CMOS

FR60 MB91460C Series

MB91F463CA, F465CA, F467CA, F467CB

■ DESCRIPTION

MB91460C series is a line of general-purpose 32-bit RISC microcontrollers designed for embedded control applications which require high-speed real-time processing, such as consumer devices and on-board vehicle systems. This series uses the FR60 CPU, which is compatible with the FR family* of CPUs.

This series contains the LIN-USART and CAN controllers.

* : FR, the abbreviation of FUJITSU RISC controller, is a line of products of FUJITSU Microelectronics Limited.

■ FEATURES

1. FR60 CPU core

- 32-bit RISC, load/store architecture, five-stage pipeline
- 16-bit fixed-length instructions (basic instructions)
- Instruction execution speed: 1 instruction per cycle
- Instructions including memory-to-memory transfer, bit manipulation, and barrel shift instructions: Instructions suitable for embedded applications
- Function entry/exit instructions and register data multi-load store instructions : Instructions supporting C language
- Register interlock function: Facilitating assembly-language coding
- Built-in multiplier with instruction-level support
 - Signed 32-bit multiplication : 5 cycles
 - Signed 16-bit multiplication : 3 cycles
- Interrupts (save PC/PS) : 6 cycles (16 priority levels)
- Harvard architecture enabling program access and data access to be performed simultaneously
- Instructions compatible with the FR family

Be sure to refer to the “Check Sheet” for the latest cautions on development.

“Check Sheet” is seen at the following support page

URL : <http://www.fujitsu.com/global/services/microelectronics/product/micom/support/index.html>

“Check Sheet” lists the minimal requirement items to be checked to prevent problems beforehand in system development.

2. Internal peripheral resources

- General-purpose ports : Maximum 104 ports
- DMAC (DMA Controller)
 - Maximum of 5 channels able to operate simultaneously.
 - 2 transfer sources (internal peripheral/software)
 - Activation source can be selected using software
 - Addressing mode specifies full 32-bit addresses (increment/decrement/fixed)
 - Transfer mode (demand transfer/burst transfer/step transfer/block transfer)
 - Fly-by transfer support (between external I/O and memory)
 - Transfer data size selectable from 8/16/32-bit
 - Multi-byte transfer enabled (by software)
 - DMAC descriptor in I/O areas (200H to 240H, 1000H to 1024H)
- A/D converter (successive approximation type)
 - 10-bit resolution: 30 channels
 - Conversion time: minimum 1 μ s
- External interrupt inputs : 15 channels
 - 8 channels shared with CAN RX or I²C pins
- Bit search module (for REALOS)
 - Function to search the first bit position of "1", "0", "changed" from the MSB (most significant bit) within one word
- LIN-USART (full duplex double buffer): 5 channels
 - Clock synchronous/asynchronous selectable
 - Sync-break detection
 - Internal dedicated baud rate generator
- I²C* bus interface (supports 400 kbps): 3 channels
 - Master/slave transmission and reception
 - Arbitration function, clock synchronization function
- CAN controller (C-CAN): 3 channels
 - Maximum transfer speed: 1 Mbps
 - 32 transmission/reception message buffers
- Stepper motor controller : 6 channels
 - 4 high current output to each channel
 - 2 synchronized PWMs per channel (8/10-bit)
- Sound generator : 1 channel
 - Tone frequency : PWM frequency divide-by-two (reload value + 1)
- Alarm comparator : 1 channel
 - Monitor external voltage
 - Generate an interrupt in case of voltage lower/higher than the defined thresholds (reference voltage)
- 16-bit PPG timer : 12 channels
- 16-bit PFM timer : 1 channel
- 16-bit reload timer: 8 channels
- 16-bit free-run timer: 8 channels (1 channel each for ICU and OCU)
- Input capture: 8 channels (operates in conjunction with the free-run timer)
- Output compare: 4 channels (operates in conjunction with the free-run timer)
- Up/Down counter: 3 channels (3*8-bit or 2*16-bit)
- Watchdog timer
- Real-time clock
- Low-power consumption modes : Sleep/stop mode function
- Low voltage detection circuit

(Continued)

(Continued)

- Clock supervisor

Monitors the sub-clock (32 kHz) and the main clock (4 MHz), and switches to a recovery clock (CR oscillator, etc.) when the oscillations stop.

- Clock modulator

- Clock monitor

- Sub-clock calibration

Corrects the real-time clock timer when operating with the 32 kHz or CR oscillator

- Main oscillator stabilization timer

Generates an interrupt in sub-clock mode after the stabilization wait time has elapsed on the 23-bit stabilization wait time counter

- Sub-oscillator stabilization timer

Generates an interrupt in main clock mode after the stabilization wait time has elapsed on the 15-bit stabilization wait time counter

3. Package and technology

- Package : QFP-144

- CMOS 180 nm technology

- Power supply range 3 V to 5 V (1.8 V internal logic provided by a step-down voltage converter)

- Operating temperature range: between – 40°C and + 105°C

Note * Purchase of Fujitsu I²C components conveys a license under the Philips I²C Patent Rights to use these components in an I²C system provided that the system conforms to the I²C Standard Specification as defined by Philips.

■ PIN DESCRIPTION

1. MB91F463CA, MB91F465CA, MB91F467Cx

Pin no.	Pin name	I/O	I/O circuit type*	Function
2 to 9	P02_0 to P02_7	I/O	A	General-purpose input/output ports
10 to 17	P14_0 to P14_7	I/O	A	General-purpose input/output ports
	ICU0 to ICU7			Input capture input pins
	TIN0 to TIN7			External trigger input pins of reload timer
	TTG8/0 to TTG15/7			External trigger input pins of PPG timer
20 to 23	P15_0 to P15_3	I/O	A	General-purpose input/output ports
	OCU0 to OCU3			Output compare output pins
	TOT0 to TOT3			Reload timer output pins
24 to 27	P17_4 to P17_7	I/O	A	General-purpose input/output ports
	PPG4 to PPG7			Output pins of PPG timer
28 to 31	P16_0 to P16_3	I/O	A	General-purpose input/output ports
	PPG8 to PPG11			Output pins of PPG timer
32	P16_4	I/O	A	General-purpose input/output ports
	PPG12			Output pins of PPG timer
	SGA			SGA output pin of sound generator
33	P16_5	I/O	A	General-purpose input/output ports
	PPG13			Output pins of PPG timer
	SGO			SGO output pin of sound generator
34	P16_6	I/O	A	General-purpose input/output ports
	PPG14			Output pins of PPG timer
	PFM			Pulse frequency modulator output pin
35	P16_7	I/O	A	General-purpose input/output ports
	PPG15			Output pins of PPG timer
	ATGX			A/D converter external trigger input pin
38	P20_0	I/O	A	General-purpose input/output ports
	SIN2			Data input pin of USART2
	AIN0			Up/down counter input pin
39	P20_1	I/O	A	General-purpose input/output ports
	SOT2			Data output pin of USART2
	BIN0			Up/down counter input pin
40	P20_2	I/O	A	General-purpose input/output ports
	SCK2			Clock input/output pin of USART2
	ZIN0			Up/down counter input pin
	CK2			External clock input pin of free-run timer 2

MB91460C Series PRELIMINARY

Pin no.	Pin name	I/O	I/O circuit type*	Function
41	P19_0	I/O	A	General-purpose input/output ports

Analog input</p>

PRELIMINARY MB91460C Series

Type	Circuit	Remarks
C	 <p>The circuit diagram illustrates a CMOS level output stage. It features a top NMOS pull-up path and a bottom PMOS pull-down path. Both paths are controlled by a logic gate (inverter) that receives a "pull-up control" signal. The drain of the top NMOS is connected to the source of a PMOS switch, which is controlled by a "pull-down control" signal. The drain of the PMOS switch is connected to the drain of a second NMOS transistor. This second NMOS is part of a CMOS hysteresis type1 circuit, which includes a diode from its drain back to its source. Below it is a similar CMOS hysteresis type2 circuit. The outputs of these hysteresis stages are connected to three automotive inputs. A TTL input is also present, along with a standby control for input shutdown. A resistor R is connected between the TTL input and the hysteresis type1 stage.</p>	<p>CMOS level output ($I_{OL} = 3mA$, $I_{OH} = -3mA$) 2 different CMOS hysteresis inputs with input shutdown function Automotive input with input shutdown function TTL input with input shutdown function Programmable pull-up resistor: $50k\Omega$ approx.</p>
D	 <p>This circuit diagram is identical to Type C, except it includes an additional analog input stage at the bottom. This stage consists of a diode-connected NMOS transistor followed by a diode-connected PMOS transistor, with their drains connected to ground. The analog input is connected to the drain of the PMOS transistor and to the source of the NMOS transistor via a resistor.</p>	<p>CMOS level output ($I_{OL} = 3mA$, $I_{OH} = -3mA$) 2 different CMOS hysteresis inputs with input shutdown function Automotive input with input shutdown function TTL input with input shutdown function Programmable pull-up resistor: $50k\Omega$ approx. Analog input</p>

■ HANDLING DEVICES

1. Preventing Latch-up

Latch-up may occur in a CMOS IC if a voltage higher than (V_{DD5} , V_{DD35} or HV_{DD5}^{*1}) or less than (V_{SS5} or HV_{SS5}^{*1}) is applied to an input or output pin or if a voltage exceeding the rating is applied between the power supply pins and ground pins. If latch-up occurs, the power supply current increases rapidly, sometimes resulting in thermal breakdown of the device. Therefore, be very careful not to apply voltages in excess of the absolute maximum ratings.

Note *1: HV_{DD5} , HV_{SS5} are available only on devices having Stepper Motor Controller.

2. Handling of unused input pins

If unused input pins are left open, abnormal operation may result. Any unused input pins should be connected to pull-up or pull-down resistor (2K Ω to 10K Ω) or enable internal pullup or pulldown resistors (PPER/PPCR) before the input enable (PORTEN) is activated by software. The mode pins MD_x can be connected to V_{SS5} or V_{DD5} directly. Unused ALARM input pins can be connected to AV_{SS5} directly.

