

32-bit Proprietary Microcontroller

CMOS

FR60Lite MB91260B Series

MB91263B/MB91F264B

■ DESCRIPTION

The MB91260B series is a 32-bit RISC microcontroller designed by Fujitsu for embedded control applications which require high-speed processing.

The CPU is used the FR family and the compatibility of FR60Lite.

■ FEATURES

- FR60Lite CPU
 - 32-bit RISC, load/store architecture with a five-stage pipeline
 - Maximum operating frequency : 33 MHz (oscillation frequency 4.192 MHz, oscillation frequency 8-multiplier (PLL clock multiplication method))
 - 16-bit fixed length instructions (basic instructions)
 - Execution speed of instructions : 1 instruction per cycle
 - Memory-to-memory transfer, bit handling, barrel shift instructions, etc : Instructions suitable for embedded applications
 - Function entry/exit instructions, multiple-register load/store instructions : Instructions adapted for C-language

(Continued)

■ PACKAGES

100-pin plastic QFP

(FTP-100P-M06)

100-pin plastic LQFP

(FTP-100P-M05)

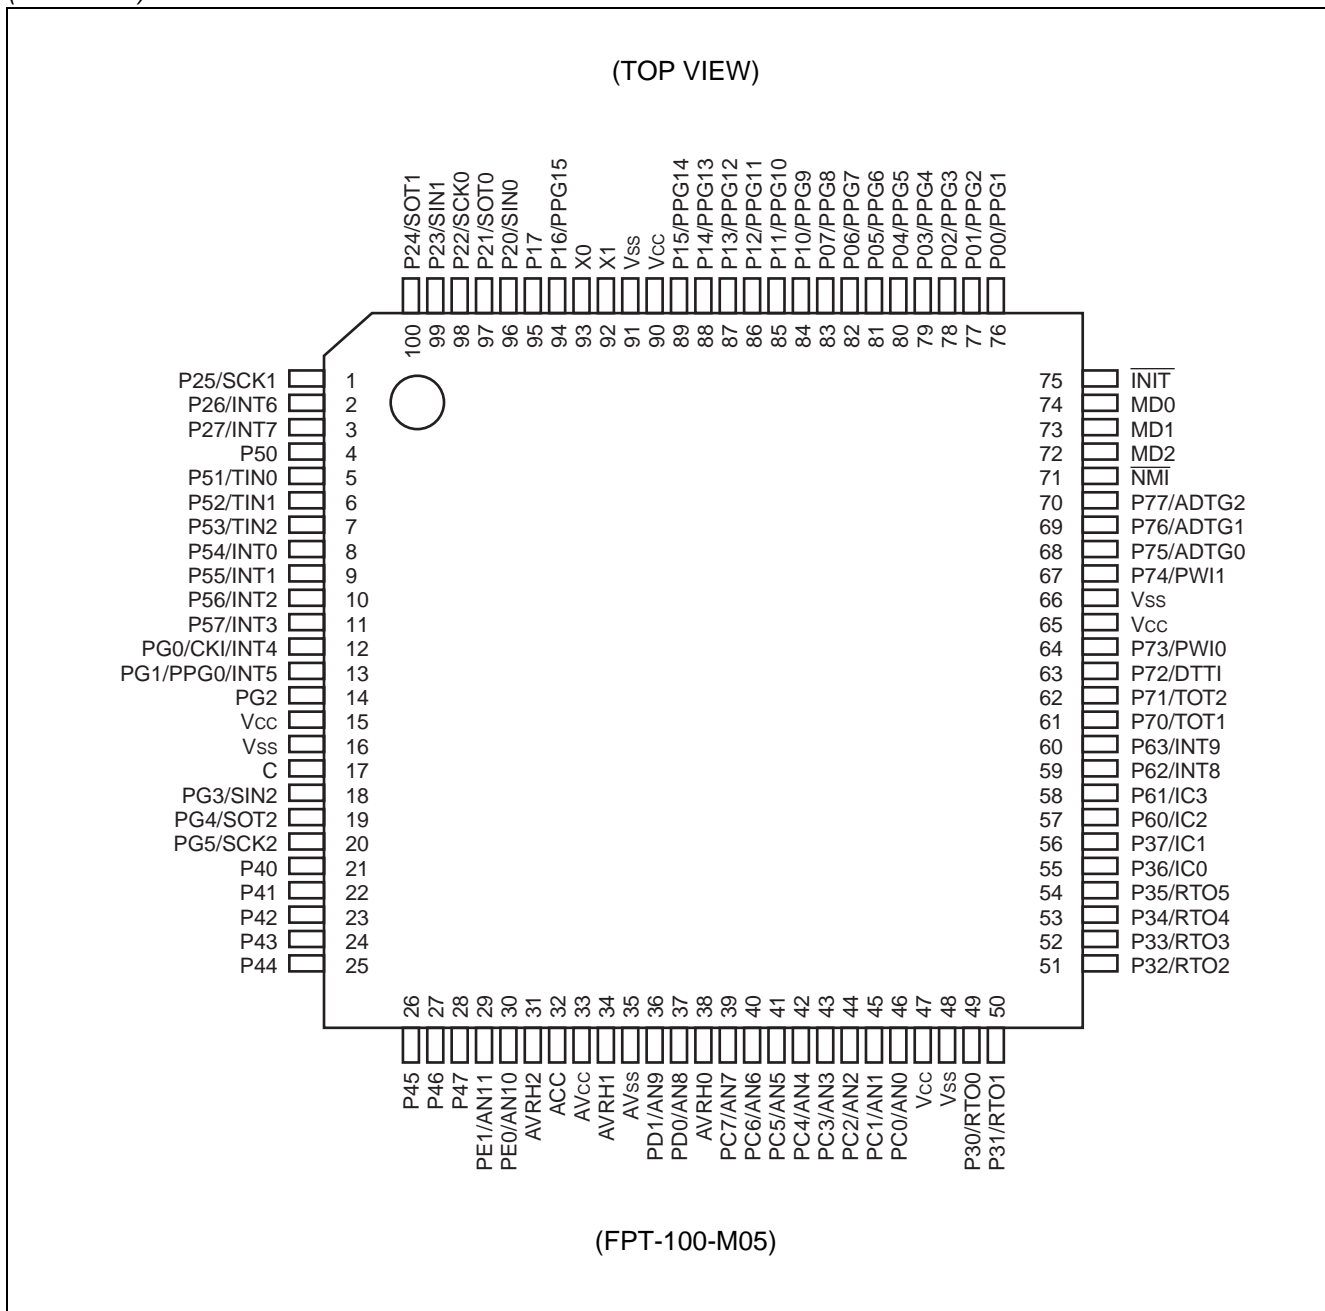

MB91260B Series

(Continued)

