before the power supply rising

Note: Sudden change in supply voltage during operation may initiate a power-on sequence. To change supply voltage during operation, it is recommended to smoothly raise the voltage to avoid rapid fluctuations in the supply voltage.

t_{RSTL} : Reset input time

*: Reset can't be done during regulator stabilizing time.

Note: Set $\overline{\text{RST}}$ pin to "L" level when turning on the device, at least the described above duration after the supply voltage reaches V_{CC} is necessary before turning the $\overline{\text{RST}}$ to "H" level.

MB91101/MB91101A

(5) Normal Bus Access Read/write Operation

($V_{CC5} = 5.0\text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)
 ($V_{CC5} = V_{CC3} = 2.7\text{ V}$ to 3.6 V , $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
$\overline{CS0}$ to $\overline{CS5}$ delay time	t_{CHCSL}	CLK, $\overline{CS0}$ to $\overline{CS5}$	—	—	15	ns	
	t_{CHCSH}	CLK, $\overline{CS0}$ to $\overline{CS5}$		—	15	ns	
Address delay time	t_{CHAV}	CLK, A24 to A00		—	15	ns	
Data delay time	t_{CHDV}	CLK, D31 to D16		—	15	ns	
\overline{RD} delay time	t_{CLRL}	CLK, \overline{RD}		—	6	ns	
	t_{CLRH}	CLK, \overline{RD}		—	6	ns	
$\overline{WR0}$, $\overline{WR1}$ delay time	t_{CLWL}	CLK, $\overline{WR0}$, $\overline{WR1}$		—	6	ns	
	t_{CLWH}	CLK, $\overline{WR0}$, $\overline{WR1}$		—	6	ns	
Valid address → valid data input time	t_{AVDV}	A24 to A00, D31 to D16		—	$\frac{3}{2} \times t_{CYC} - 25$	ns	*1 *2
$\overline{RD} \downarrow \rightarrow$ valid data input time	t_{RLDV}	\overline{RD} , D31 to D16		—	$t_{CYC} - 10$	ns	*1
Data set up → $\overline{RD} \uparrow$ time	t_{DSRH}	\overline{RD} , D31 to D16		10	—	ns	
$\overline{RD} \uparrow \rightarrow$ data hold time	t_{RHDX}	\overline{RD} , D31 to D16		0	—	ns	

t_{CYC} (a cycle time of peripheral system clock): Refer to “(2) Clock Output Timing.”