3. Power supply pins

In MB91460 series, devices including multiple power supply pins and ground pins are designed as follows; pins necessary to be at the same potential are interconnected internally to prevent malfunctions such as latch-up. All of the power supply pins and ground pins must be externally connected to the power supply and ground respectively in order to reduce unnecessary radiation, to prevent strobe signal malfunctions due to the ground level rising and to follow the total output current ratings. Furthermore, the power supply pins and ground pins of the MB91460 series must be connected to the current supply source via a low impedance.

It is also recommended to connect a ceramic capacitor of approximately 0.1 μF as a bypass capacitor between power supply pin and ground pin near this device.

This series has a built-in step-down regulator. Connect a bypass capacitor of 4.7 μF (use a X7R ceramic capacitor) to VCC18C pin for the regulator.

4. Crystal oscillator circuit

Noise in proximity to the X0 (X0A) and X1 (X1A) pins can cause the device to operate abnormally. Printed circuit boards should be designed so that the X0 (X0A) and X1 (X1A) pins, and crystal oscillator, as well as bypass capacitors connected to ground, are located near the device and ground.

It is recommended that the printed circuit board layout be designed such that the X0 and X1 pins or X0A and X1A pins are surrounded by ground plane for the stable operation.

Please request the oscillator manufacturer to evaluate the oscillational characteristics of the crystal and this device.

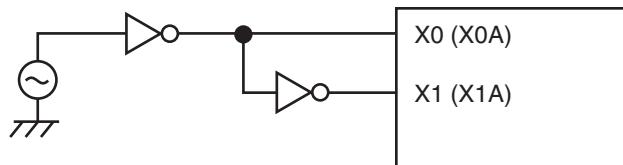

5. Notes on using external clock

When using the external clock, it is necessary to simultaneously supply the X0 (X0A) and the X1 (X1A) pins. In the described combination, X1 (X1A) should be supplied with a clock signal which has the opposite phase to the X0 (X0A) pins. At X0 and X1, a frequency up to 16 MHz is possible.

(Continued)

(Continued)

Example of using opposite phase supply

6. Mode pins (MD_x)

These pins should be connected directly to the power supply or ground pins. To prevent the device from entering test mode accidentally due to noise, minimize the lengths of the patterns between each mode pin and power supply pin or ground pin on the printed circuit board as possible and connect them with low impedance.

7. Notes on operating in PLL clock mode

If the oscillator is disconnected or the clock input stops when the PLL clock is selected, the microcontroller may continue to operate at the free-running frequency of the self-oscillating circuit of the PLL. However, this self-running operation cannot be guaranteed.

8. Pull-up control

The AC standard is not guaranteed in case a pull-up resistor is connected to the pin serving as an external bus pin.

■ NOTES ON DEBUGGER

1. Execution of the RETI Command

If single-step execution is used in an environment where an interrupt occurs frequently, the corresponding interrupt handling routine will be executed repeatedly to the exclusion of other processing. This will prevent the main routine and the handlers for low priority level interrupts from being executed (For example, if the time-base timer interrupt is enabled, stepping over the RETI instruction will always break on the first line of the time-base timer interrupt handler).

Disable the corresponding interrupts when the corresponding interrupt handling routine no longer needs debugging.

2. Break function

If the range of addresses that cause a hardware break (including event breaks) is set to the address of the current system stack pointer or to an area that contains the stack pointer, execution will break after each instruction regardless of whether the user program actually contains data access instructions.

To prevent this, do not set (word) access to the area containing the address of the system stack pointer as the target of the hardware break (including an event breaks).

3. Operand break

It may cause malfunctions if a stack pointer exists in the area which is set as the DSU operand break. Do not set the access to the areas containing the address of system stack pointer as a target of data event break.

4. Notes on PS register

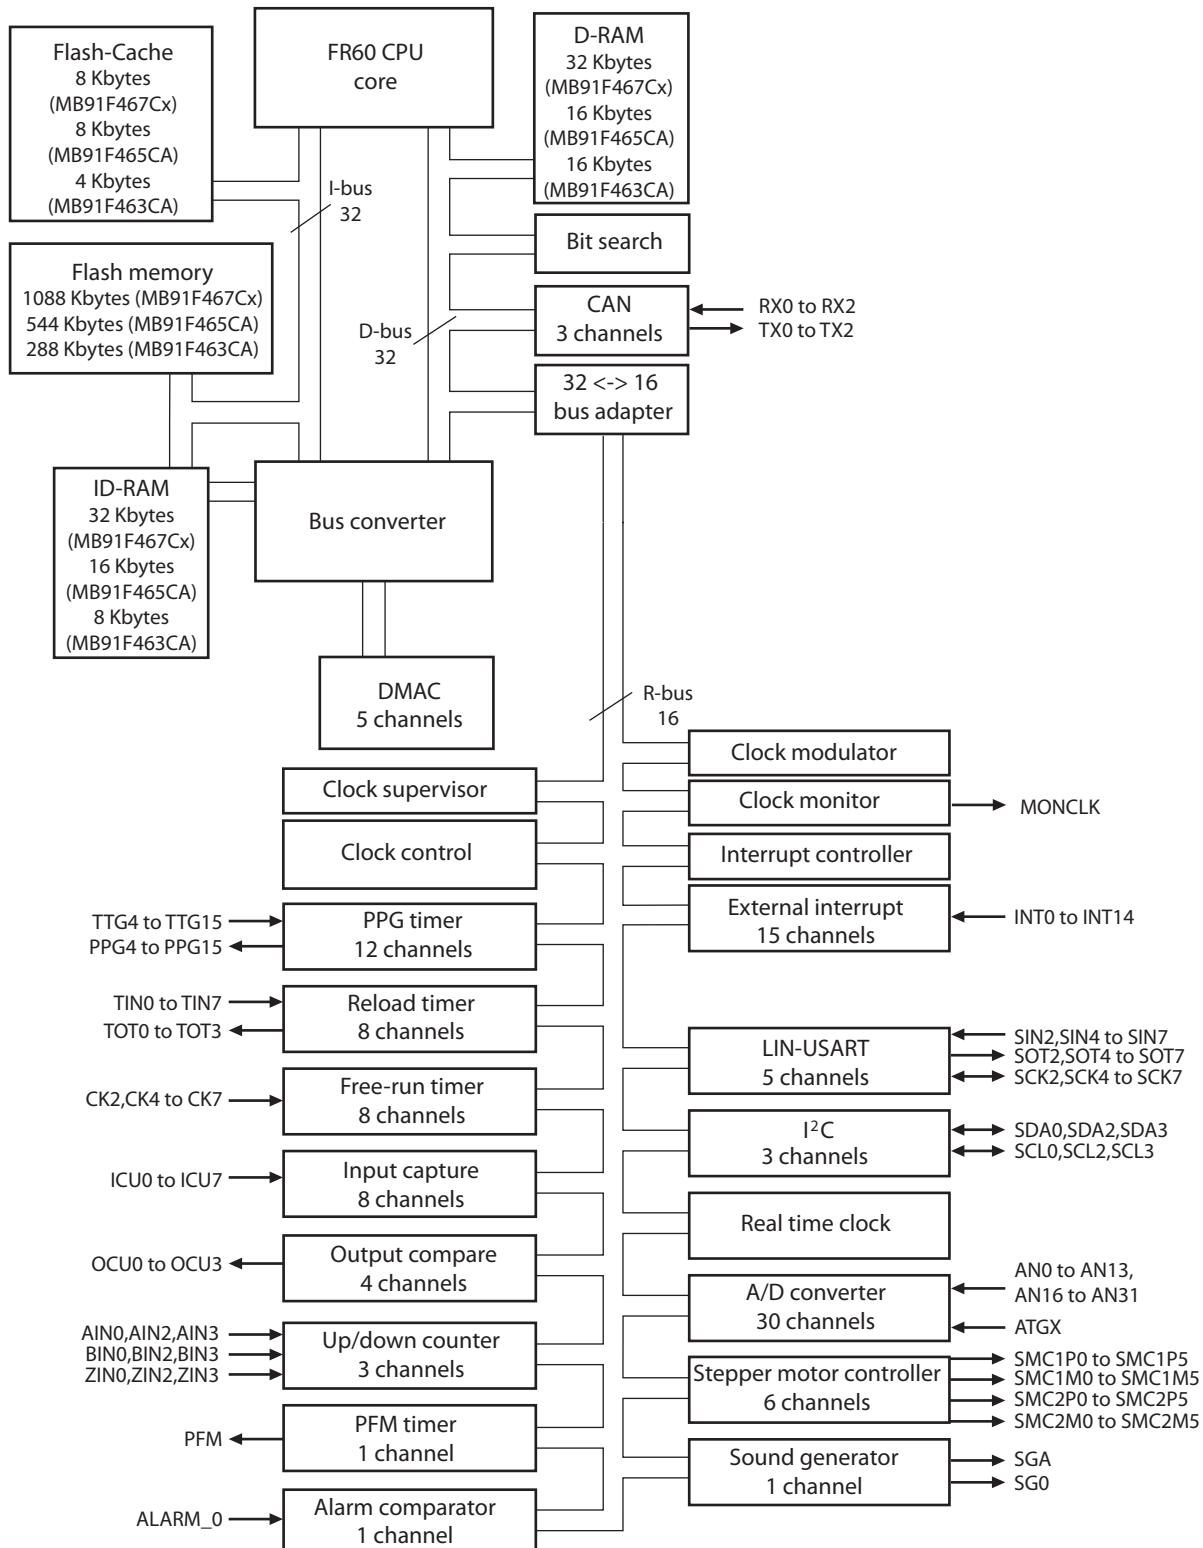

As the PS register is processed in advance by some instructions, when the debugger is being used, the exception handling may result in execution breaking in an interrupt handling routine or the displayed values of the flags in the PS register being updated.

As the microcontroller is designed to carry out reprocessing correctly upon returning from such an EIT event, the operation before and after the EIT always proceeds according to specification.