- Register interlock function : Facilitates coding in assembler.
- Built-in multiplier with instruction-level support
 - 32 bit multiplication with sign : 5 cycles
 - 16 bit multiplication with sign : 3 cycles
- Interrupt (PC, PS save) : 6 cycles, 16 priority levels
- Harvard architecture allowing program access and data access to be executed simultaneously
- FR family instruction compatible
- Internal peripheral functions
 - Capacity of internal ROM and ROM type
 - MASK ROM : 128 KB (MB91263B)
 - FLASH ROM : 256 KB (MB91F264B)
 - Capacity of internal RAM : 8 KB
 - A/D converter (sequential comparison type)
 - Resolution : 10 bits : 2 ch × 2 units, 8 ch × 1 unit
 - Conversion time : 1.2 μs (Minimum conversion time system clock at 33 MHz)
1.35 μs (Minimum conversion time system clock at 20 MHz)
 - External interrupt input : 10 ch
 - Bit search module (for REALOS)
 - Function for searching the MSB in each word for the first 1-to-0 inverted bit position
 - UART (Full-duplex double buffer) : 3 ch
 - Selectable parity On/Off
 - Asynchronous (start-stop synchronized) or clock-synchronous communications selectable
 - Internal timer for dedicated baud rate (U-Timer) on each channel
 - External clock can be used as transfer clock
 - Error detection function for parity, frame and overrun errors
 - 8/16-bit PPG timer : 16 ch (at 8-bit) / 8 ch (at 16-bit)
 - Reload timer : 3 ch (with cascade mode, without output of reload timer 0)
 - Free-run timer : 1 ch
 - PWC timer : 2 ch
 - Input capture : 4 ch (interface with free-run timer)
 - Output compare : 6 ch (interface with free-run timer)
 - Waveform generator
 - Various waveforms which are generated by using output compare, 16-bit PPG timer 0 and 16-bit dead timer
 - SUM of products macro (simple DSP)
 - RAM : instruction RAM 256 × 16-bit
 - XRAM 64 × 16-bit
 - YRAM 64 × 16-bit
 - Execution of 1 cycle product addition (16-bit × 16-bit + 40 bits)
 - Operation results are extracted rounded from 40 to 16 bits
 - DMAC (DMA Controller) : 5 ch
 - Operation of transfer and activation by internal peripheral interrupts and software
 - Watchdog timer
 - Low Power Consumption Mode
 - Sleep/stop function
 - Package : QFP-100, LQFP-100
 - Technology : CMOS 0.35 μm
 - Power supply : 1-power supply [V_{cc} = 4.0 V to 5.5 V]

MB91260B Series

■ PIN DESCRIPTION

Pin no.		Pin name	Circuit type	Description
QFP	LQFP			
1	99	SIN1	D	UART1 data input terminal. When use the terminal as data input of UART1, set the corresponding data direction resister (DDR) to input.
		P23		General purpose input/output port. This function is always valid.
2	100	SOT1	D	UART1 data output terminal. This function becomes valid when data output of UART1 is set to enabled.
		P24		General purpose input/output port. This function becomes valid when data output of UART1 is set to disabled.
3	1	SCK1	D	UART1 clock input/output terminal. This function becomes valid when clock input/output is set to enabled.
		P25		General purpose input/output port. This function becomes valid when clock input/output is set to disabled.
4	2	INT6	E	External interrupt input terminal. When use the terminal as external interrupt input, set the corresponding data direction resister (DDR) to input.
		P26		General purpose input/output port. This function is always valid.
5	3	INT7	E	External interrupt input terminal. When use the terminal as external interrupt input, set the corresponding data direction resister (DDR) to input.
		P27		General purpose input/output port. This function is always valid.
6	4	P50	C	General purpose input/output port.
7	5	TIN0	C	External trigger input terminal of reload timer 0. When use the terminal as trigger input, set the corresponding data direction resister (DDR) to input.
		P51		General purpose input/output port. This function is always valid.
8	6	TIN1	C	External trigger input terminal of reload timer 1. When use the terminal as external trigger input, set the corresponding data direction resister (DDR) to input.
		P52		General purpose input/output port. This function is always valid.

Pin no.		Pin name	Circuit type	Description
QFP	LQFP			
9	7	TIN2	C	External trigger input terminal of reload timer 2. When use the terminal as external trigger input, set the corresponding data direction resistor (DDR) to input.
		P53		General purpose input/output port. This function is always valid.
10	8	INT0	E	External interrupt input terminal. When use the terminal as external interrupt input, set the corresponding data direction resistor (DDR) to input.
		P54		General purpose input/output port. This function is always valid.
11	9	INT1	E	External interrupt input terminal. When use the terminal as external interrupt input, set the corresponding data direction resistor (DDR) to input.
		P55		General purpose input/output port. This function is always valid.
12	10	INT2	E	External interrupt input terminal. When use the terminal as external interrupt input, set the corresponding data direction resistor (DDR) to input.
		P56		General purpose input/output port. This function is always valid.
13	11	INT3	E	External interrupt input terminal. When use the terminal as external interrupt input, set the corresponding data direction resistor (DDR) to input.
		P57		General purpose input/output port. This function is always valid.
14	12	CKI	E	External clock input terminal for free-run timer. When use the terminal as external clock input of free-run timer, set the corresponding data direction resistor (DDR) to input.
		INT4		External interrupt input terminal. When use the terminal as external interrupt input, set the corresponding data direction resistor (DDR) to input.
		PG0		General purpose input/output port. This function is always valid.

Pin no.		Pin name	Circuit type	Description
QFP	LQFP			
15	13	PPG0	E	Output terminal of PPG timer 0. This function becomes valid when output of PPG timer 0 is set to enabled.
		INT5		External interrupt input terminal. When use the terminal as external input, output of PPG timer 0 is set to disabled, and set the corresponding data direction resistor (DDR) to input.
		PG1		General purpose input/output port. This function becomes valid when output of PPG timer 0 is set to disabled.
16	14	PG2	C	General purpose input/output port.
20	18	SIN2	D	UART2 data input terminal. When use the terminal as data input of UART2, set the corresponding data direction resistor (DDR) to input.
		PG3		General purpose input/output port. This function is always valid.
21	19	SOT2	D	UART2 data output terminal. This function becomes valid when data output of UART2 is set to enabled.
		PG4		General purpose input/output port. This function becomes valid when data output of UART2 is set to disabled.
22	20	SCK2	D	UART2 clock input/output terminal. This function becomes valid when clock input/output of UART2 is set to enabled.
		PG5		General purpose input/output port. This function becomes valid when clock input/output of UART2 is set to disabled.
23	21	P40	C	General purpose input/output port.
24	22	P41	C	General purpose input/output port.
25	23	P42	C	General purpose input/output port.
26	24	P43	C	General purpose input/output port.
27	25	P44	C	General purpose input/output port.
28	26	P45	C	General purpose input/output port.
29	27	P46	C	General purpose input/output port.
30	28	P47	C	General purpose input/output port.
31	29	AN11	G	Analog input terminal of A/D converter. This function becomes valid when set the corresponding AICR2 resistor to analog input.
		PE1		General purpose input/output port. This function becomes valid when set the corresponding AICR2 resistor to port.

■ HANDLING DEVICES

- Preventing Latchup

Latch-up may occur in a CMOS IC if a voltage greater than V_{CC} or less than V_{SS} is applied to an input or output pin or if an above-rating voltage is applied between V_{CC} and V_{SS} .

A latchup, if it occurs, significantly increases the power supply current and may cause thermal destruction of an element. When you use a CMOS IC, be very careful not to exceed the maximum rating.

- Treatment of Unused Input Pins

Do not leave an unused input pin open, since it may cause a malfunction. Handle by, for example, using a pull-up or pull-down resistor.

- About power supply pins

In products with multiple V_{CC} or V_{SS} pins, the pins of the same potential are internally connected in the device to avoid abnormal operations including latch-up. However you must connect the pins to external a same potential power supply and a ground line to lower the electro-magnetic emission level to prevent abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total current rating.

The power pins should be connected to V_{CC} and V_{SS} of this device at the lowest possible impedance from the current supply source.

It is also advisable to connect a ceramic bypass capacitor of approximately 0.1 μF between V_{CC} and V_{SS} near this device.

- About Crystal oscillator circuit

Noise near the X0 and X1 pin may cause the device to malfunction.

Design the circuit board so that X0 and X1, the crystal oscillator (or ceramic oscillator), and the bypass capacitor to ground are located as close to the device as possible.

It is strongly recommended to design the PC board artwork with the X0 and X1 pins surrounded by ground plane because stable operation can be expected with such a layout.

- Mode pins (MD0 to MD2)

These pins should be connected directly to V_{CC} or V_{SS} .