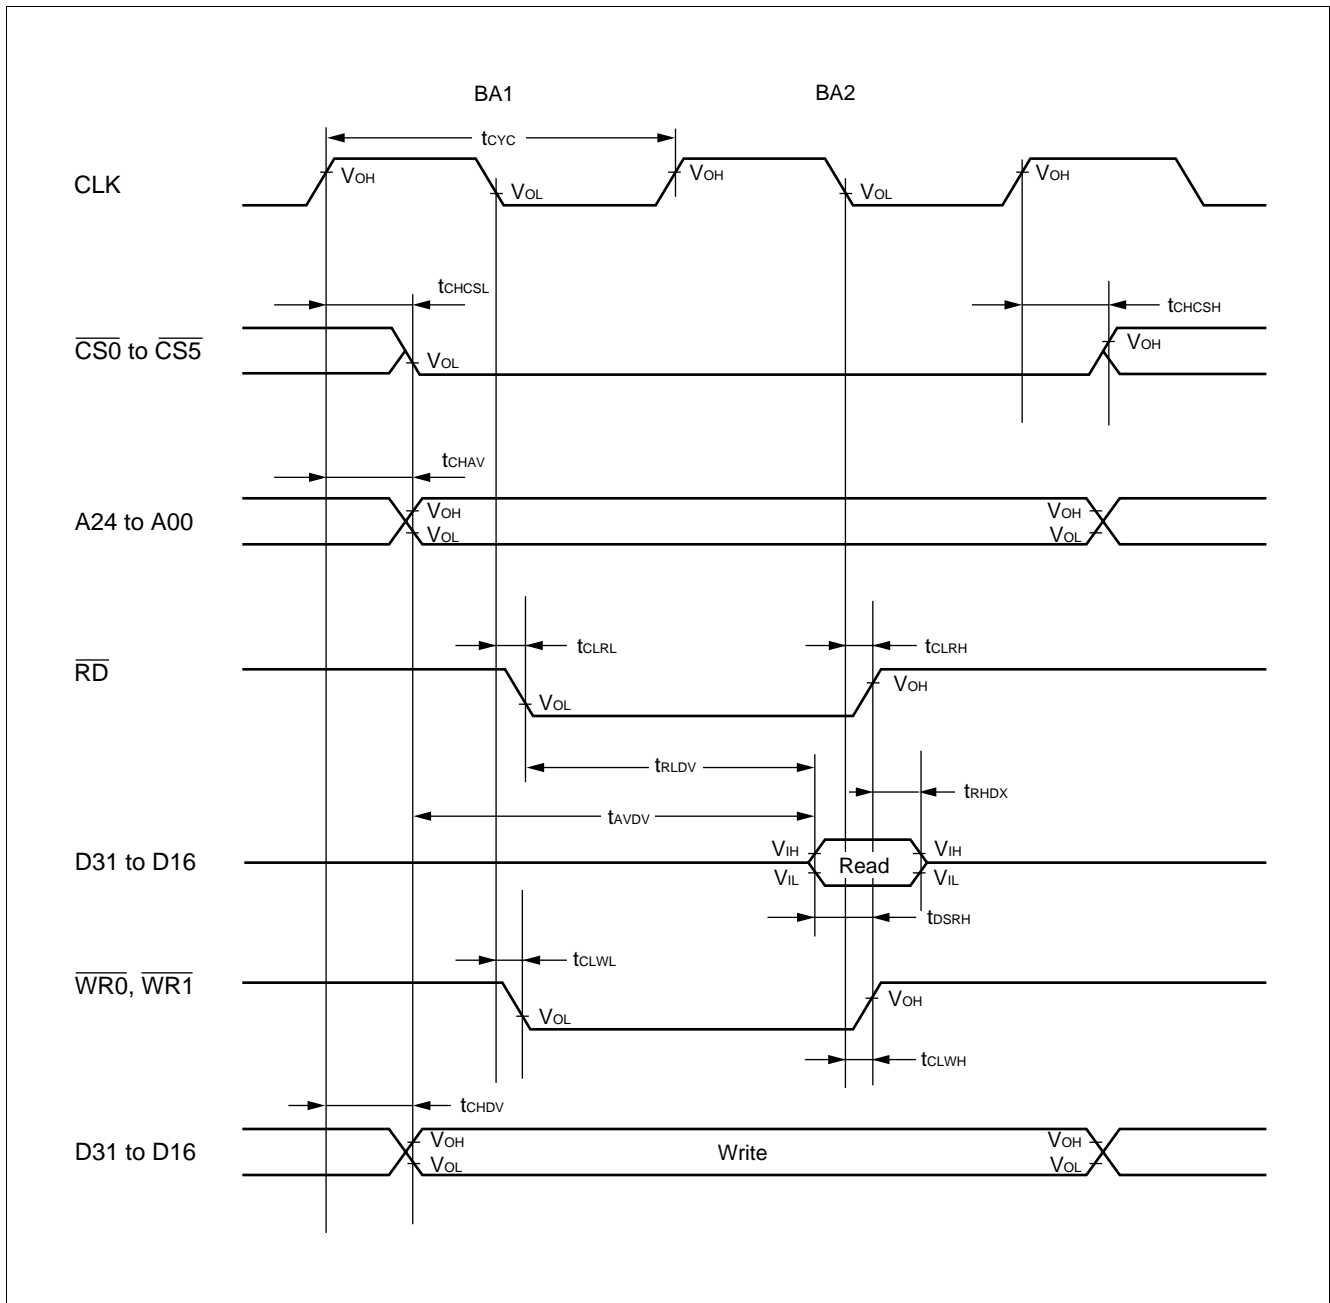

*1: When bus timing is delayed by automatic wait insertion or RDY input, add ($t_{CYC} \times$ extended cycle number for delay) to this rating.

*2: Rating at a gear cycle of $\times 1$.

When a gear cycle of 1/2, 1/4, 1/8 is selected, substitute “n” in the following equation with 1/2, 1/4, 1/8, respectively.

$$\text{Equation: } (2 - n/2) \times t_{CYC} - 25$$

MB91101/MB91101A

MB91101/MB91101A

(6) Ready Input Timing

($V_{CC5} = 5.0\text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C to } +70^\circ\text{C}$)
 ($V_{CC5} = V_{CC3} = 2.7\text{ V to } 3.6\text{ V}$, $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C to } +70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
RDY set up time → CLK ↓	t_{RDYS}	RDY, CLK	—	15	—	ns	
CLK ↓ → RDY hold time	t_{RDYH}	RDY, CLK	—	0	—	ns	

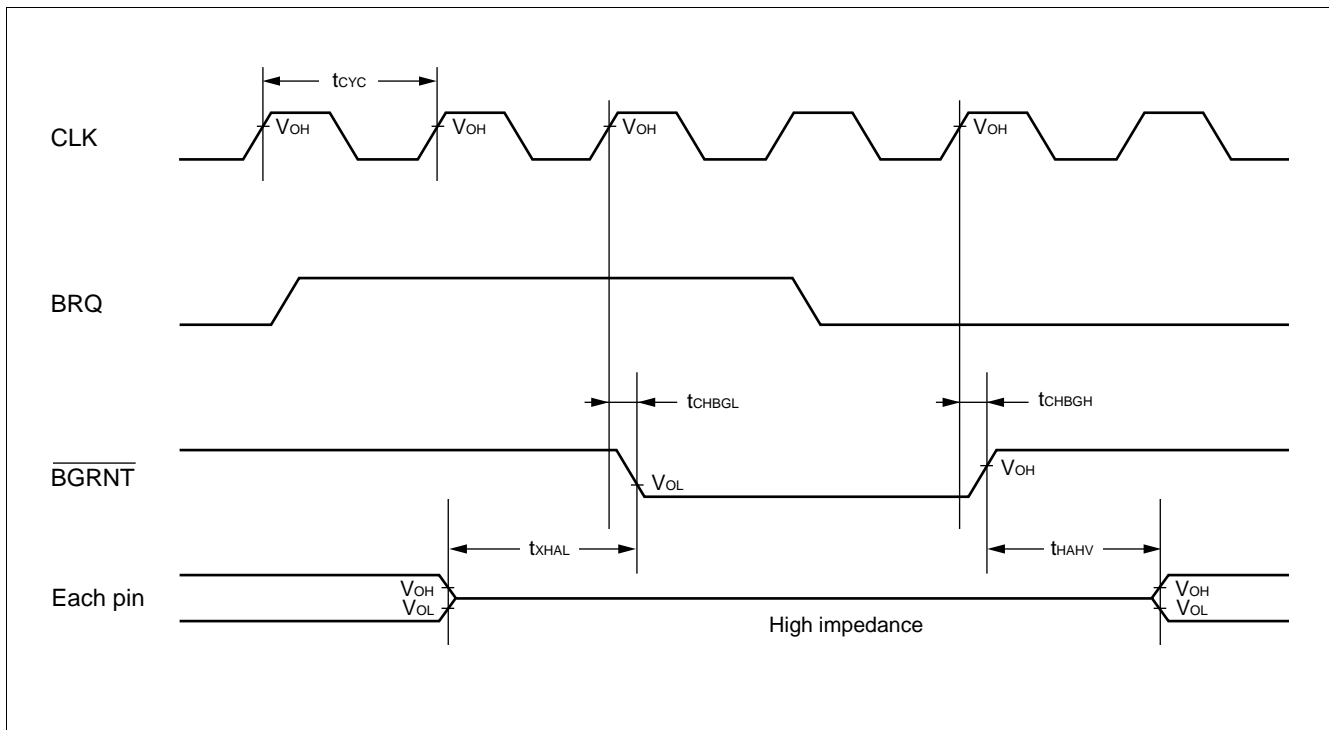

(7) Hold Timing

($V_{CC5} = 5.0\text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)
 ($V_{CC5} = V_{CC3} = 2.7\text{ V}$ to 3.6 V , $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
$\overline{\text{BGRNT}}$ delay time	t_{CHBGL}	CLK, $\overline{\text{BGRNT}}$	—	—	6	ns	
	t_{CHBGH}	CLK, $\overline{\text{BGRNT}}$		—	6	ns	
Pin floating \rightarrow $\overline{\text{BGRNT}}$ \downarrow time	t_{XHAL}	$\overline{\text{BGRNT}}$		$t_{\text{CYC}} - 10$	$t_{\text{CYC}} + 10$	ns	
$\overline{\text{BGRNT}}$ \uparrow \rightarrow pin valid time	t_{HAHV}	$\overline{\text{BGRNT}}$		$t_{\text{CYC}} - 10$	$t_{\text{CYC}} + 10$	ns	

t_{CYC} (a cycle time of peripheral system clock): Refer to “(2) Clock Output Timing.”