- **The following behavior may occur if any of the following occurs in the instruction immediately after a DIV0U/DIV0S instruction:**
 - (a) a user interrupt or NMI is accepted;
 - (b) single-step execution is performed;
 - (c) execution breaks due to a data event or from the emulator menu.
 - 1. D0 and D1 flags are updated in advance.
 - 2. An EIT handling routine (user interrupt/NMI or emulator) is executed.
 - 3. Upon returning from the EIT, the DIV0U/DIV0S instruction is executed and the D0 and D1 flags are updated to the same values as those in 1.
- **The following behavior occurs when an ORCCR, STILM, MOV Ri,PS instruction is executed to enable a user interrupt or NMI source while that interrupt is in the active state.**
 - 1. The PS register is updated in advance.
 - 2. An EIT handling routine (user interrupt/NMI or emulator) is executed.
 - 3. Upon returning from the EIT, the above instructions are executed and the PS register is updated to the same value as in 1.

■ BLOCK DIAGRAM

1. MB91F463CA, MB91F465CA, MB91F467Cx

■ CPU AND CONTROL UNIT

The FR family CPU is a high performance core that is designed based on the RISC architecture with advanced instructions for embedded applications.

1. Features

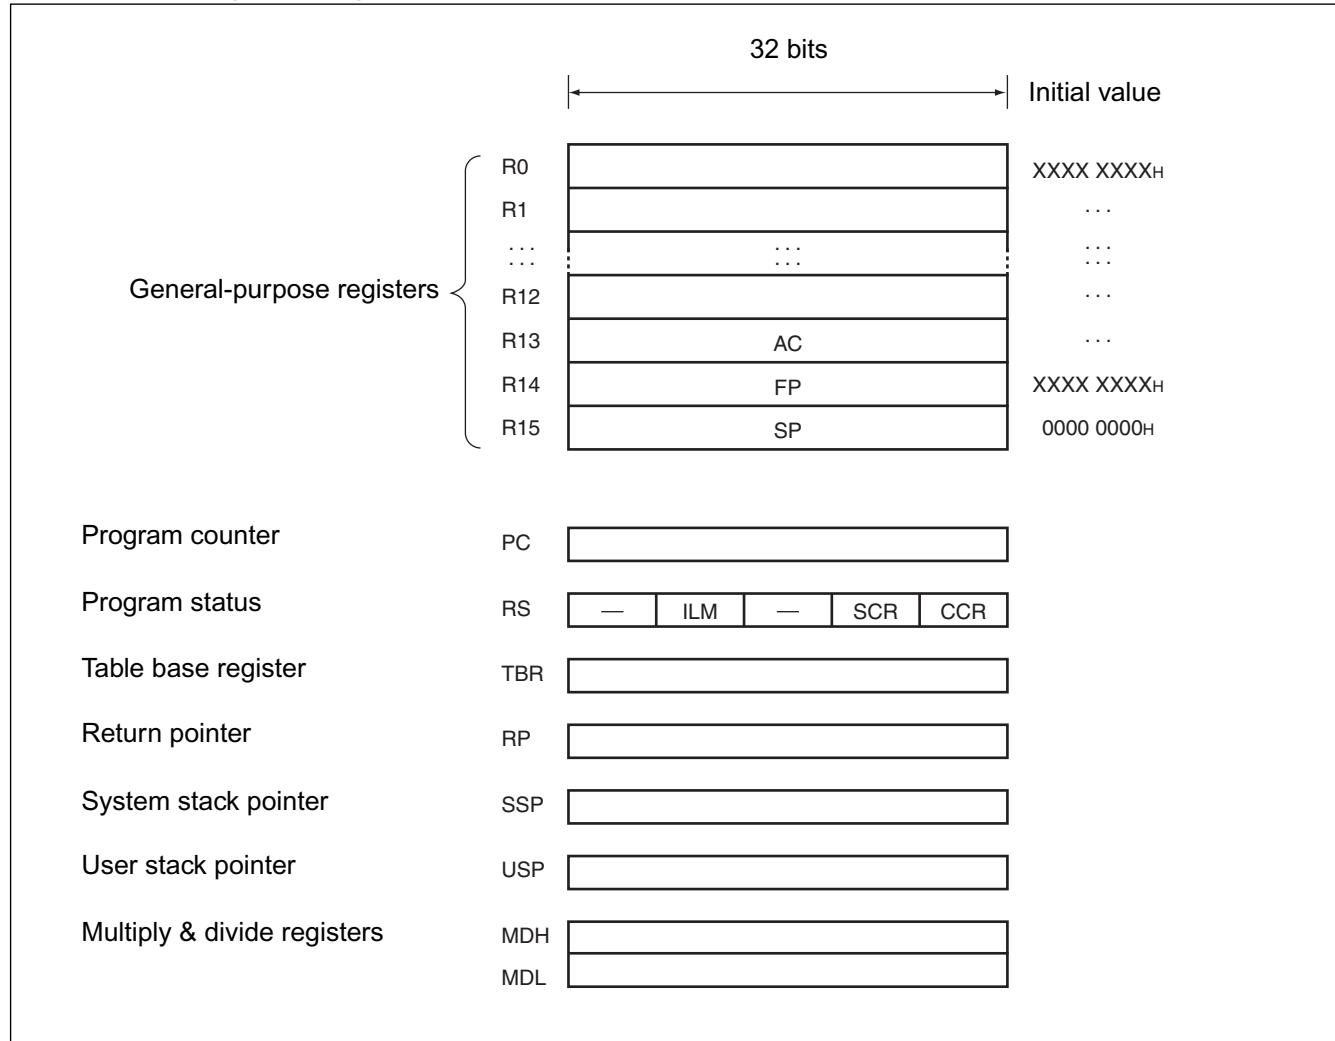

- Adoption of RISC architecture
 - Basic instruction: 1 instruction per cycle
- General-purpose registers: 32-bit 16 registers
- 4 Gbytes linear memory space
- Multiplier installed
 - 32-bit 32-bit multiplication: 5 cycles
 - 16-bit 16-bit multiplication: 3 cycles
- Enhanced interrupt processing function
 - Quick response speed (6 cycles)
 - Multiple-interrupt support
 - Level mask function (16 levels)
- Enhanced instructions for I/O operation
 - Memory-to-memory transfer instruction
 - Bit processing instruction
 - Basic instruction word length: 16 bits
- Low-power consumption
 - Sleep mode/stop mode

2. Internal architecture

- The FR family CPU uses the Harvard architecture in which the instruction bus and data bus are independent of each other.
- A 32-bit ↔ 16-bit buffer is connected to the 32-bit bus (D-bus) to provide an interface between the CPU and peripheral resources.
- A Harvard ↔ Princeton bus converter is connected to both the I-bus and D-bus to provide an interface between the CPU and the bus controller.

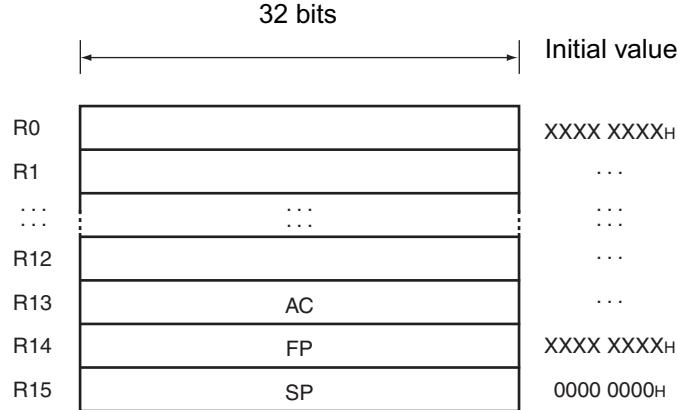

3. Programming model

3.1. Basic programming model

4. Registers

4.1. General-purpose register

Registers R0 to R15 are general-purpose registers. These registers can be used as accumulators for computation operations and as pointers for memory access.

Of the 16 registers, enhanced commands are provided for the following registers to enable their use for particular applications.

R13 : Virtual accumulator

R14 : Frame pointer

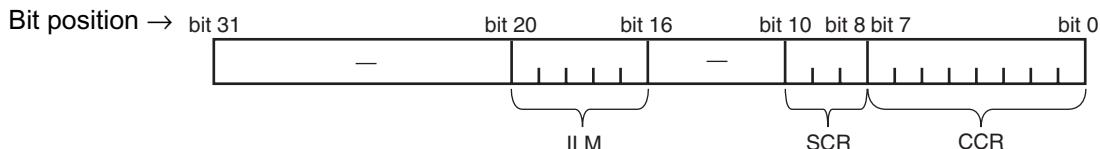

R15 : Stack pointer

Initial values at reset are undefined for R0 to R14. The value for R15 is 00000000H (SSP value).

4.2. PS (Program Status)

This register holds the program status, and is divided into three parts, ILM, SCR, and CCR.

All undefined bits (-) in the diagram are reserved bits. The read values are always "0". Write access to these bits is invalid.

4.3. CCR (Condition Code Register)

	bit 7	bit 6	bit 5	bit 4	bit 3	bit 2	bit 1	bit 0	Initial value
	—	SV	S	I	N	Z	V	C	- 000XXXXB

SV : Supervisor flag

S : Stack flag

I : Interrupt enable flag

N : Negative enable flag

Z : Zero flag

V : Overflow flag

C : Carry flag

4.4. SCR (System Condition Register)

	bit 10	bit 9	bit 8	Initial value
	D1	D0	T	XX0B

Flag for step division (D1, D0)

This flag stores interim data during execution of step division.

Step trace trap flag (T)

This flag indicates whether the step trace trap is enabled or disabled.

The step trace trap function is used by emulators. When an emulator is in use, it cannot be used in execution of user programs.

4.5. ILM (Interrupt Level Mask register)

	bit 20	bit 19	bit 18	bit 17	bit 16	Initial value
	ILM4	ILM3	ILM2	ILM1	ILM0	01111B

This register stores interrupt level mask values, and the values stored in ILM4 to ILM0 are used for level masking.

The register is initialized to value “01111B” at reset.