To prevent the device erroneously switching to test mode due to noise, design the printed circuit board such that the distance between the mode pins and V_{CC} or V_{SS} is as short as possible and the connection impedance is low.

- Operation at start-up

Be sure to execute setting initialized reset (INIT) with $\overline{\text{INIT}}$ pin immediately after start-up.

Also, in order to provide a delay while the oscillator circuit stabilize immediately after start-up, maintain the "L" level input to the $\overline{\text{INIT}}$ pin for the required stabilization wait time.

(For INIT via the $\overline{\text{INIT}}$ pin, the oscillation stabilization wait time setting is initialized to the minimum value.)

- About oscillation input at power on

When turning the power on, maintain clock input until the device is released from the oscillation stabilization wait state.

MB91260B Series

- Caution operation during PLL clock mode

Even if the oscillator comes off or the clock input stops with the PLL clock selected for this device, the device may continue to operate at the free-run frequency of the PLL's internal self-oscillating oscillator circuit.

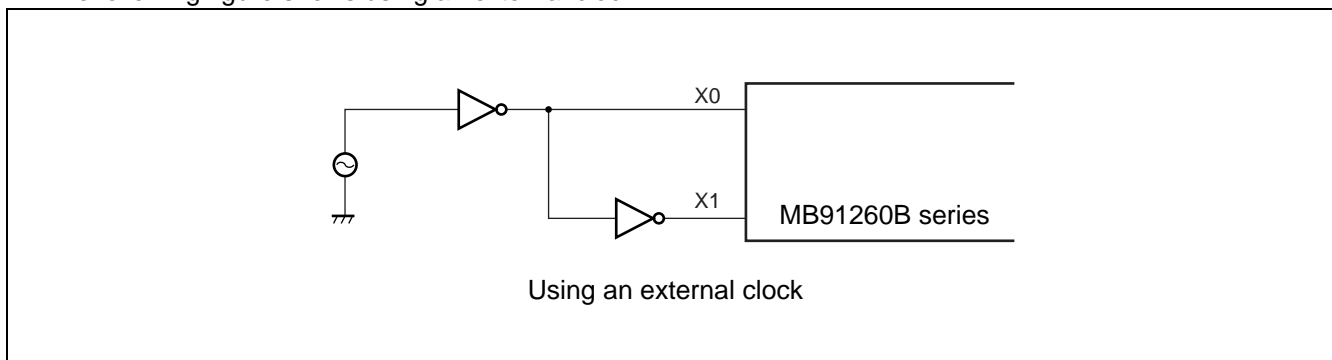

Performance of this operation, however, cannot be guaranteed.

- External clock

When external clock is selected, the opposite phase clock to X0 pin must be supplied to X1 pin simultaneously.

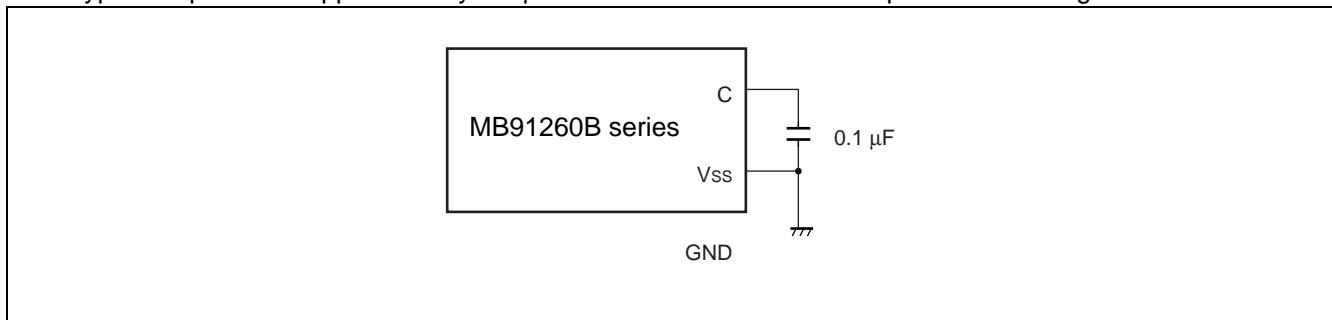

If the STOP mode (oscillation stop mode) is used simultaneously, the X1 pin is stopped with the "H" output. So, when STOP mode is specified, approximately 1 k Ω of resistance should be added externally to avoid the conflict of output.

The following figure shows using an external clock.

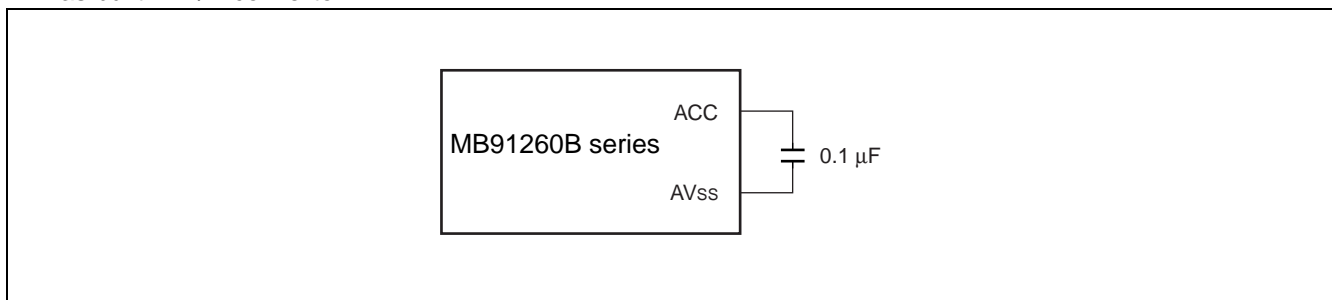

- C pin

A bypass capacitor of approximately 0.1 μ F should be connected the C pin for built-in regulator.

- ACC pin

A capacitor of approximately 0.1 μ F should be inserted between the ACC pin and the AVcc pin as this product has built-in A/D convertor.

MB91260B Series

- Clock control block

Take the oscillation stabilization wait time during Low level input to the $\overline{\text{INIT}}$ pin.

- Switch shared port function

To switch between the use as a port and the use as a dedicated pin, use the port function register (PFR).

- Low Power Consumption Mode

(1) To enter the standby mode, use the synchronous standby mode (set with the SYNCS bit as bit 8 in the TBCR: or time-base counter control register) and be sure to use the following sequence

(LDI	#value_of_standby, R0)	: Value_of_standby is write data to STCR.
(LDI	#_STCR, R12)	: _STCR is address (481H) of STCR.
STB	R0, @R12	: Writing to standby control register (STCR)
LDUB	@R12, R0	: STCR read for synchronous standby
LDUB	@R12, R0	: Dummy re-read of STCR
NOP		: NOP × 5 for arrangement of timing
NOP		
NOP		
NOP		
NOP		

In addition, please set I flag, ILM, and ICR to diverge to the interruption handler that is the return factor after the standby returns.

(2) Please do not do the following when the monitor debugger is used.

- Break point setting for above instruction lines
- Step execution for above instruction lines

- Notes on the PS register

As the PS register is processed by some instructions in advance, exception handling below may cause the interrupt handling routine to break when the debugger is used or the display contents of flags in the PS register to be updated.

As the microcontroller is designed to carry out reprocessing correctly upon returning from such an EIT event, it performs operations before and after the EIT as specified in either case.

1. The following operations are performed when the instruction followed by a DIV0U/DIV0S instruction results in: (a) acceptance of a user interrupt or NMI, (b) step execution, or (c) a break at a data event or emulator menu.

- (1) The D0 and D1 flags are updated in advance.
- (2) An EIT handling routine (user interrupt, NMI, or emulator) is executed.
- (3) Upon returning from the EIT, the DIV0U/DIV0S instruction is executed and the D0 and D1 flags are updated to the same values as in (1).