Note: There is a delay time of more than 1 cycle from BRQ input to $\overline{\text{BGRNT}}$ change.

MB91101/MB91101A

(8) Normal DRAM Mode Read/Write Cycle

($V_{CC5} = 5.0\text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)
 ($V_{CC5} = V_{CC3} = 2.7\text{ V}$ to 3.6 V , $V_{SS} = AV_{SS} = 0.0\text{ V}$, $T_A = 0^\circ\text{C}$ to $+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit	Remarks
				Min.	Max.		
RAS delay time	t _{CLRAH}	CLK, RAS	—	—	6	ns	
	t _{CHRAL}	CLK, RAS		—	6	ns	
CAS delay time	t _{CLCASL}	CLK, CAS		—	6	ns	
	t _{CLCASH}	CLK, CAS		—	6	ns	
ROW address delay time	t _{CHRAV}	CLK, A24 to A00		—	15	ns	
COLUMN address delay time	t _{CHCAV}	CLK, A24 to A00		—	15	ns	
\overline{DW} delay time	t _{CHDWL}	CLK, \overline{DW}		—	15	ns	
	t _{CHDWH}	CLK, \overline{DW}		—	15	ns	
Output data delay time	t _{CHDV1}	CLK, D31 to D16		—	15	ns	
RAS $\downarrow \rightarrow$ valid data input time	t _{RLDV}	RAS, D31 to D16		—	$\frac{5}{2} \times t_{CYC} - 16$	ns	*1 *2
CAS $\downarrow \rightarrow$ valid data input time	t _{CLDV}	CAS, D31 to D16		—	$t_{CYC} - 17$	ns	*1
CAS $\uparrow \rightarrow$ data hold time	t _{CADH}	CAS, D31 to D16		0	—	ns	

t_{CYC} (a cycle time of peripheral system clock): Refer to “(2) Clock Output Timing.”

CAS: CS0L to CS1H pins are for CAS signal outputs.

\overline{DW} : $\overline{DW0}$, $\overline{DW1}$ and CS0H to CS1H are used for \overline{WE} outputs.