4.6. PC (Program Counter)

	bit 31	bit 0	Initial value
			XXXXXXXXH

The program counter indicates the address of the instruction that is being executed.

The initial value at reset is undefined.

MB91460C Series PRELIMINARY

4.7. TBR (Table Base Register)

The table base register stores the starting address of the vector table used in EIT processing.

The initial value at reset is 000FFC00H.

4.8. RP (Return Pointer)

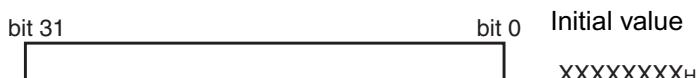

The return pointer stores the address for return from subroutines.

During execution of a CALL instruction, the PC value is transferred to this RP register.

During execution of a RET instruction, the contents of the RP register are transferred to PC.

The initial value at reset is undefined.

4.9. USP (User Stack Pointer)

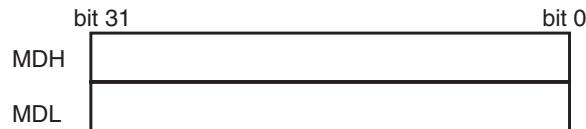

The user stack pointer, when the S flag is “1”, this register functions as the R15 register.

- The USP register can also be explicitly specified.

The initial value at reset is undefined.

- This register cannot be used with RETI instructions.

4.10. Multiply & divide registers

These registers are for multiplication and division, and are each 32 bits in length.

The initial value at reset is undefined.

■ EMBEDDED PROGRAM/DATA MEMORY (FLASH)

1. Flash features

- MB91F467Cx: 1088 Kbytes (16×64 Kbytes + 8×8 Kbytes = 8.5 Mbits)
- MB91F465CA: 544 Kbytes (8×64 Kbytes + 4×8 Kbytes = 4.25 Mbits)
- MB91F463CA: 288 Kbytes (4×64 Kbytes + 4×8 Kbytes = 2.25 Mbits)
- Programmable wait states for read/write access
- Flash and Boot security with security vector at 0x0014:8000 - 0x0014:800F
- Boot security
- Basic specification: Same as MBM29LV400TC (except size and part of sector configuration)

2. Operation modes:

(1) 64-bit CPU mode (available on MB91F467Cx only) :

- CPU reads and executes programs in word (32-bit) length units.
- Flash writing is not possible.
- Actual Flash Memory access is performed in d-word (64-bit) length units.

(1) 32-bit CPU mode:

- CPU reads and executes programs in word (32-bit) length units.
- Actual Flash Memory access is performed in word (32-bit) length units.

(2) 16-bit CPU mode:

- CPU reads and writes in half-word (16-bit) length units.
- Program execution from the Flash is not possible.
- Actual Flash Memory access is performed in word (16-bit) length units.

Note: The operation mode of the flash memory can be selected using a Boot-ROM function. The function start address is 0xBF60. The parameter description is given in the Hardware Manual in chapter 54.6 "Flash Access Mode Switching".

3.2. Flash access timing settings in CPU mode

The following tables list all settings for a given maximum Core Frequency (through the setting of CLKB or maximum clock modulation) for Flash read and write access.

3.2.1. Flash read timing settings (synchronous read)

Core clock (CLKB)	ATD	ALEH	EQ	WEXH	WTC	Remark
to 24 MHz	0	0	0	-	1	
to 48 MHz	0	0	1	-	2	
to 100 MHz	1	1	3	-	4	

3.2.2. Flash write timing settings (synchronous write)

Core clock (CLKB)	ATD	ALEH	EQ	WEXH	WTC	Remark
to 16 MHz	0	-	-	0	3	
to 32 MHz	0	-	-	0	4	
to 48 MHz	0	-	-	0	5	
to 64 MHz	1	-	-	0	6	
to 96 MHz	1	-	-	0	7	
to 100 MHz	1	-	-	1	8	

MB91460C Series PRELIMINARY

3.3. Address mapping from CPU to parallel programming mode

The following tables show the calculation from CPU addresses to flash macro addresses which are used in parallel programming.

3.3.1. Address mapping MB91F467Cx

CPU Address (addr)	Condition	Flash sectors	FA (flash address) Calculation
14:0000h to 14:FFFFh	addr[2]==0	SA0, SA2, SA4, SA6 (8 Kbyte)	FA := addr - addr%00:4000h + (addr%00:4000h)/2 - (addr/2)%4 + addr%4 - 05:0000h
14:0000h to 14:FFFFh	addr[2]==1	SA1, SA3, SA5, SA7 (8 Kbyte)	FA := addr - addr%00:4000h + (addr%00:4000h)/2 + 00:2000h - (addr/2)%4 + addr%4 - 05:0000h
04:0000h to 13:FFFFh	addr[2]==0	SA8, SA10, SA12, SA14, SA16, SA18, SA20, SA22 (64 Kbyte)	FA := addr - addr%02:0000 + (addr%02:0000h)/2 - (addr/2)%4 + addr%4 + 0C:0000h
04:0000h to 13:FFFFh	addr[2]==1	SA9, SA11, SA13, SA15, SA17, SA19, SA21, SA23 (64 Kbyte)	FA := addr - addr%02:0000h + (addr%02:0000h)/2 + 01:0000h - (addr/2)%4 + addr%4 + 0C:0000h

Note: FA result is without 20:0000h offset for parallel Flash programming .

Set offset by keeping FA[21] = 1 as described in section “Parallel Flash programming mode”.

3.3.2. Address mapping MB91F463CA, MB91F465CA

CPU Address (addr)	Condition	Flash sectors	FA (flash address) Calculation
14:8000h to 14:FFFFh	addr[2]==0	SA4, SA6 (8 Kbyte)	FA := addr - addr%00:4000h + (addr%00:4000h)/2 - (addr/2)%4 + addr%4 - 0D:0000h
14:8000h to 14:FFFFh	addr[2]==1	SA5, SA7 (8 Kbyte)	FA := addr - addr%00:4000h + (addr%00:4000h)/2 + 00:2000h - (addr/2)%4 + addr%4 - 0D:0000h
08:0000h to 13F:FFFFh	addr[2]==0	SA12, SA14 (MB91F465CA) SA16, SA18 (64 Kbyte)	FA := addr - addr%02:0000 + (addr%02:0000h)/2 - (addr/2)%4 + addr%4
08:0000h to 13F:FFFFh	addr[2]==1	SA13, SA15 (MB91F465CA) SA17, SA19 (64 Kbyte)	FA := addr - addr%02:0000h + (addr%02:0000h)/2 + 01:0000h - (addr/2)%4 + addr%4

Note: FA result is without 10:0000h offset for parallel Flash programming .

Set offset by keeping FA[20] = 1 as described in section “Parallel Flash programming mode”.

4. Parallel Flash programming mode

4.1. Flash configuration in parallel Flash programming mode

4.2. Pin connections in parallel programming mode

Resetting after setting the MD[2:0] pins to [111] will halt CPU functioning. At this time, the Flash memory's interface circuit enables direct control of the Flash memory unit from external pins by directly linking some of the signals to GP-Ports. Please see table below for signal mapping.

In this mode, the Flash memory appears to the external pins as a stand-alone unit. This mode is generally set when writing/erasing using the parallel Flash programmer. In this mode, all operations of the 8.5 Mbits Flash memory's Auto Algorithms are available.

Correspondence between MBM29LV400TC and Flash Memory Control Signals

MBM29LV400TC External pins	FR-CPU mode	MB91F465CA, MB91F467Cx external pins			Comment
		Flash memory mode	Normal function	Pin number	
—	INITX	—	INITX	84

5. Poweron Sequence in parallel programming mode

The flash memory can be accessed in programming mode after a certain wait time, which is needed for Security Vector fetch:

- Minimum wait time after VDD5/VDD5R power on: 2.76 ms
- Minimum wait time after INITX rising: 1.0 ms

6. Flash Security

6.1. Vector addresses

Two Flash Security Vectors (FSV1, FSV2) are located parallel to the Boot Security Vectors (BSV1, BSV2) controlling the protection functions of the Flash Security Module:

FSV1: 0x14:8000 BSV1: 0x14:8004
FSV2: 0x14:8008 BSV2: 0x14:800C

6.2. Security Vector FSV1

The setting of the Flash Security Vector FSV1 is responsible for the read and write protection modes and the individual write protection of the 8 Kbytes sectors.

6.2.1. FSV1 (bit31 to bit16)

The setting of the Flash Security Vector FSV1 bits [31:16] is responsible for the read and write protection modes.

Explanation of the bits in the Flash Security Vector FSV1[31:16]

FSV1[31:19]	FSV1[18] Write Protection Level	FSV1[17] Write Protection	FSV1[16] Read Protection	Flash Security Mode
set all to '0'	set to '0'	set to '0'	set to '1'	Read Protection (all device modes, except INTVEC mode MD[2:0] = "000")
set all to '0'	set to '0'	set to '1'	set to '0'	Write Protection (all device modes, without exception)
set all to '0'	set to '0'	set to '1'	set to '1'	Read Protection (all device modes, except INTVEC mode MD[2:0] = "000") and Write Protection (all device modes)
set all to '0'	set to '1'	set to '0'	set to '1'	Read Protection (all device modes, except INTVEC mode MD[2:0] = "000")
set all to '0'	set to '1'	set to '1'	set to '0'	Write Protection (all device modes, except INTVEC mode MD[2:0] = "000")
set all to '0'	set to '1'	set to '1'	set to '1'	Read Protection (all device modes, except INTVEC mode MD[2:0] = "000") and Write Protection (all device modes except INTVEC mode MD[2:0] = "000")

6.2.2. FSV1 (bit15 to bit0)

The setting of the Flash Security Vector FSV1 bits [15:0] is responsible for the individual write protection of the 8 Kbytes sectors. It is only evaluated if write protection bit FSV1[17] is set.