2. The following operations are performed when the ORCCR/STILM/MOVRi and PS instructions are executed to enable interruptions when a user interrupt or NMI trigger even has occurred.

- (1) The PS register is updated in advance.
- (2) An EIT handling routine (user interrupt, NMI) is executed.
- (3) Upon returning from the EIT, the above instructions are executed and the PS register is updated to the same value as in (1).

- Watch dog timer

The watchdog timer built in this model monitors a program that it defers a reset within a certain period of time. The watchdog timer resets the CPU if the program runs out of controls, preventing the reset defer function from being executed. Once the function of the watchdog timer is enabled, therefore, the watchdog timer keeps on operating programs until it resets the CPU.

As an exception, the watchdog timer defers a reset timing automatically under the condition in which the CPU stops program execution.

MB91260B Series

■ NOTE ON DEBUGGER

- Step execution of RETI command

If an interrupt occurs frequently during step execution, the corresponding interrupt handling routine is executed repeatedly after step execution.

This will prevent the main routine and low-interrupt-level programs from being executed.

Do not execute step of RETI instruction for escape.

Disable the corresponding interrupt and execute debugger when the corresponding interrupt handling routine no longer needs debugging.

- Operand break

Do not apply a data event break to access to the area containing the address of a system stack pointer.

- Execution in an unused area of FLASH memory

Accidentally executing an instruction in an unused area of FLASH memory (with data placed at 0XFFFF) prevents breaks from being accepted.

To prevent this, the code event address mask function of the debugger should be used to cause a break when accessing an instruction in an unused area.

- Power-on debugging

All of the following three conditions must be satisfied when the power supply is turned off by power-on debugging.

(1) The time for the user power to fall from 0.9 VCC to 0.5 VCC is 25 μ s or longer.

Note : In a dual-power system, VCC indicates the external I/O power supply voltage.

(2) CPU operating frequency must be higher than 1 MHz.

(3) During execution of user program

- Interrupt handler for NMI request (tool)

Add the following program to the interrupt handler to prevent the device from malfunctioning in case the factor flag to be set only in response to a break request from the ICE is set, for example, by an adverse effect of noise to the DSU pin while the ICE is not connected. Enable to use the ICE while adding this program.

Additional location

Next interrupt handler

Interrupt source	:	NMI request (tool)
Interrupt number	:	#13 (decimal) , 0D _H (hexa decimal)
Offset	:	3C8 _H
Address TBR is default	:	000FFFC8 _H