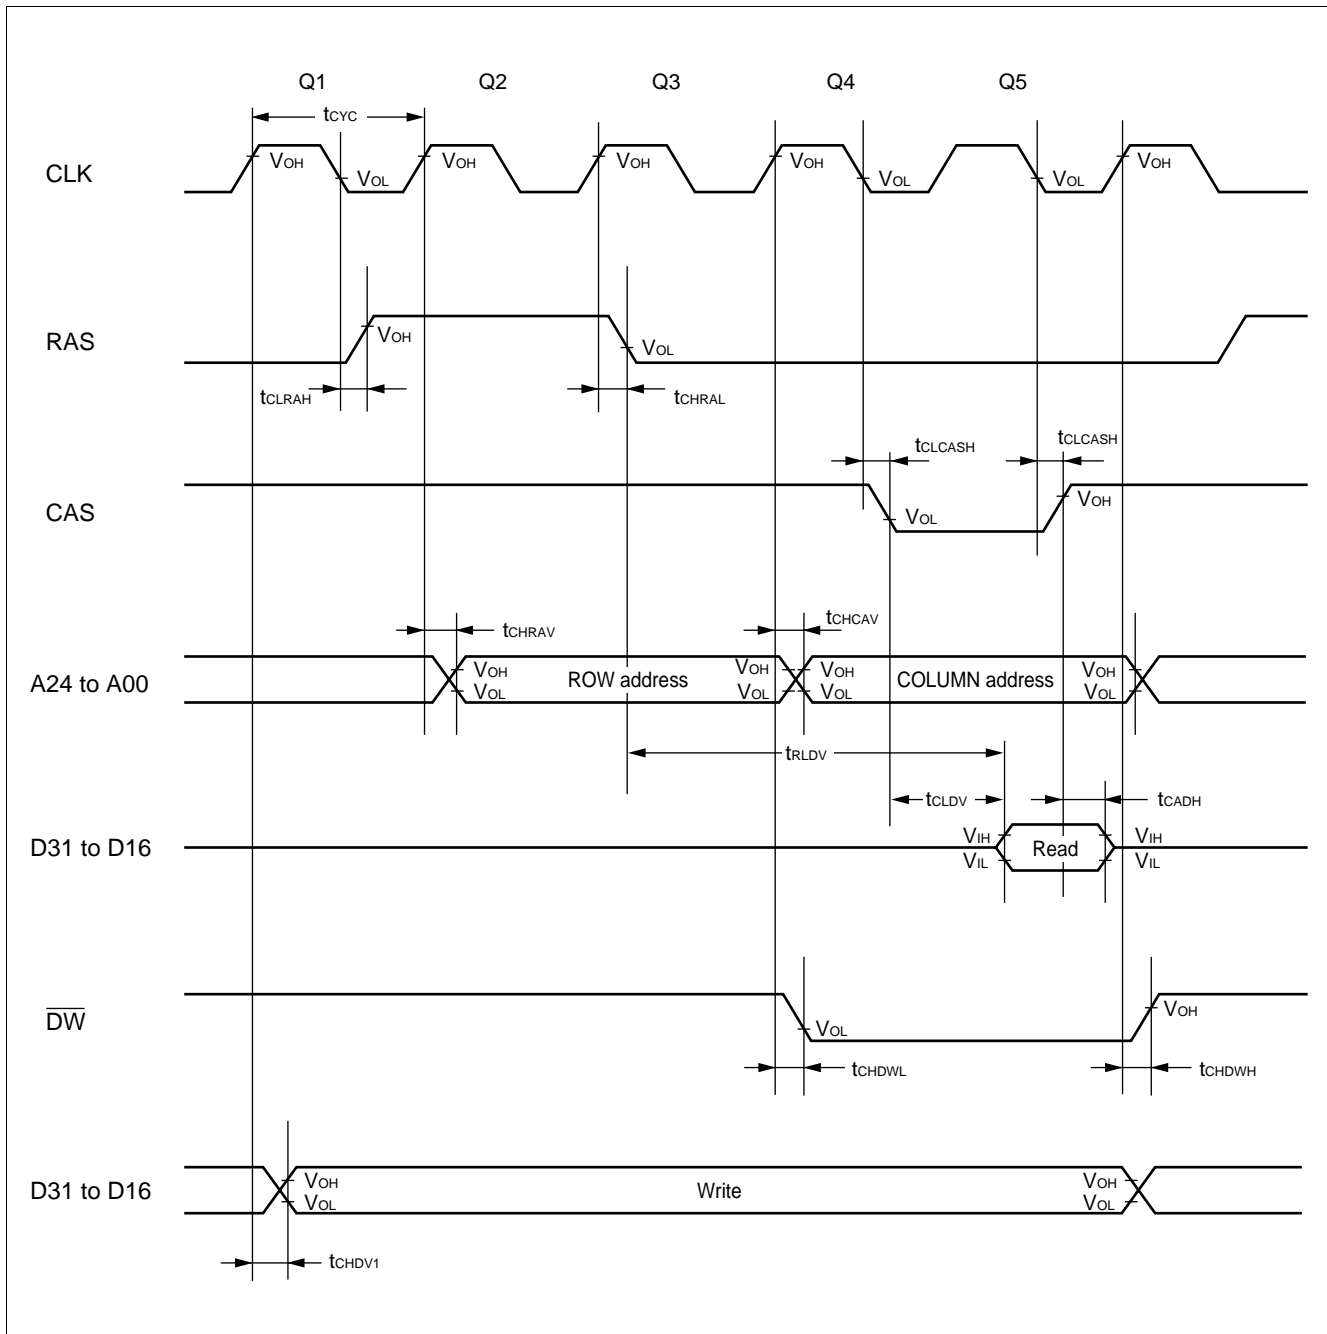

*1: When Q1 cycle or Q4 cycle is extended for 1 cycle, add t_{CYC} time to this rating.

*2: Rating at a gear cycle of $\times 1$.

When a gear cycle of 1/2, 1/4, 1/8 is selected, substitute “n” in the following equation with 1/2, 1/4, 1/8, respectively.

$$\text{Equation: } (3 - n/2) \times t_{CYC} - 16$$

	t_{CHEH}	CLK, EOP0 to EOP2		—	6	ns	

t_{CYC} (a cycle time of peripheral system clock): Refer to “(2) Clock Output Timing.”

5. A/D Converter Block Electrical Characteristics

($AV_{CC} = 2.7\text{ V to }3.6\text{ V}$, $AV_{SS} = 0.0\text{ V}$, $AVRH = 2.7\text{ V}$, $T_A = 0^\circ\text{C to }+70^\circ\text{C}$)

Parameter	Symbol	Pin name	Value			Unit
			Min.	Typ.	Max.	
Resolution	—	—	—	10	10	bit
Total error	—	—	—	—	± 4.0	LSB
Linearity error	—	—	—	—	± 3.5	LSB
Differentiation linearity error	—	—	—	—	± 2.0	LSB
Zero transition voltage	V_{OT}	AN0 to AN3	-1.5	+0.5	+2.5	LSB
Full-scale transition voltage	V_{FST}	AN0 to AN3	$AVRH - 4.5$	$AVRH - 1.5$	$AVRH + 0.5$	LSB
Conversion time	—	—	5.6 *1	—	—	μs
Analog port input current	I_{AIN}	AN0 to AN3	—	0.1	10	μA
Analog input voltage	V_{AIN}	AN0 to AN3	AV_{SS}	—	$AVRH$	V
Reference voltage	—	$AVRH$	AV_{SS}	—	AV_{CC}	V
Power supply current	I_A	AV_{CC}	—	4	—	mA
	I_{AH}	AV_{CC}	—	—	5 *2	μA
Reference voltage supply current	I_R	$AVRH$	—	200	—	μA
	I_{RH}	$AVRH$	—	—	5 *2	μA
Conversion variance between channels	—	AN0 to AN3	—	—	4	LSB

*1: $AV_{CC} = 2.7\text{ V} - 3.6\text{ V}$

*2: Current value for A/D converters not in operation, CPU stop mode ($V_{CC} = AV_{CC} = AVRH = 3.6\text{ V}$)

Notes: • As the absolute value of $AVRH$ decreases, relative error increases.

• Output impedance of external circuit of analog input under following conditions;

Output impedance of external circuit $< 10\text{ k}\Omega$.

If output impedance of external circuit is too high, analog voltage sampling time may be too short for accurate sampling (sampling time is $5.6\text{ }\mu\text{s}$ for a machine clock of 25 MHz).

• Analog input circuit model plan

Note: Listed values are for reference purposes only.

(Continued)

- Total error

A difference between actual value and theoretical value. The overall error includes zero-transition error, full-scale transition error and linearity error.

$$\text{Total error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB}' \times (N - 1) + 0.5 \text{ LSB}'\}}{1 \text{ LSB}'} \quad [\text{LSB}]$$

$$1 \text{ LSB}' \text{ (ideal value)} = \frac{AVRH - AVRL}{1024} \quad [\text{V}]$$

$$V_{OT}' \text{ (ideal value)} = AVRL + 0.5 \text{ LSB}' \quad [\text{V}]$$

$$V_{FST}' \text{ (ideal value)} = AVRH - 1.5 \text{ LSB}' \quad [\text{V}]$$

V_{NT} : A voltage for causing transition of digital output from $(N - 1)$ to N

MB91101/MB91101A

2. V_{CC} vs. I_{CC} characteristics

■ INSTRUCTIONS (165 INSTRUCTIONS)

1. How to Read Instruction Set Summary

Mnemonic	Type	OP	CYC	NZVC	Operation	Remarks
ADD Rj, Ri	A	A6	1	CCCC	$Ri + Rj \rightarrow Ri$	
* ADD #s5, Ri	C	A4	1	CCCC	$Ri + s5 \rightarrow Ri$	
,	,	,	,	,	,	
,	,	,	,	,	,	
↓	↓	↓	↓	↓	↓	
(1)	(2)	(3)	(4)	(5)	(6)	(7)

(1) Names of instructions

Instructions marked with * are not included in CPU specifications. These are extended instruction codes added/extended at assembly language levels.

(2) Addressing modes specified as operands are listed in symbols.

Refer to "2. Addressing mode symbols" for further information.

(3) Instruction types

(4) Hexa-decimal expressions of instructions

(5) The number of machine cycles needed for execution

a: Memory access cycle and it has possibility of delay by Ready function.

b: Memory access cycle and it has possibility of delay by Ready function.

If an object register in a LD operation is referenced by an immediately following instruction, the interlock function is activated and number of cycles needed for execution increases.

c: If an immediately following instruction operates to an object of R15, SSP or USP in read/write mode or if the instruction belongs to instruction format A group, the interlock function is activated and number of cycles needed for execution increases by 1 to make the total number of 2 cycles needed.

d: If an immediately following instruction refers to MDH/MDL, the interlock function is activated and number of cycles needed for execution increases by 1 to make the total number of 2 cycles needed.

For a, b, c and d, minimum execution cycle is 1.