Explanation of the bits in the Flash Security Vector FSV1[15:0]

FSV1 bit	Sector	Enable Write Protection	Disable Write Protection	Comment
FSV1[0]	SA0	set to "0"	set to "1"	Sectors available on MB91F467Cx only
FSV1[1]	SA1	set to "0"	set to "1"	
FSV1[2]	SA2	set to "0"	set to "1"	
FSV1[3]	SA3	set to "0"	set to "1"	
FSV1[4]	SA4	set to "0"	—	
FSV1[5]	SA5	set to "0"	set to "1"	
FSV1[6]	SA6	set to "0"	set to "1"	
FSV1[7]	SA7	set to "0"	set to "1"	
FSV1[15:8]	—	—	—	not available

Note: It is mandatory to always set the sector where the Flash Security Vectors FSV1 and FSV2 are located to write protected (here sector SA4). Otherwise it is possible to overwrite the Security Vector to a setting where it is possible to either read out the Flash content or manipulate data by writing.

See section “Flash access in CPU mode” for an overview about the sector organisation of the Flash Memory.

6.3. Security Vector FSV2

The setting of the Flash Security Vector FSV2 bits [31:0] is responsible for the individual write protection of the 64 KByte sectors. It is only evaluated if write protection bit FSV1[17] is set.

Explanation of the bits in the Flash Security Vector FSV2[31:0]

FSV2 bit	Sector	Enable Write Protection	Disable Write Protection	Comment
FSV2[0]	SA8	set to "0"	set to "1"	Sectors available on MB91F467Cx only
FSV2[1]	SA9	set to "0"	set to "1"	
FSV2[2]	SA10	set to "0"	set to "1"	
FSV2[3]	SA11	set to "0"	set to "1"	
FSV2[4]	SA12	set to "0"	set to "1"	Sectors available on MB91F467Cx and MB91F465CA
FSV2[5]	SA13	set to "0"	set to "1"	
FSV2[6]	SA14	set to "0"	set to "1"	
FSV2[7]	SA15	set to "0"	set to "1"	
FSV2[8]	SA16	set to "0"	set to "1"	Sectors available on MB91F467Cx, MB91F465CA, MB91F463CA
FSV2[9]	SA17	set to "0"	set to "1"	
FSV2[10]	SA18	set to "0"	set to "1"	
FSV2[11]	SA19	set to "0"	set to "1"	
FSV2[12]	SA20	set to "0"	set to "1"	Sectors available on MB91F467Cx only
FSV2[13]	SA21	set to "0"	set to "1"	
FSV2[14]	SA22	set to "0"	set to "1"	
FSV2[15]	SA23	set to "0"	set to "1"	
FSV2[31:16]	—	set to "0"	set to "1"	Sectors not available

Note : See section "Flash access in CPU mode" for an overview about the sector organisation of the Flash Memory.

■ MEMORY SPACE

The FR family has 4 Gbytes of logical address space (2^{32} addresses) available to the CPU by linear access.

- Direct addressing area

The following address space area is used for I/O.

This area is called direct addressing area, and the address of an operand can be specified directly in an instruction.

The size of directly addressable area depends on the length of the data being accessed as shown below.

Byte data access : 000_{H} to $0FF_{\text{H}}$

Half word access : 000_{H} to $1FF_{\text{H}}$

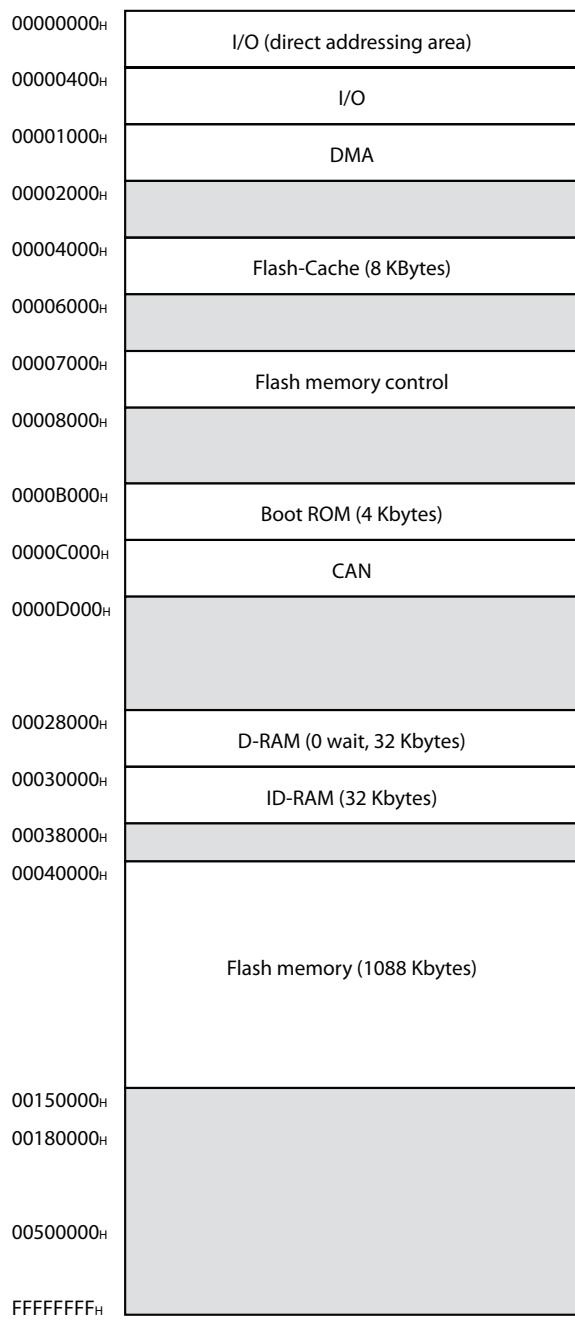

Word data access : 000_{H} to $3FF_{\text{H}}$

Notes:

^{*1} The Interrupt Control Registers (ICRs) are located in the interrupt controller and set the interrupt level for each interrupt request. An ICR is provided for each interrupt request.

^{*2} The vector address for each EIT (exception, interrupt or trap) is calculated by adding the listed offset to the table base register value (TBR). The TBR specifies the top of the EIT vector table. The addresses listed in the table are for the default TBR value (0x000FFC00). The TBR is initialized to this value by a reset. After execution of the internal boot ROM TBR is set to 0x000FFC00.

^{*3} Used by REALOS

^{*4} ICR23 and ICR47 can be exchanged by setting the REALOS compatibility bit (addr 0x0C03 : IOS[0])

^{*5} System reserved

^{*6} Memory Protection Unit (MPU) support

■ RECOMMENDED SETTINGS

1. PLL and Clockgear settings

Please note that for MB91F460C series the core base clock frequencies are valid in the 1.8V operation mode of the Main regulator and Flash .

Recommended PLL divider and clockgear settings

PLL Input (CLK) [MHz]	Frequency Parameter		Clockgear Parameter		PLL Output (X) [MHz]	Core Base Clock [MHz]	Remarks
	DIVM	DIVN	DIVG	MULG			
4	2	25	16	24	200	100

4	12	3	16	32	144	12	

2. Clock Modulator settings

The following table shows all possible settings for the Clock Modulator in a base clock frequency range from 32MHz up to 88MHz.

The Flash access time settings need to be adjusted according to Fmax while the PLL and clockgear settings should be set according to base clock frequency.

Clock Modulator settings, frequency range and supported supply voltage

■ ELECTRICAL CHARACTERISTICS

1. Absolute maximum ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply slew rate	—	—	50	V/ms	
Power supply voltage 1* ¹	V _{DD5R}	−0.3	+6.0	V	
Power supply voltage 2* ¹	V _{DD5}	−0.3	+6.0	V	
Power supply voltage 3* ¹	HV _{DD5}	−0.3	+6.0	V	
Relationship of the supply voltages	HV _{DD5}	V _{DD5} -0.3	V _{DD5} +0.3	V	SMC mode
		V _{SS5} -0.3	V _{DD5} +0.3	V	General purpose port mode
	AV _{CC5}	V _{DD5} -0.3	V _{DD5} +0.3	V	At least one pin of the Ports 25 to 29 (SMC, ANn) is used as digital input or output.
		V _{SS5} -0.3	V _{DD5} +0.3	V	All pins of the Ports 25 to 29 (SMC, ANn) follow the condition of V _{IA}
Analog power supply voltage* ¹	AV _{CC5}	−0.3	+6.0	V	*2
Analog reference power supply voltage* ¹	AVRH	−0.3	+6.0	V	*2
Input voltage 1* ¹	V _{I1}	V _{SS5} − 0.3	V _{DD5} + 0.3	V	
Input voltage 3* ¹	V _{I3}	HV _{SS5} − 0.3	HV _{DD5} + 0.3	V	Stepper motor controller
Analog pin input voltage* ¹	V _{IA}	AV _{SS5} − 0.3	AV _{CC5} + 0.3	V	
Output voltage 1* ¹	V _{O1}	V _{SS5} − 0.3	V _{DD5} + 0.3	V	
Output voltage 3* ¹	V _{O3}	HV _{SS5} − 0.3	HV _{DD5} + 0.3	V	Stepper motor controller
Maximum clamp current	I _{CLAMP}	−4.0	+4.0	mA	*3
Total maximum clamp current	$\Sigma I_{CLAMP} $	—	20	mA	*3
“L” level maximum output current* ⁴	I _{OL}	—	10	mA	
		—	40	mA	Stepper motor controller
“L” level average output current* ⁵	I _{OLAV}	—	8	mA	
		—	30	mA	Stepper motor controller
“L” level total maximum output current	ΣI_{OL}	—	100	mA	
		—	360	mA	Stepper motor controller
“L” level total average output current* ⁶	ΣI_{OLAV}	—	50	mA	
		—	230	mA	Stepper motor controller
“H” level maximum output current* ⁴	I _{OH}	—	−10	mA	
		—	−40	mA	Stepper motor controller
“H” level average output current* ⁵	I _{OHAV}	—	−4	mA	
		—	−30	mA	Stepper motor controller
“H” level total maximum output current	ΣI_{OH}	—	−100	mA	
		—	−360	mA	Stepper motor controller