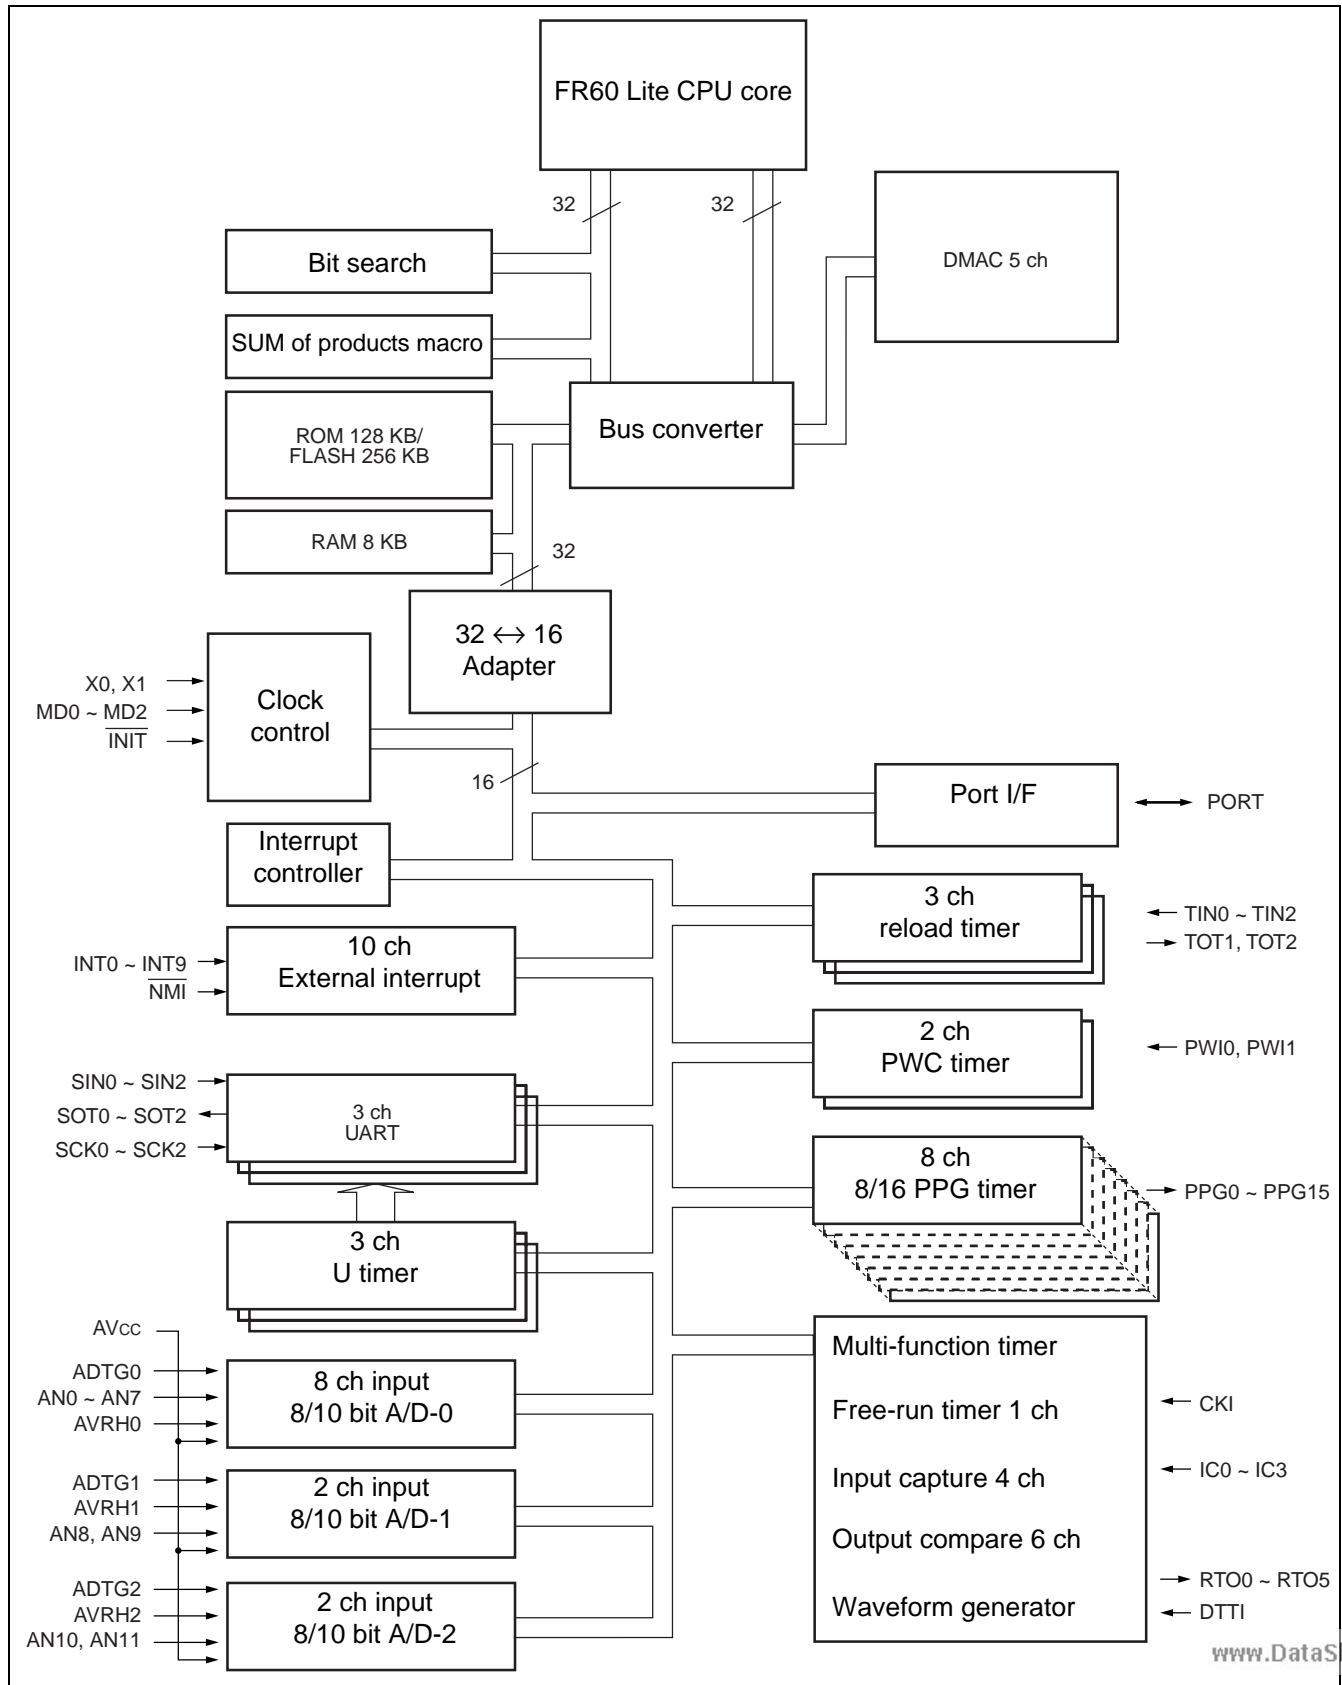

Additional program

```

STM    (R0, R1)
LDI    #B00H, R0;    : B00H is the address of DSU break factor register.
LDI    #0, R1
STB    R1, @R0      : Clear the break factor register.
LDM    (R0, R1)
RETI

```

■ BLOCK DIAGRAM

MB91260B Series

■ MEMORY SPACE

1. Memory space

The FR family has 4 Gbytes of logical address space (2^{32} addresses) available to the CPU by linear access.

- Direct Addressing Areas

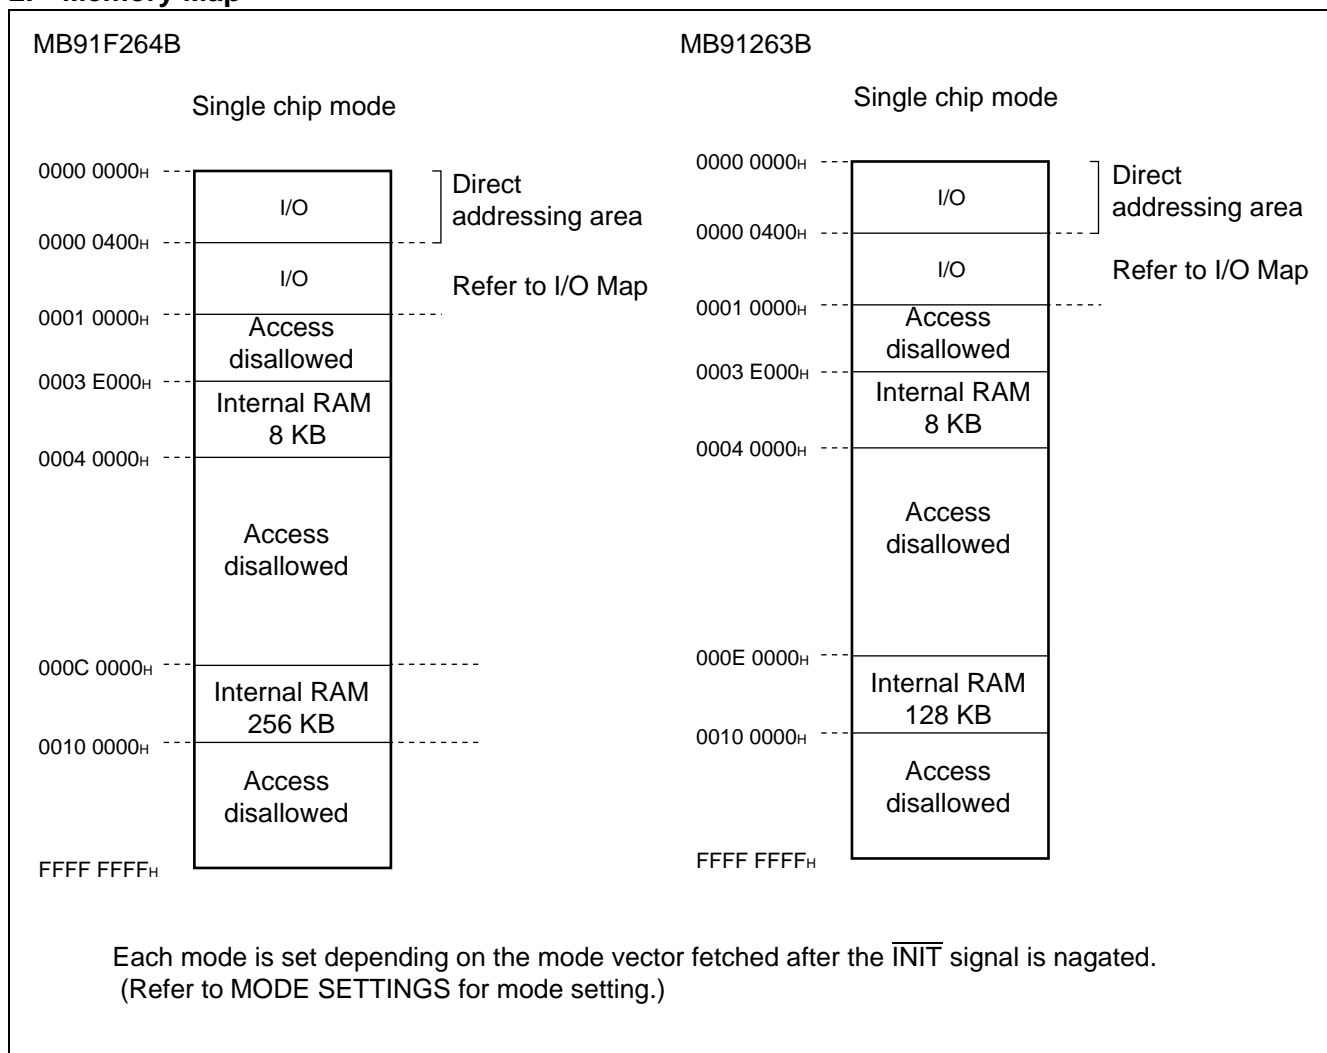

The following address space areas are used as I/O areas.

These areas are called direct addressing areas, in which the address of an operand can be specified directly during an instruction.

The size of directly addressable areas depends on the data size to be being accessed as follows.

- byte data access : 000-0FF_H
- half word data access : 000-1FF_H
- word data access : 000-3FF_H

2. Memory Map

■ MODE SETTINGS

The FR family uses mode pins (MD2 to MD0) and a mode data to set the operation mode.

1. Mode Pins

The MD2, MD1, and MD0 pins specify how the mode vector fetch and reset vector fetch is performed. Setting is prohibited other than that shown in the following table.

Mode Pins			Mode name	Reset vector access area	Remarks
MD2	MD1	MD0			
0	0	0	Internal ROM mode vector	Internal	
1	0	0	Flash serial write mode	—	

2. Mode data

Data written to the internal mode register (MODR) by a mode vector fetch is called mode data.