(6) Change in flag sign

- Flag change

C : Change

– : No change

0 : Clear

1 : Set

- Flag meanings

N : Negative flag

Z : Zero flag

V : Over flag

C : Carry flag

(7) Operation carried out by instruction

2. Addressing Mode Symbols

Ri	: Register direct (R0 to R15, AC, FP, SP)
Rj	: Register direct (R0 to R15, AC, FP, SP)
R13	: Register direct (R13, AC)
Ps	: Register direct (Program status register)
Rs	: Register direct (TBR, RP, SSP, USP, MDH, MDL)
CRi	: Register direct (CR0 to CR15)
CRj	: Register direct (CR0 to CR15)
#i8	: Unsigned 8-bit immediate (–128 to 255) Note: –128 to –1 are interpreted as 128 to 255
#i20	: Unsigned 20-bit immediate (–0X80000 to 0XFFFFFF) Note: –0X7FFFF to –1 are interpreted as 0X7FFFF to 0XFFFFFF
#i32	: Unsigned 32-bit immediate (–0X80000000 to 0xFFFFFFFF) Note: –0X80000000 to –1 are interpreted as 0X80000000 to 0xFFFFFFFF
#s5	: Signed 5-bit immediate (–16 to 15)
#s10	: Signed 10-bit immediate (–512 to 508, multiple of 4 only)
#u4	: Unsigned 4-bit immediate (0 to 15)
#u5	: Unsigned 5-bit immediate (0 to 31)
#u8	: Unsigned 8-bit immediate (0 to 255)
#u10	: Unsigned 10-bit immediate (0 to 1020, multiple of 4 only)
@dir8	: Unsigned 8-bit direct address (0 to 0XFF)
@dir9	: Unsigned 9-bit direct address (0 to 0X1FE, multiple of 2 only)
@dir10	: Unsigned 10-bit direct address (0 to 0X3FC, multiple of 4 only)
label9	: Signed 9-bit branch address (–0X100 to 0XFC, multiple of 2 only)
label12	: Signed 12-bit branch address (–0X800 to 0X7FC, multiple of 2 only)
label20	: Signed 20-bit branch address (–0X80000 to 0X7FFFF)
label32	: Signed 32-bit branch address (–0X80000000 to 0X7FFFFFFF)
@Ri	: Register indirect (R0 to R15, AC, FP, SP)
@Rj	: Register indirect (R0 to R15, AC, FP, SP)
@(R13, Rj)	: Register relative indirect (Rj: R0 to R15, AC, FP, SP)
@(R14, disp10)	: Register relative indirect (disp10: –0X200 to 0X1FC, multiple of 4 only)
@(R14, disp9)	: Register relative indirect (disp9: –0X100 to 0XFE, multiple of 2 only)
@(R14, disp8)	: Register relative indirect (disp8: –0X80 to 0X7F)
@(R15, udisp6)	: Register relative (udisp6: 0 to 60, multiple of 4 only)
@Ri+	: Register indirect with post-increment (R0 to R15, AC, FP, SP)
@R13+	: Register indirect with post-increment (R13, AC)
@SP+	: Stack pop
@–SP	: Stack push
(reglist)	: Register list

3. Instruction Types

MB91101/MB91101A

4. Detailed Description of Instructions

• Add/subtract operation instructions (10 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
ADD Rj, Ri	A	A6	1	C C C C	$Ri + Rj \rightarrow Ri$	MSB is interpreted as a sign in assembly language
* ADD #s5, Ri	C'	A4	1	C C C C	$Ri + s5 \rightarrow Ri$	
ADD #i4, Ri	C	A4	1	C C C C	$Ri + \text{extu}(i4) \rightarrow Ri$	Zero-extension
ADD2 #i4, Ri	C	A5	1	C C C C	$Ri + \text{extu}(i4) \rightarrow Ri$	Sign-extension
ADDC Rj, Ri	A	A7	1	C C C C	$Ri + Rj + c \rightarrow Ri$	Add operation with sign
ADDN Rj, Ri	A	A2	1	- - - -	$Ri + Rj \rightarrow Ri$	MSB is interpreted as a sign in assembly language
* ADDN #s5, Ri	C'	A0	1	- - - -	$Ri + s5 \rightarrow Ri$	
ADDN #i4, Ri	C	A0	1	- - - -	$Ri + \text{extu}(i4) \rightarrow Ri$	Zero-extension
ADDN2 #i4, Ri	C	A1	1	- - - -	$Ri + \text{extu}(i4) \rightarrow Ri$	Sign-extension
SUB Rj, Ri	A	AC	1	C C C C	$Ri - Rj \rightarrow Ri$	
SUBC Rj, Ri	A	AD	1	C C C C	$Ri - Rj - c \rightarrow Ri$	Subtract operation with carry
SUBN Rj, Ri	A	AE	1	- - - -	$Ri - Rj \rightarrow Ri$	

• Compare operation instructions (3 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
CMP Rj, Ri	A	AA	1	C C C C	$Ri - Rj$	MSB is interpreted as a sign in assembly language
* CMP #s5, Ri	C'	A8	1	C C C C	$Ri - s5$	
CMP #i4, Ri	C	A8	1	C C C C	$Ri + \text{extu}(i4)$	Zero-extension
CMP2 #i4, Ri	C	A9	1	C C C C	$Ri + \text{extu}(i4)$	Sign-extension

• Logical operation instructions (12 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
AND Rj, Ri	A	82	1	C C - -	$Ri \& = Rj$	Word
AND Rj, @Ri	A	84	1 + 2a	C C - -	$(Ri) \& = Rj$	Word
ANDH Rj, @Ri	A	85	1 + 2a	C C - -	$(Ri) \& = Rj$	Half word
ANDB Rj, @Ri	A	86	1 + 2a	C C - -	$(Ri) \& = Rj$	Byte
OR Rj, Ri	A	92	1	C C - -	$Ri = Rj$	Word
OR Rj, @Ri	A	94	1 + 2a	C C - -	$(Ri) = Rj$	Word
ORH Rj, @Ri	A	95	1 + 2a	C C - -	$(Ri) = Rj$	Half word
ORB Rj, @Ri	A	96	1 + 2a	C C - -	$(Ri) = Rj$	Byte
EOR Rj, Ri	A	9A	1	C C - -	$Ri \wedge = Rj$	Word
EOR Rj, @Ri	A	9C	1 + 2a	C C - -	$(Ri) \wedge = Rj$	Word
EORH Rj, @Ri	A	9D	1 + 2a	C C - -	$(Ri) \wedge = Rj$	Half word
EORB Rj, @Ri	A	9E	1 + 2a	C C - -	$(Ri) \wedge = Rj$	Byte