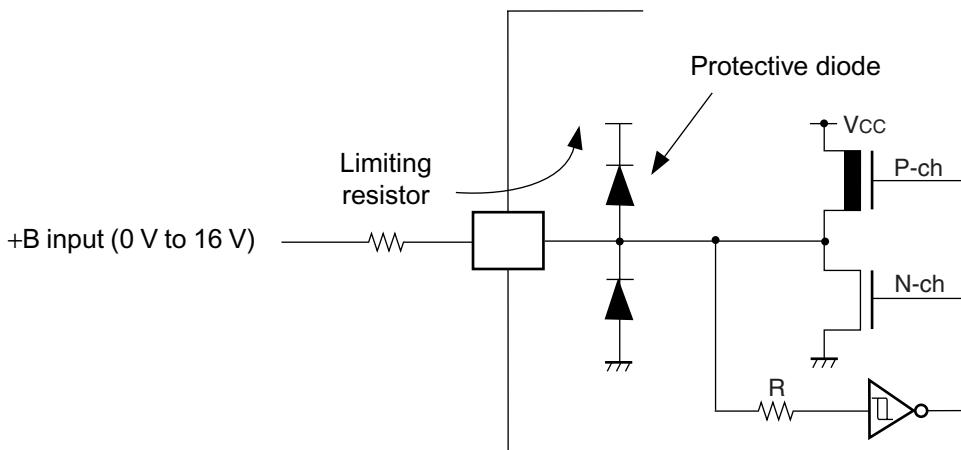

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
"H" level total average output current* ⁶	ΣI_{OHAV}	—	- 25	mA	
		—	- 230	mA	Stepper motor controller
Power consumption	P _D	—	1000	mW	
Operating temperature	T _A	- 40	+ 105	°C	
Storage temperature	T _{tsg}	- 55	+ 150	°C	

*1 : The parameter is based on V_{SS5} = HV_{SS5} = AV_{SS5} = 0.0 V.

*2 : AV_{CC5} and AVR_{H5} must not exceed V_{DD5} + 0.3 V.

- *3 :
 - Use within recommended operating conditions.
 - Use with DC voltage (current).
 - +B signals are input signals that exceed the V_{DD5} voltage. +B signals should always be applied by connecting a limiting resistor between the +B signal and the microcontroller.
 - The value of the limiting resistor should be set so that the current input to the microcontroller pin does not exceed the rated value at any time, either instantaneously or for an extended period, when the +B signal is input.
 - Note that when the microcontroller drive current is low, such as in the low power consumption modes, the +B input potential can increase the potential at the power supply pin via a protective diode, possibly affecting other devices.
 - Note that if the +B signal is input when the microcontroller is off (not fixed at 0 V), power is supplied through the +B input pin; therefore, the microcontroller may partially operate.
 - Note that if the +B signal is input at power-on, since the power is supplied through the pin, the power-on reset may not function in the power supply voltage.
 - Do not leave +B input pins open.
 - Example of recommended circuit :

- Input/output equivalent circuit

*4 : Maximum output current is defined as the value of the peak current flowing through any one of the corresponding pins.

*5 : Average output current is defined as the value of the average current flowing through any one of the corresponding pins for a 100 ms period.

*6 : Total average output current is defined as the value of the average current flowing through all of the corresponding pins for a 100 ms period.

MB91460C Series PRELIMINARY

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

2. Recommended operating conditions

$(V_{ss5} = AV_{ss5} = 0.0 \text{ V})$

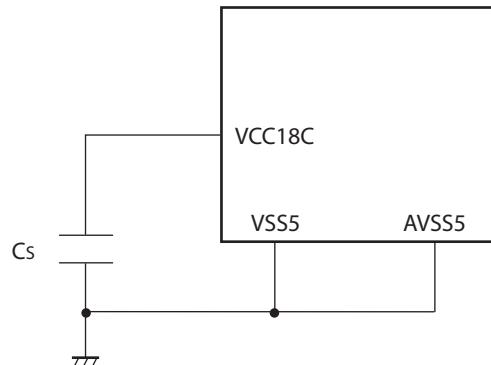

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Power supply voltage	V_{DD5}	3.0	—	5.5	V	
	V_{DD5R}	3.0	—	5.5	V	Internal regulator
	HV_{DD5}	4.5	—	5.5	V	Stepper motor controller
		3.0	—	5.5	V	Stepper motor controller (when all pins are used as general-purpose ports)
	AV_{cc5}	3.0	—	5.5	V	A/D converter
Smoothing capacitor at VCC18C pin	C_s	—	4.7	—	μF	Use a X7R ceramic capacitor or a capacitor that has similar frequency characteristics.
Power supply slew rate		—	—	50	V/ms	
Operating temperature	T_A	– 40	—	+ 105	°C	
Stepper motor control slew rate			40		ns	$C_{load} = 0 \text{ pF}$
Main Oscillation stabilisation time		10			ms	
Look-up time PLL (4 MHz → 16 ... 100MHz)				0.6	ms	
ESD Protection (Human body model)	V_{surge}	2			kV	$R_{discharge} = 1.5\text{k}\Omega$ $C_{discharge} = 100\text{pF}$
RC Oscillator	$f_{RC100\text{kHz}}$ $f_{RC2\text{MHz}}$	50 1	100 2	200 4	kHz MHz	$V_{DD\text{CORE}} \geq 1.65\text{V}$

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

MB91460C Series PRELIMINARY

3. DC characteristics

Note: In the following tables, "V_{DD}" means HV_{DD5} for SMC pins or V_{DD5} for other pins.

In the following tables, "V_{ss}" means Hvss5 for ground Pins of the stepper motor and V_{ss5} for the other pins.

(V_{DD5} = AV_{CC5} = 3.0 V to 5.5 V, V_{ss5} = AV_{SS5} = 0 V, T_A = -40 °C to + 105 °C)

Parameter	Symbol	Pin name	Condition	Value			Unit	Remarks
				Min	Typ	Max		
Input "H" voltage	V _{IH}	—	Port inputs if CMOS Hysteresis 0.8/0.2 input is selected	0.8 × V _{DD}	—	V _{DD} + 0.3	V	CMOS hysteresis input

Parameter	Symbol	Pin name	Value			Unit	Remarks
			Min	Typ	Max		
Reference voltage range	AVRH	AVRH5	0.75 × AVcc5	—	AVcc5	V	
	AVRL	AVss5	AVss5	—	AVcc5 × 0.25	V	
Power supply current per ADC macro * ³	I _A	AVcc5	—	2.5	5	mA	A/D Converter active
	I _{AH}	AVcc5	—	—	5	μA	A/D Converter not operated * ¹
Reference voltage current per ADC macro * ³	I _R	AVRH5	—	0.7	1	mA	A/D Converter active
	I _{RH}	AVRH5	—	—	5	μA	A/D Converter not operated * ²

*¹ : Supply current at AVcc5, if A/D converter and ALARM comparator are not operating,
 $(V_{DD5} = AVcc5 = AVRH = 5.0 \text{ V})$

*² : Input current at AVRH5, if A/D converter is not operating, $(V_{DD5} = AVcc5 = AVRH = 5.0 \text{ V})$

*³ : The current consumption per ADC macro is given here. On devices having more than one A/D converter, the current values have to be multiplied by the number of macros.

Sampling Time Calculation

$$T_{\text{samp}} = (2.6 \text{ kOhm} + R_{\text{EXT}}) \times 11\text{pF} \times 7; \text{ for } 4.5\text{V} \leq AVcc5 \leq 5.5\text{V}$$

$$T_{\text{samp}} = (12.1 \text{ kOhm} + R_{\text{EXT}}) \times 11\text{pF} \times 7; \text{ for } 3.0\text{V} \leq AVcc5 \leq 4.5\text{V}$$

Conversion Time Calculation

$$T_{\text{conv}} = T_{\text{samp}} + T_{\text{comp}}$$

Definition of A/D converter terms

- Resolution

Analog variation that is recognizable by the A/D converter.

- Nonlinearity error

Deviation between actual conversion characteristics and a straight line connecting the zero transition point ($00\ 0000\ 0000_B \leftrightarrow 00\ 0000\ 0001_B$) and the full scale transition point ($11\ 1111\ 1110_B \leftrightarrow 11\ 1111\ 1111_B$).

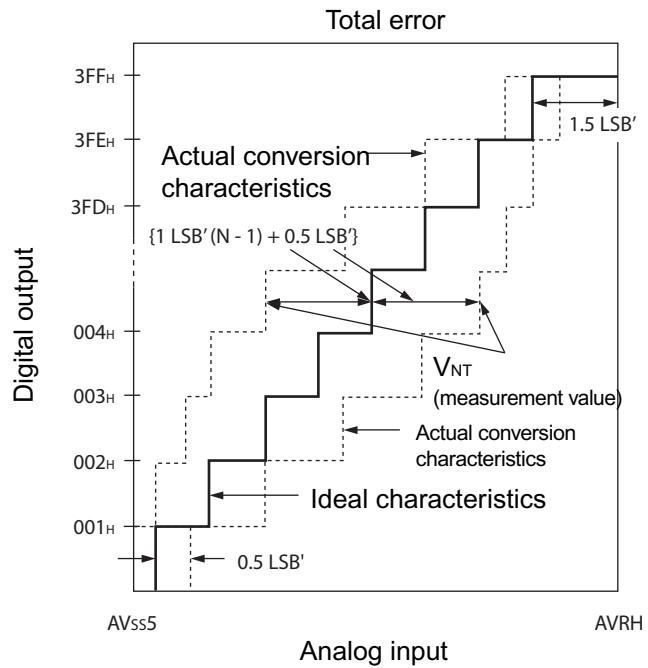

- Differential nonlinearity error

Deviation of the input voltage from the ideal value that is required to change the output code by 1 LSB.

- Total error

This error indicates the difference between actual and theoretical values, including the zero transition error, full scale transition error, and nonlinearity error.