After an operation mode has been set in the mode register, the device operates in the operation mode.

The mode data is set by all reset source. User programs cannot set data to the mode register.

<Details of mode data description>

[bit31-24] Reserved bit

Be sure to set this bit to "00000111".

Operation is not guaranteed when any value other than "00000111" is set.

3. Note

Mode data set in the mode vector must be placed as byte data at 0X000FFF8.

Use the highest byte from bit 31 to bit 24 for placement as the FR family uses the big endian method for byte endian.

MB91260B Series

■ I/O MAP

This shows the location of the various peripheral resource registers in the memory space.

Address	Register				Block
	+ 0	+ 1	+ 2	+ 3	
000000 _H	PDR0 [R/W]B XXXXXXXX	PDR1 [R/W]B XXXXXXXX	PDR2 [R/W]B XXXXXXXX	PDR3 [R/W]B XXXXXXXX	Port data register

Read/write attribute, Access unit
(B : byte, H : half word, W : word)

Initial value after a reset

Register name (First-column register at address 4n; second-column register at address 4n + 2)

Location of left-most register (When using word access, the register in column 1 is in the MSB side of the data.)

Note : Initial values of register bits are represented as follows :

- " 1 " : Initial Value : " 1 "
- " 0 " : Initial Value : " 0 "
- " X " : Initial Value : " undefined "
- " - " : No physical register at this location

*1 : The lower 16 bits (DTC[15: 0]) of DMACA0 to DMACA4 cannot be accessed in bytes.

*2 : The initial value of 1FLWC (7004H) is "00010011_B" on EVA tool.

Writing "00000011_B" on the evaluation model has no effect on its operation.

Notes : • Do not excute Read Modify Write instructions on registers having a write-only bit.

• Data is undefined in reseved or (-) area.

■ PIN STATUS IN EACH CPU STATE

Terms used as the status of pins mean as follows.

- Input enabled
- Indicates that the input function can be used.
- Input 0 fixed
- Indicates that the input level has been internally fixed to be 0 to prevent leakage when the input is released.
- Output Hi-Z
- Means the placing of a pin in a high impedance state by preventing the transistor for driving the pin from driving.
- Output is maintained.
- Indicates the output in the output state existing immediately before this mode is established.
- If the device enters this mode with an internal output peripheral operating or while serving as an output port, the output is performed by the internal peripheral or the port output is maintained, respectively.
- State existing immediately before is maintained.
- When the device serves for output or input immediately before entering this mode, the device maintains the output or is ready for the input, respectively.

H level average output current	I_{OHAV}	—	- 4	mA	*3
H level total maximum output current	ΣI_{OH}	—	- 50	mA	
H level total average output current	ΣI_{OHAV}	—	- 20	mA	*4
Power consumption	P_D	—	600	mW	FLASH product
			600		MASK product $T_a \leq +85\text{ °C}$
			360		MASK product $T_a \leq +105\text{ °C}$ *5
Operating temperature	T_a	- 40	+ 105	°C	MASK product (at single chip operating)
		- 40	+ 85	°C	FLASH product (at single chip operating)
Storage temperature	T_{stg}	- 55	125	°C	

*1 : Be careful not to exceed $V_{CC} + 0.3\text{ V}$, for example, when the power is turned on.

Be careful not to let AV_{CC} exceed V_{CC} , for example, when the power is turned on.

*2 : The maximum output current is the peak value for a single pin.

*3 : The average output current is the average current for a single pin over a period of 100 ms.

*4 : The total average output current is the average current for all pins over a period of 100 ms.

*5 : For use at $T_a = +105\text{ °C}$, lower the operating frequency to reduce power consumption.

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

MB91260B Series

2. Recommended Operating Conditions

($V_{SS} = AV_{SS} = 0\text{ V}$)

Parameter	Symbol	Value		Unit	Remarks
		Min	Max		
Power supply voltage	V_{CC}	4.0	5.5	V	At normal operating
Analog power supply voltage	AV_{CC}	$V_{SS} + 4.0$	$V_{SS} + 5.5$	V	
Analog reference voltage	AVRH0	AV_{SS}	AV_{CC}	V	For A/D converter 0
	AVRH1	AV_{SS}	AV_{CC}	V	For A/D converter 1
	AVRH2	AV_{SS}	AV_{CC}	V	For A/D converter 2
Operating temperature	T_a	- 40	+ 105	°C	MASK product (at single chip operation)
		- 40	+ 85	°C	FLASH product (at single chip operation)

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

MB91260B Series

3. DC Characteristics

($V_{CC} = 4.0$ to 5.5 V, $V_{SS} = AV_{SS} = 0$ V)

Parameter	Symbol	Pin	Conditions	Value			Unit	Remarks
				Min	Typ	Max		
"H" level input voltage	V_{IH}	Other than hysteresis input pin	—	$0.8 \times V_{CC}$	—	V_{CC}	V	
	V_{IHS}	Hysteresis input pin	—	$V_{CC} - 0.4$	—	V_{CC}	V	
Input Low Voltage	V_{IL}	Other than hysteresis input pin	—	V_{SS}	—	$0.2 \times V_{CC}$	V	
	V_{ILS}	Hysteresis input pin	—	V_{SS}	—	$V_{SS} + 0.4$	V	
"H" level output voltage	V_{OH}	Other than port 30 to 35	$V_{CC} = 5.0$ V, $I_{OH} = 4.0$ mA	$V_{CC} - 0.5$	—	—	V	
	V_{OH2}	Port 30 to 35	$V_{CC} = 5.0$ V, $I_{OH} = 8.0$ mA	$V_{CC} - 0.7$	—	—	V	
Output Low Voltage	V_{OL}	Other than port 30 to 35	$V_{CC} = 5.0$ V, $I_{OL} = 4.0$ mA	—	—	0.4	V	
	V_{OL2}	Port 30 to 35	$V_{CC} = 5.0$ V, $I_{OL} = 12$ mA	—	—	0.6	V	
Input leak current	I_{LI}	—	$V_{CC} = 5.0$ V, $V_{SS} \leq V_I \leq V_{CC}$	-5	—	5	μ A	
Pullup resistance	R_{PULL}	\overline{INIT} , Pull-up pin	—	—	50	—	k Ω	
Power supply current	I_{CC}	V_{CC}	$V_{CC} = 5.0$ V, 33 MHz	—	90	100	mA	
	I_{CCS}	V_{CC}	$V_{CC} = 5.0$ V, 33 MHz	—	60	80	mA	At SLEEP
	I_{CCH}	V_{CC}	$V_{CC} = 5.0$ V, $T_a = +25$ °C	—	300	—	μ A	At STOP
Input capacitance	C_{IN}	Other than V_{CC} , V_{SS} , AV_{CC} , AV_{SS} , AVRH0, 1, 2	—	—	10	—	pF	

MB91260B Series

4. FLASH MEMORY write/erase characteristics

Parameter	Conditions	Value			Unit	Remarks
		Min	Typ	Max		
Sector erase time	Ta = +25 °C, Vcc = 5.0 V	—	1	15	s	Not including time for internal writing before deletion.
Chip erase time	Ta = +25 °C, Vcc = 5.0 V	—	10	—	s	Not including time for internal writing before deletion.
Byte write time	Ta = +25 °C, Vcc = 5.0 V	—	8	3,600	μs	Not including system-level overhead time.
Chip write time	Ta = +25 °C, Vcc = 5.0 V	—	2.1	—	s	Not including system-level overhead time.
Erase/write cycle		10,000	—	—	Cycle	

5. AC Characteristics

(1) Clock Timing Ratings

($V_{CC} = 4.0$ to 5.5 V, $V_{SS} = AV_{SS} = 0$ V)

Parameter	Symbol	Pin	Conditions	Value			Unit	Remarks
				Min	Typ	Max		
Clock frequency	f_c	X0 X1	—	3.6	—	12	MHz	For using the PLL within the self-oscillation enabled range, set the multiplier for the internal clock not to let the operating frequency exceed 33 MHz.
Clock cycle time	t_c	X0 X1		83.3	—	278	ns	
Internal operating clock frequency	f_{CP}	—	When 4.125 MHz is input as the X0 clock frequency and $\times 8$ multiplication is set for the PLL of the oscillator circuit.	2.06*	—	33	MHz	CPU
	f_{CPP}			2.06*	—	33	MHz	Peripheral
Internal operating clock cycle time	t_{CP}	—		30.3	—	485*	ns	CPU
	t_{CPP}			30.3	—	485*	ns	Peripheral

* : The values assume a gear cycle of 1/16.