• **Bit manipulation arithmetic instructions (8 instructions)**

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
BANDL #u4, @Ri (u4: 0 to 0FH)	C	80	1 + 2a	--- --	(Ri) & = (F0H + u4)	Manipulate lower 4 bits
BANDH #u4, @Ri (u4: 0 to 0FH)	C	81	1 + 2a	--- --	(Ri) & = ((u4<<4) + 0FH)	Manipulate upper 4 bits
* BAND #u8, @Ri	*1		-	----	(Ri) & = u8	
BORL #u4, @Ri (u4: 0 to 0FH)	C	90	1 + 2a	--- --	(Ri) = u4	Manipulate lower 4 bits
BORH #u4, @Ri (u4: 0 to 0FH)	C	91	1 + 2a	--- --	(Ri) = (u4<<4)	Manipulate upper 4 bits
* BOR #u8, @Ri	*2		-	----	(Ri) = u8	
BEORL #u4, @Ri (u4: 0 to 0FH)	C	98	1 + 2a	--- --	(Ri) ^ = u4	Manipulate lower 4 bits
BEORH #u4, @Ri (u4: 0 to 0FH)	C	99	1 + 2a	--- --	(Ri) ^ = (u4<<4)	Manipulate upper 4 bits
* BEOR #u8, @Ri	*3		-	----	(Ri) ^ = u8	
BTSTL #u4, @Ri (u4: 0 to 0FH)	C	88	2 + a	0 C --	(Ri) & u4	Test lower 4 bits
BTSTH #u4, @Ri (u4: 0 to 0FH)	C	89	2 + a	C C --	(Ri) & (u4<<4)	Test upper 4 bits

*1: Assembler generates BANDL if result of logical operation “u8&0x0F” leaves an active (set) bit and generates BANDH if “u8&0xF0” leaves an active bit. Depending on the value in the “u8” format, both BANDL and BANDH may be generated.

*2: Assembler generates BORL if result of logical operation “u8&0x0F” leaves an active (set) bit and generates BORH if “u8&0xF0” leaves an active bit.

*3: Assembler generates BEORL if result of logical operation “u8&0x0F” leaves an active (set) bit and generates BEORH if “u8&0xF0” leaves an active bit.

• **Add/subtract operation instructions (10 instructions)**

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
MUL Rj, Ri	A	AF	5	C C C -	Rj × Ri → MDH, MDL	32-bit × 32-bit = 64-bit
MULU Rj, Ri	A	AB	5	C C C -	Rj × Ri → MDH, MDL	Unsigned
MULH Rj, Ri	A	BF	3	C C --	Rj × Ri → MDL	16-bit × 16-bit = 32-bit
MULUH Rj, Ri	A	BB	3	C C --	Rj × Ri → MDL	Unsigned
DIVOS Ri	E	97 - 4	1	----		Step calculation
DIVOU Ri	E	97 - 5	1	----		32-bit/32-bit = 32-bit
DIV1 Ri	E	97 - 6	d	- C - C		
DIV2 Ri	E	97 - 7	1	- C - C		
DIV3 Ri	E	9F - 6	1	----		
DIV4S Ri	E	9F - 7	1	----		
* DIV Ri	*1		-	- C - C	MDL/Ri → MDL, MDL%Ri → MDH	
* DIVU Ri	*2		-	- C - C	MDL/Ri → MDL, MDL%Ri → MDH	Unsigned

*1: DIVOS, DIV1 × 32, DIV2, DIV3 and DIV4S are generated. A total instruction code length of 72 bytes.

*2: DIVOU and DIV1 × 32 are generated. A total instruction code length of 66 bytes.

MB91101/MB91101A

• Shift arithmetic instructions (9 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
LSL Rj, Ri	A	B6	1	C C - C	$Ri \ll Rj \rightarrow Ri$	Logical shift
* LSL #u5, Ri	C'	B4	1	C C - C	$Ri \ll u5 \rightarrow Ri$	
LSL #u4, Ri	C	B4	1	C C - C	$Ri \ll u4 \rightarrow Ri$	
LSL2 #u4, Ri	C	B5	1	C C - C	$Ri \ll (u4 + 16) \rightarrow Ri$	
LSR Rj, Ri	A	B2	1	C C - C	$Ri \gg Rj \rightarrow Ri$	Logical shift
* LSR #u5, Ri	C'	B0	1	C C - C	$Ri \gg u5 \rightarrow Ri$	
LSR #u4, Ri	C	B0	1	C C - C	$Ri \gg u4 \rightarrow Ri$	
LSR2 #u4, Ri	C	B1	1	C C - C	$Ri \gg (u4 + 16) \rightarrow Ri$	
ASR Rj, Ri	A	BA	1	C C - C	$Ri \gg Rj \rightarrow Ri$	Logical shift
* ASR #u5, Ri	C'	B8	1	C C - C	$Ri \gg u5 \rightarrow Ri$	
ASR #u4, Ri	C	B8	1	C C - C	$Ri \gg u4 \rightarrow Ri$	
ASR2 #u4, Ri	C	B9	1	C C - C	$Ri \gg (u4 + 16) \rightarrow Ri$	

• Immediate value data transfer instruction (immediate value set/16-bit/32-bit immediate value transfer instruction) (3 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
LDI: 32 #i32, Ri	E	9F - 8	3	- - - -	$i32 \rightarrow Ri$	Upper 12 bits are zero-extended Upper 24 bits are zero-extended
LDI: 20 #i20, Ri	C	9B	2	- - - -	$i20 \rightarrow Ri$	
LDI: 8 #i8, Ri	B	C0	1	- - - -	$i8 \rightarrow Ri$	
* LDI # {i8 i20 i32}, Ri					{i8 i20 i32} $\rightarrow Ri$	

*1: If an immediate value is given in absolute, assembler automatically makes i8, i20 or i32 selection.
If an immediate value contains relative value or external reference, assembler selects i32.