MB91260B Series

• Operation Assurance Range

• Internal clock setting range

MB91260B Series

(2) Reset Input

($V_{CC} = 4.0$ to 5.5 V, $V_{SS} = AV_{SS} = 0$ V)

Parameter	Symbol	Pin	Conditions	Value		Unit	Remarks
				Min	Max		
Init input time (at power-on and STOP mode)	t_{INTL}	INIT	—	Oscillation time of oscillator + $t_c \times 10$	—	ns	
Init input time (other than the above)				$t_c \times 10$	—	ns	

MB91260B Series

(3) UART Timing

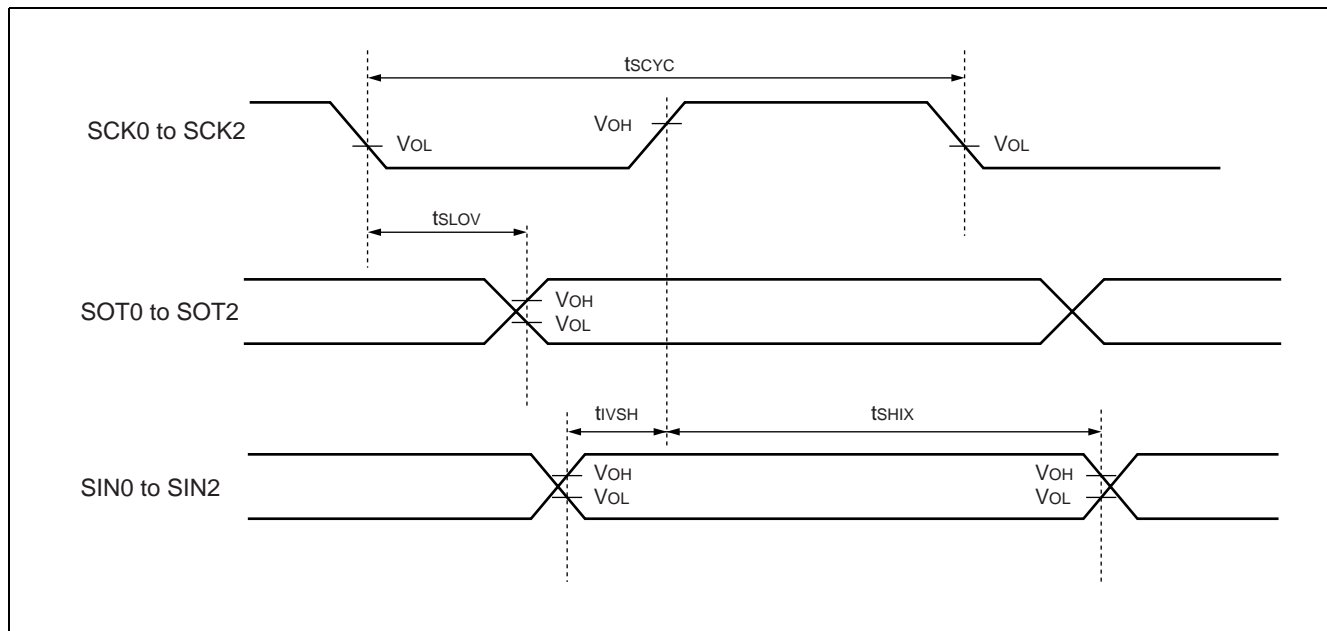

($V_{CC} = 4.0$ to 5.5 V, $V_{SS} = AV_{SS} = 0$ V)

Parameter	Symbol	Pin	Conditions	Value		Unit	Remarks
				Min	Max		
Serial clock cycle time	t_{SCYC}	SCK0 to SCK2	Internal shift clock mode	$8 t_{CYCP}$	—	ns	
SCK ↓ → SOT delay time	t_{SLOV}	SCK0 to SCK2, SOT0 to SOT2		- 80	80	ns	
Valid SIN → SCK ↑	t_{IVSH}	SCK0 to SCK2, SIN0 to SIN2		100	—	ns	
SCK ↑ → valid SIN hold time	t_{SHIX}	SCK0 to SCK2, SIN0 to SIN2		60	—	ns	
Serial clock H pulse width	t_{SHSL}	SCK0 to SCK2	External shift clock mode	$4 t_{CYCP}$	—	ns	
Serial clock L pulse width	t_{LSLH}	SCK0 to SCK2		$4 t_{CYCP}$	—	ns	
SCK ↓ → SOT delay time	t_{SLOV}	SCK0 to SCK2, SOT0 to SOT2		—	150	ns	
Valid SIN → SCK ↑	t_{IVSH}	SCK0 to SCK2, SIN0 to SIN2		60	—	ns	
SCK ↑ → valid SIN hold time	t_{SHIX}	SCK0 to SCK2, SIN0 to SIN2		60	—	ns	

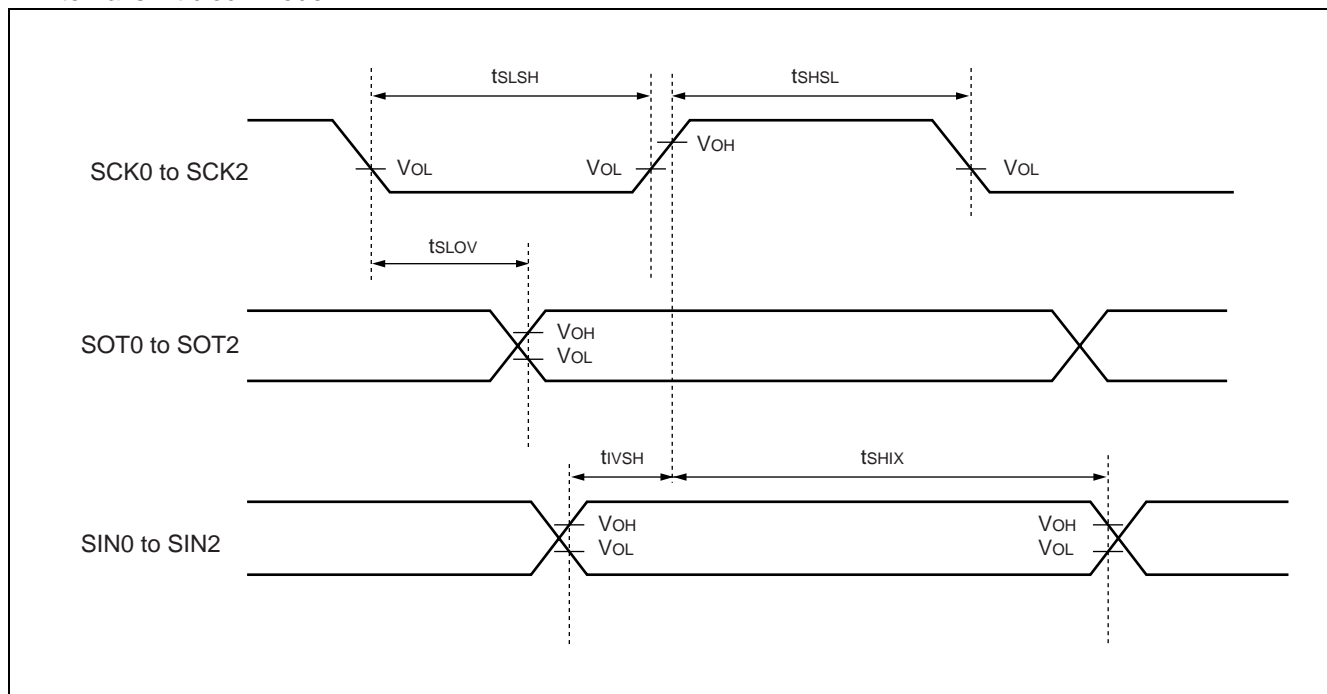

- Notes :
- There are the AC ratings for CLK synchronous mode.
 - t_{CYCP} indicates the peripheral clock cycle time.

(4) Free-run Timer Clock, PWC Input and Reload Timer Trigger Timing

($V_{CC} = 4.0$ to 5.5 V, $V_{SS} = AV_{SS} = 0$ V)

Parameter	Symbol	Pin	Conditions	Value		Unit	Remarks
				Min	Max		
Input pulse width	t_{TIWH} t_{TIWL}	CKI PW10, PW11 TIN0 to TIN2	—	4 t_{CYCP}	—	ns	

Note : t_{CYCP} indicates the peripheral clock cycle time.

(5) Trigger Input Timing

 $(V_{CC} = 4.0 \text{ to } 5.5 \text{ V}, V_{SS} = AV_{SS} = 0 \text{ V})$

Parameter	Symbol	Pin	Conditions	Value		Unit	Remarks
				Min	Max		
Input capture trigger input	t_{INP}	IC0 to IC3	—	$5 t_{CYCP}$	—	ns	
A/D activation trigger input	t_{ATGX}	ADTG0 to ADTG2	—	$5 t_{CYCP}$	—	ns	

Note : t_{CYCP} indicates the peripheral clock cycle time.

MB91260B Series

6. Electrical Characteristics for the A/D Converter

($V_{CC} = AV_{CC} = 5.0\text{ V}$, $V_{SS} = AV_{SS} = 0\text{ V}$)

Parameter	Symbol	Pin	Value			Unit	Remarks
			Min	Typ	Max		
Resolution	—	—	—	—	10	bit	
Total error* ¹	—	—	- 4	—	4	LSB	At $AVRHn^{*4} = 5.0\text{ V}$
Linearity error*	—	—	- 3.5	—	3.5	LSB	
Differential linearity error* ¹	—	—	- 3	—	3	LSB	
Zero transition voltage* ¹	V_{OT}	AN0 to AN11	$AV_{SS} - 3.5$	$AV_{SS} + 0.5$	$AV_{SS} + 4.5$	LSB	
Full transition voltage* ¹	V_{FST}	AN0 to AN11	$AVRH - 5.5$	$AVRH - 1.5$	$AVRH + 2.5$	LSB	
Conversion time	—	—	1.2* ²	—	—	μS	
Analog port Input current	I_{AIN}	AN0 to AN11	—	—	10	μA	
Analog input voltage	V_{AIN}	AN0 to AN11	AV_{SS}	—	$AVRH$	V	
Reference voltage	—	$AVRHn$	AV_{SS}	—	AV_{CC}	V	
Analog power supply current (analog + digital)	I_A	AV_{CC}	—	2	—	mA	Per 1 unit
	I_{AH}^{*3}		—	—	100	μA	Per 1 unit
reference power supply current (between $AVRH$ and AV_{SS})	I_R	$AVRHn$	—	1	—	mA	Per 1 unit $AVRHn^{*4} = 5.0\text{ V}$, at $AV_{SS} = 0\text{ V}$
	I_{RH}^{*3}		—	—	100	μA	per 1 unit at STOP
Analog input capacitance	—	—	—	10	—	pF	
Inter-channel disparity	—	AN0 to AN11	—	—	4	LSB	

*1 : Measured in the CPU sleep state

*2 : $V_{CC} = AV_{CC} = 5.0\text{ V}$, machine clock at 33 MHz

*3 : The current when the CPU is in stop mode and the A/D converter is not operating (at $V_{CC} = AV_{CC} = AVRHn = 5.0\text{ V}$)

*4 : $AVRHn = AVRHO, AVRHI, AVRH2$

Note : The above does not guarantee the inter-unit accuracy.
Set the output impedance of the external circuit $\leq 2\text{ k}\Omega$.

Definition of A/D Converter Terms

- Resolution : Analog variation that is recognized by an A/D converter.
- Linearity error : Zero transition point (00 0000 0000 \leftrightarrow 00 0000 0001) and full-scale transition point. Difference between the line connected (11 1111 1110 \leftrightarrow 11 1111 1111) and actual conversion characteristics.
- Differential linearity error : Deviation of input voltage, that is required for changing output code by 1 LSB, from an ideal value.
- Total error : This error indicates the difference between actual and ideal values, including the zero transition error/full-scale transition error/linearity error.

$$1\text{LSB}' \text{ (Ideal value)} = \frac{\text{AVRH} - \text{AVSS}}{1024} \text{ [V]} \quad \text{Total error of digital output N} = \frac{V_{\text{NT}} - \{1\text{LSB}' \times (N - 1) + 0.5\text{LSB}'\}}{1\text{LSB}'}$$

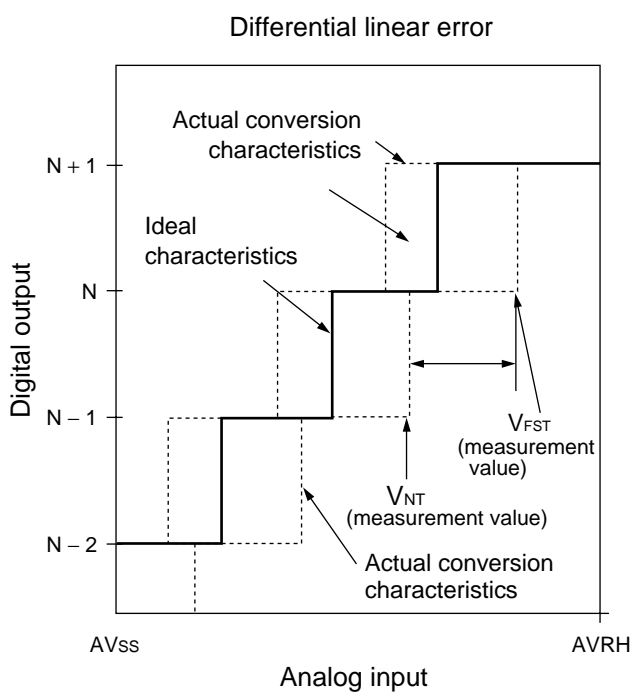

$$V_{\text{OT}}' \text{ (Ideal value)} = \text{AVSS} + 0.5\text{LSB}' \text{ [V]}$$

$$V_{\text{FST}}' \text{ (Ideal value)} = \text{AVRH} - 1.5\text{LSB}' \text{ [V]} \quad V_{\text{NT}}: \text{ A voltage at which digital output transitions from } (N + 1) \text{ to } N.$$

(Continued)

MB91260B Series

(Continued)

$$\text{Linearity error in digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + V_{OT}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$\text{Differential linearity error in digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1 \text{ [LSB]}$$

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ [V]}$$

V_{OT} : A voltage at which digital output transitions from 000_H to 001_H.

V_{FST} : A voltage at which digital output transitions from 3FE_H to 3FF_H.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