• Memory load instructions (13 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
LD @Rj, Ri	A	04	b	- - - -	$(Rj) \rightarrow Ri$	Rs: Special-purpose register
LD @(R13, Rj), Ri	A	00	b	- - - -	$(R13 + Rj) \rightarrow Ri$	
LD @(R14, disp10), Ri	B	20	b	- - - -	$(R14 + disp10) \rightarrow Ri$	
LD @(R15, udisp6), Ri	C	03	b	- - - -	$(R15 + udisp6) \rightarrow Ri$	
LD @R15 +, Ri	E	07 - 0	b	- - - -	$(R15) \rightarrow Ri, R15 + = 4$	
LD @R15 +, Rs	E	07 - 8	b	- - - -	$(R15) \rightarrow Rs, R15 + = 4$	
LD @R15 +, PS	E	07 - 9	1 + a + b	C C C C	$(R15) \rightarrow PS, R15 + = 4$	
LDUH @Rj, Ri	A	05	b	- - - -	$(Rj) \rightarrow Ri$	Zero-extension
LDUH @(R13, Rj), Ri	A	01	b	- - - -	$(R13 + Rj) \rightarrow Ri$	Zero-extension
LDUH @(R14, disp9), Ri	B	40	b	- - - -	$(R14 + disp9) \rightarrow Ri$	Zero-extension
LDUB @Rj, Ri	A	06	b	- - - -	$(Rj) \rightarrow Ri$	Zero-extension
LDUB @(R13, Rj), Ri	A	02	b	- - - -	$(R13 + Rj) \rightarrow Ri$	Zero-extension
LDUB @(R14, disp8), Ri	B	60	b	- - - -	$(R14 + disp8) \rightarrow Ri$	Zero-extension

Note: The relations between o8 field of TYPE-B and u4 field of TYPE-C in the instruction format and assembler description from disp8 to disp10 are as follows:

disp8 \rightarrow o8 = disp8	} Each disp is a code extension.
disp9 \rightarrow o8 = disp9 >> 1	
disp10 \rightarrow o8 = disp10 >> 2	
udisp6 \rightarrow u4 = udisp6 >> 2	

udisp4 is a 0 extension.

• Memory store instructions (13 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
ST Ri, @Rj	A	14	a	----	Ri → (Rj)	Word
ST Ri, @(R13, Rj)	A	10	a	----	Ri → (R13 + Rj)	Word
ST Ri, @(R14, disp10)	B	30	a	----	Ri → (R14 + disp10)	Word
ST Ri, @(R15, udisp6)	C	13	a	----	Ri → (R15 + usidp6)	
ST Ri, @-R15	E	17-0	a	----	R15 -= 4, Ri → (R15)	Rs: Special-purpose register
ST Rs, @-R15	E	17-8	a	----	R15 -= 4, Rs → (R15)	
ST PS, @-R15	E	17-9	a	----	R15 -= 4, PS → (R15)	
STH Ri, @Rj	A	15	a	----	Ri → (Rj)	Half word
STH Ri, @(R13, Rj)	A	11	a	----	Ri → (R13 + Rj)	Half word
STH Ri, @(R14, disp9)	B	50	a	----	Ri → (R14 + disp9)	Half word
STB Ri, @Rj	A	16	a	----	Ri → (Rj)	Byte
STB Ri, @(R13, Rj)	A	12	a	----	Ri → (R13 + Rj)	Byte
STB Ri, @(R14, disp8)	B	70	a	----	Ri → (R14 + disp8)	Byte

Note: The relations between o8 field of TYPE-B and u4 field of TYPE-C in the instruction format and assembler description from disp8 to disp10 are as follows:

disp8 → o8 = disp8	}	Each disp is a code extension.
disp9 → o8 = disp9>>1		
disp10 → o8 = disp10>>2		
udisp6 → u4 = udisp6>>2		

udisp4 is a 0 extension.

• Transfer instructions between registers/special-purpose registers transfer instructions (5 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
MOV Rj, Ri	A	8B	1	----	Rj → Ri	Transfer between general-purpose registers
MOV Rs, Ri	A	B7	1	----	Rs → Ri	Rs: Special-purpose register
MOV Ri, Rs	A	B3	1	----	Ri → Rs	Rs: Special-purpose register
MOV PS, Ri	E	17-1	1	----	PS → Ri	
MOV Ri, PS	E	07-1	c	CCCC	Ri → PS	

MB91101/MB91101A

• Non-delay normal branch instructions (23 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
JMP @Ri	E	97 - 0	2	- - - -	Ri → PC	
CALL label12	F	D0	2	- - - -	PC + 2 → RP, PC + 2 + rel11 × 2 → PC	
CALL @Ri	E	97 - 1	2	- - - -	PC + 2 → RP, Ri → PC	
RET	E	97 - 2	2	- - - -	RP → PC	Return
INT #u8	D	1F	3+3a	- - - -	SSP - = 4, PS → (SSP), SSP - = 4, PC + 2 → (SSP), 0 → I flag, 0 → S flag, (TBR + 3FC - u8 × 4) → PC	
INTE	E	9F - 3	3 + 3a	- - - -	SSP - = 4, PS → (SSP), SSP - = 4, PC + 2 → (SSP), 0 → S flag, (TBR + 3D8 - u8 × 4) → PC	For emulator
RETI	E	97 - 3	2 + 2a	C C C C	(R15) → PC, R15 - = 4, (R15) → PS, R15 - = 4	
BNO label9	D	E1	1	- - - -	Non-branch	
BRA label9	D	E0	2	- - - -	PC + 2 + rel8 × 2 → PC	
BEQ label9	D	E2	2/1	- - - -	PCif Z = = 1	
BNE label9	D	E3	2/1	- - - -	PCif Z = = 0	
BC label9	D	E4	2/1	- - - -	PCif C = = 1	
BNC label9	D	E5	2/1	- - - -	PCif C = = 0	
BN label9	D	E6	2/1	- - - -	PCif N = = 1	
BP label9	D	E7	2/1	- - - -	PCif N = = 0	
BV label9	D	E8	2/1	- - - -	PCif V = = 1	
BNV label9	D	E9	2/1	- - - -	PCif V = = 0	
BLT label9	D	EA	2/1	- - - -	PCif V xor N = = 1	
BGE label9	D	EB	2/1	- - - -	PCif V xor N = = 0	
BLE label9	D	EC	2/1	- - - -	PCif (V xor N) or Z = = 1	
BGT label9	D	ED	2/1	- - - -	PCif (V xor N) or Z = = 0	
BLS label9	D	EE	2/1	- - - -	PCif C or Z = = 1	
BHI label9	D	EF	2/1	- - - -	PCif C or Z = = 0	

- Notes:
- “2/1” in cycle sections indicates that 2 cycles are needed for branch and 1 cycle needed for non-branch.
 - The relations between rel8 field of TYPE-D and rel11 field of TYPE-F in the instruction format and assembler discription label9 and label12 are as follows.
 $label9 \rightarrow rel8 = (label9 - PC - 2)/2$
 $label12 \rightarrow rel11 = (label12 - PC - 2)/2$
 - RETI must be operated while S flag = 0.

• Branch instructions with delays (20 instructions)

Mnemonic	Type	OP	Cycle	N	Z	V	C	Operation	Remarks
JMP:D @Ri	E	9F-0	1	-	-	-	-	Ri → PC	
CALL:D label12	F	D8	1	-	-	-	-	PC + 4 → RP, PC + 2 + rel11 × 2 → PC

BGE:D label9	D	FB	1	-	-	-	-	PCif V xor N == 0	
BLE:D label9	D	FC	1	-	-	-	-	PCif (V xor N) or Z == 1	
BGT:D label9	D	FD	1	-	-	-	-	PCif (V xor N) or Z == 0	
BLS:D label9	D	FE	1	-	-	-	-	PCif C or Z == 1	
BHI:D label9	D	FF	1	-	-	-	-	PCif C or Z == 0	

- Notes:
- The relations between rel8 field of TYPE-D and rel11 field of TYPE-F in the instruction format and assembler discription label9 and label12 are as follows.
 $label9 \rightarrow rel8 = (label9 - PC - 2)/2$
 $label12 \rightarrow rel11 = (label12 - PC - 2)/2$
 - Delayed branch operation always executes next instruction (delay slot) before making a branch.
 - Instructions allowed to be stored in the delay slot must meet one of the following conditions. If the other instruction is stored, this device may operate other operation than defined.
 - The instruction described "1" in the other cycle column than branch instruction.
 - The instruction described "a", "b", "c" or "d" in the cycle column.

DMOV @R15+, @dir10	D	1B	2a	----	(R15) → (dir10), R15 += 4	Word
DMOVH @dir9, R13	D	09	b	----	(dir9) → R13	Half word
DMOVH R13, @dir9	D	19	a	----	R13 → (dir9)	Half word
DMOVH @dir9, @R13+	D	0D	2a	----	(dir9) → (R13), R13 += 2	Half word
DMOVH @R13+, @dir9	D	1D	2a	----	(R13) → (dir9), R13 += 2	Half word
DMOV B @dir8, R13	D	0A	b	----	(dir8) → R13	Byte
DMOV B R13, @dir8	D	1A	a	----	R13 → (dir8)	Byte
DMOV B @dir8, @R13+	D	0E	2a	----	(dir8) → (R13), R13 ++	Byte
DMOV B @R13+, @dir8	D	1E	2a	----	(R13) → (dir8), R13 ++	Byte

Note: The relations between the dir field of TYPE-D in the instruction format and the assembler description from disp8 to disp10 are as follows:

disp8 → dir + disp8	} Each disp is a code extension
disp9 → dir = disp9>>1	
disp10 → dir = disp10>>2	

• Resource instructions (2 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
LDRES @Ri+, #u4	C	BC	a	----	(Ri) → u4 resource Ri += 4	u4: Channel number
STRES #u4, @Ri+	C	BD	a	----	u4 resource → (Ri) Ri += 4	u4: Channel number

• Co-processor instructions (4 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
COPOP #u4, #CC, CRj, CRi	E	9F - C	2 + a	----	Calculation	No error traps
COPLD #u4, #CC, Rj, CRi	E	9F - D	1 + 2a	----	Rj → CRi	
COPST #u4, #CC, CRj, Ri	E	9F - E	1 + 2a	----	CRj → Ri	
COPSV #u4, #CC, CRj, Ri	E	9F - F	1 + 2a	----	CRj → Ri	

• Other instructions (16 instructions)

Mnemonic	Type	OP	Cycle	N Z V C	Operation	Remarks
NOP	E	9F – A	1	– – – –	No changes	
ANDCCR #u8	D	83	c	C C C C	CCR and u8 → CCR	
ORCCR #u8	D	93	c	C C C C	CCR or u8 → CCR	
STILM #u8	D	87	1	– – – –	i8 → ILM	Set ILM immediate value
ADDSP #s10	*1 D	A3	1	– – – –	R15 += s10	ADD SP instruction
EXTSB Ri	E	97 – 8	1	– – – –	Sign extension 8 → 32 bits	
EXTUB Ri	E	97 – 9	1	– – – –	Zero extension 8 → 32 bits	
EXTSH Ri	E	97 – A	1	– – – –	Sign extension 16 → 32 bits	
EXTUH Ri	E	97 – B	1	– – – –	Zero extension 16 → 32 bits	
LDM0 (reglist)	D	8C	*4	– – – –	(R15) → reglist, R15 increment	Load-multi R0 to R7
LDM1 (reglist)	D	8D	*4	– – – –	(R15) → reglist, R15 increment	Load-multi R8 to R15
* LDM (reglist)	*3		–	– – – –	(R15 + +) → reglist,	Load-multi R0 to R15
STM0 (reglist)	D	8E	*6	– – – –	R15 decrement, reglist → (R15)	Store-multi R0 to R7
STM1 (reglist)	D	8F	*6	– – – –	R15 decrement, reglist → (R15)	Store-multi R8 to R15
* STM2 (reglist)	*5		–	– – – –	reglist → (R15 + +)	Store-multi R0 to R15
ENTER #u10	*2 D	0F	1+a	– – – –	R14 → (R15 – 4), R15 – 4 → R14, R15 – u10 → R15	Entrance processing of function
LEAVE	E	9F – 9	b	– – – –	R14 + 4 → R15, (R15 – 4) → R14	Exit processing of function
XCHB @Rj, Ri	A	8A	2a	– – – –	Ri → TEMP, (Rj) → Ri, TEMP → (Rj)	For SEMAFO management Byte data

- *1: In the ADDSP instruction, the reference between u8 of TYPE-D in the instruction format and assembler description s10 is as follows.
s10 → s8 = s10>>2
- *2: In the ENTER instruction, the reference between i8 of TYPE-C in the instruction format and assembler description u10 is as follows.
u10 → u8 = u10>>2
- *3: If either of R0 to R7 is specified in reglist, assembler generates LDM0. If either of R8 to R15 is specified, assembler generates LDM1. Both LDM0 and LDM1 may be generated.
- *4: The number of cycles needed for execution of LDM0 (reglist) and LDM1 (reglist) is given by the following calculation; $a \times (n - 1) + b + 1$ when “n” is number of registers specified.
- *5: If either of R0 to R7 is specified in reglist, assembler generates STM0. If either of R8 to R15 is specified, assembler generates STM1. Both STM0 and STM1 may be generated.
- *6: The number of cycles needed for execution of STM0 (reglist) and STM1 (reglist) is given by the following calculation; $a \times n + 1$ when “n” is number of registers specified.

© FUJITSU LIMITED Printed in Japan

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document are presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

CAUTION:

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