MB91460C Series PRELIMINARY

$$1\text{LSB}' \text{ (ideal value)} = \frac{\text{AVRH} - \text{AV}_{ss5}}{1024} \text{ [V]}$$

$$\text{Total error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB}' \times (N - 1) + 0.5 \text{ LSB}'\}}{1 \text{ LSB}'} \text{ [V]}$$

N : A/D converter digital output value

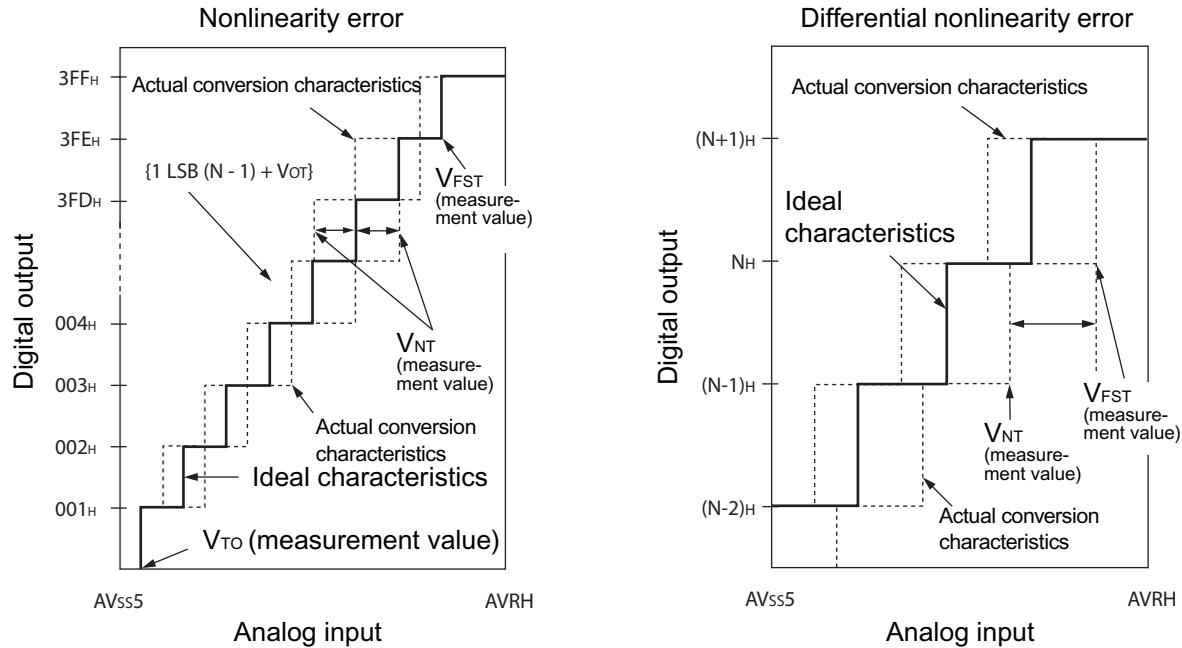

$$V_{ot}' \text{ (ideal value)} = \text{AV}_{ss5} + 0.5 \text{ LSB}' \text{ [V]}$$

$$V_{fst}' \text{ (ideal value)} = \text{AVRH} - 1.5 \text{ LSB}' \text{ [V]}$$

V_{NT} : Voltage at which the digital output changes from $(N + 1)_H$ to N_H

(Continued)

(Continued)

$$\text{Nonlinearity error of digital output } N = \frac{V_{NT} - \{1\text{LSB} \times (N - 1) + V_{OT}\}}{1\text{LSB}} \text{ [LSB]}$$

$$\text{Differential nonlinearity error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1\text{LSB}} - 1 \text{ [LSB]}$$

$$1\text{LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ [V]}$$

N : A/D converter digital output value

V_{OT} : Voltage at which the digital output changes from 000_H to 001_H.

V_{FST} : Voltage at which the digital output changes from 3FE_H to 3FF_H.

MB91460C Series PRELIMINARY

5. Alarm comparator characteristics

Parameter	Symbol	Pin name	Value			Unit	Remarks
			Min	Typ	Max		
Power supply current	I _{A5ALMF}	AV _{cc5}	—	25	40	µA	Alarm comparator enabled in fast mode (per channel) *1

Serial clock “L” pulse width	t_{LSLSE}	SCKn		$t_{CLKP} + 10$	—	$t_{CLKP} + 10$	—	ns
SCK $\downarrow \rightarrow$ SOT delay time	t_{SLOVE}	SCKn SOTn		—	$2 t_{CLKP} + 55$	—	$2 t_{CLKP} + 45$	ns
Valid SIN \rightarrow SCK \uparrow setup time	t_{IVSHE}	SCKn SINn		10	—	10	—	ns
SCK $\uparrow \rightarrow$ valid SIN hold time	t_{SHIXE}	SCKn SINn		$t_{CLKP} + 10$	—	$t_{CLKP} + 10$	—	ns
SCK rising time	t_{FE}	SCKn		—	20	—	20	ns
SCK falling time	t_{RE}	SCKn		—	20	—	20	ns

* : Parameter m depends on t_{SCYCI} and can be calculated as :

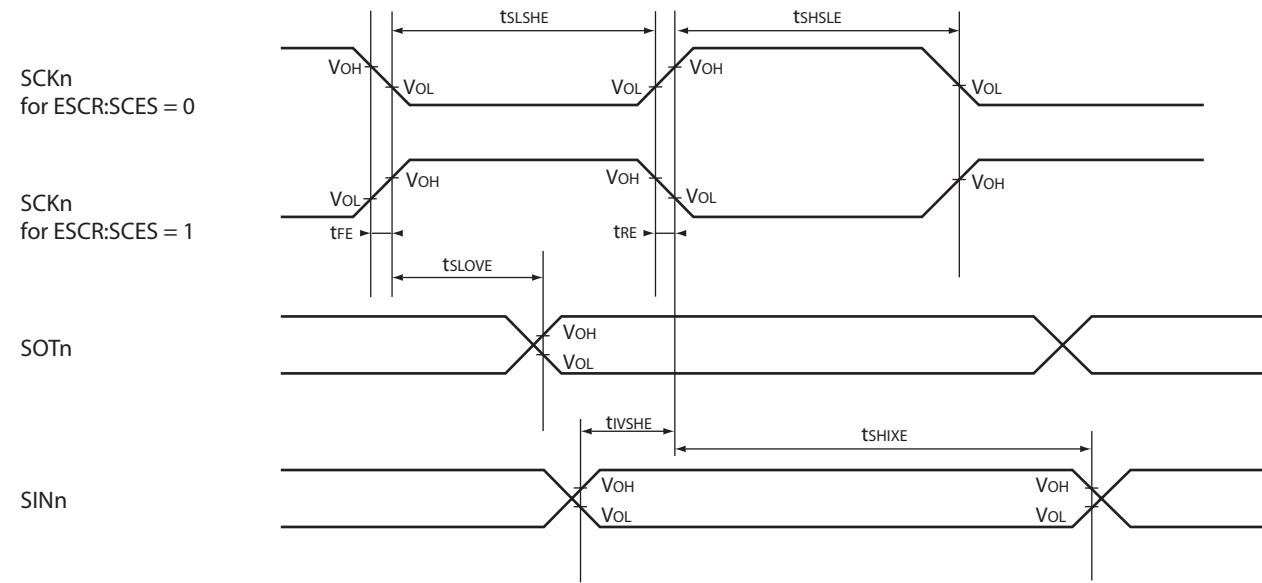

- if $t_{SCYCI} = 2^*k*t_{CLKP}$, then $m = k$, where k is an integer > 2
- if $t_{SCYCI} = (2^*k + 1)*t_{CLKP}$, then $m = k + 1$, where k is an integer > 1

Notes : • The above values are AC characteristics for CLK synchronous mode.
 • t_{CLKP} is the cycle time of the peripheral clock.

- Internal clock mode (master mode)

- External clock mode (slave mode)

7.4. I²C AC Timings at V_{DD5} = 3.0 to 5.5 V

- Conditions during AC measurements

All AC tests were measured under the following conditions:

- IO_{drive} = 3 mA
- V_{DD5} = 3.0 V to 5.5 V, I_{load} = 3 mA (V_{DD} = 4.5 V to 5.5 V for MB91F467Cx)
- V_{SS5} = 0 V
- Ta = -40 °C to +105 °C
- C_I = 50 pF
- VOL = 0.3 × V_{DD5}
- VOH = 0.7 × V_{DD5}
- EPILR = 0, PILR = 0 (CMOS Hysteresis 0.3 × V_{DD5}/0.7 × V_{DD5})

Fast mode:

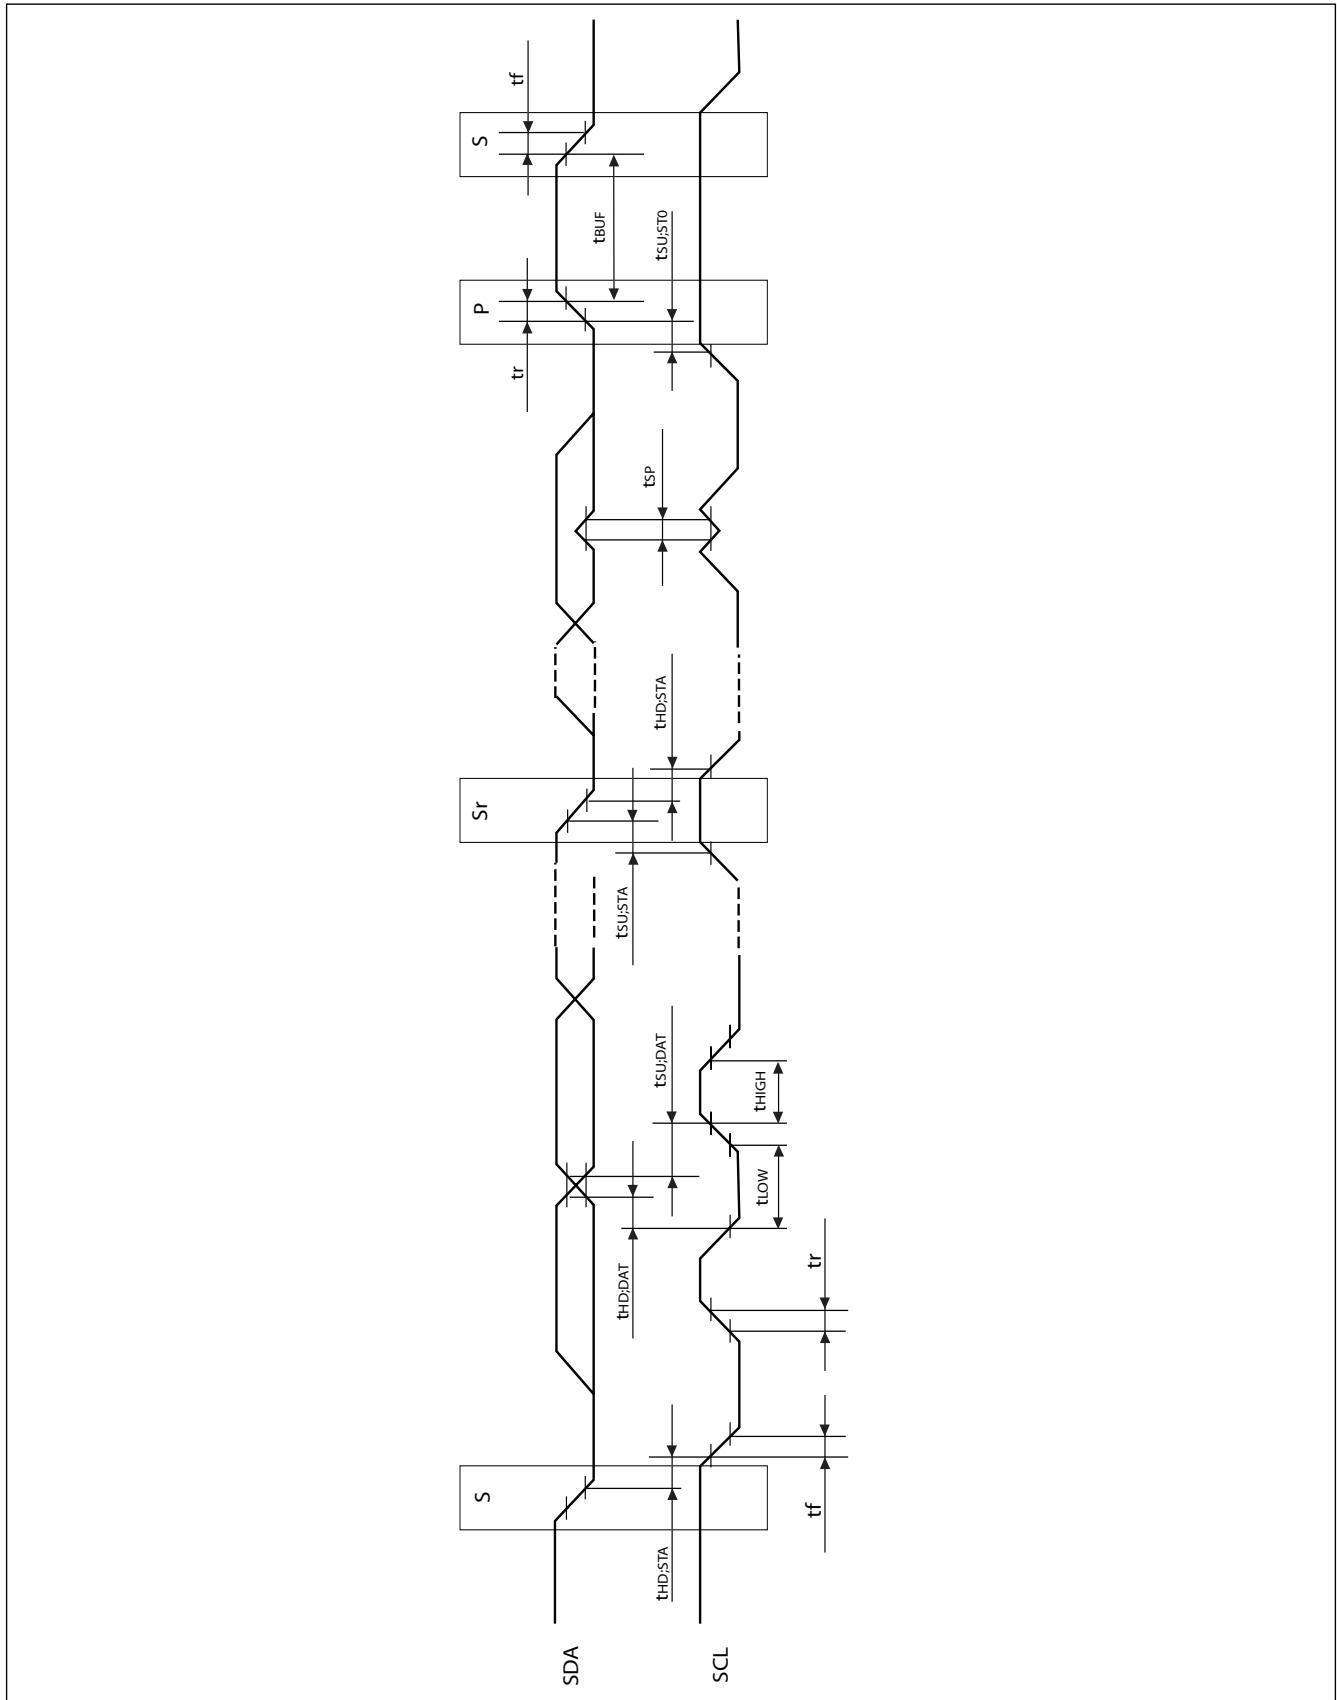

(V_{DD5} = 3.5 V to 5.5 V, V_{SS5} = AV_{SS5} = 0 V, T_A = -40 °C to +105 °C)

Parameter	Symbol	Pin name	Value		Unit	Remark
			Min	Max		
SCL clock frequency	f _{SCL}	SCLn	0	400	kHz	
Hold time (repeated) START condition. After this period, the first clock pulse is generated	t _{HD;STA}	SCLn, SDAn	0.6	—	μs	
LOW period of the SCL clock	t _{LOW}	SCLn	1.3	—	μs	
HIGH period of the SCL clock	t _{HIGH}	SCLn	0.6	—	μs	
Setup time for a repeated START condition	t _{SU;STA}	SCLn, SDAn	0.6	—	μs	
Data hold time for I ² C-bus devices	t _{HD;DAT}	SCLn, SDAn	0	0.9	μs	
Data setup time	t _{SU;DAT}	SCLn SDAn	100	—	ns	
Rise time of both SDA and SCL signals	t _r	SCLn, SDAn	20 + 0.1Cb	300	ns	*1
Fall time of both SDA and SCL signals	t _f	SCLn, SDAn	20 + 0.1Cb	300	ns	*1
Setup time for STOP condition	t _{SU;STO}	SCLn, SDAn	0.6	—	μs	
Bus free time between a STOP and START condition	t _{BUF}	SCLn, SDAn	1.3	—	μs	
Capacitive load for each bus line	C _b	SCLn, SDAn	—	400	pF	
Pulse width of spike suppressed by input filter	t _{SP}	SCLn, SDAn	0	(1..1.5) × t _{CLKP}	ns	*2

*1 On MB91F467Cx only guaranteed for 4.5 V < V_{DD5} < 5.5 V.

*2 The noise filter will suppress single spikes with a pulse width of 0 ns and between (1 to 1.5) cycles of peripheral clock, depending on the phase relationship between I²C signals (SDA, SCL) and peripheral clock.

Note: t_{CLKP} is the cycle time of the peripheral clock.

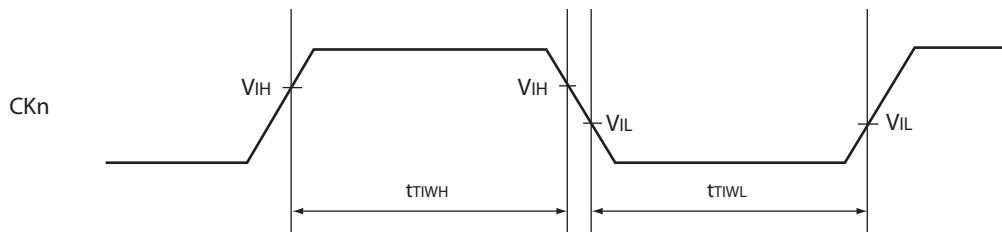

MB91460C Series PRELIMINARY

7.5. Free-run timer clock

($V_{DD5} = 3.0 \text{ V to } 5.5 \text{ V}$, $V_{SS5} = AV_{SS5} = 0 \text{ V}$, $T_A = -40 \text{ }^\circ\text{C to } +105 \text{ }^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit
				Min	Max	
Input pulse width	t_{TIWH} t_{TIWL}	CKn	—	$4t_{CLKP}$	—	ns

Note : t_{CLKP} is the cycle time of the peripheral clock.

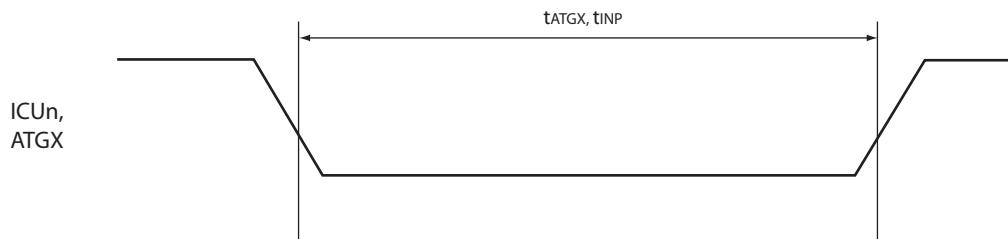

7.6. Trigger input timing

($V_{DD5} = 3.0 \text{ V to } 5.5 \text{ V}$, $V_{SS5} = AV_{SS5} = 0 \text{ V}$, $T_A = -40 \text{ }^\circ\text{C to } +105 \text{ }^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Unit
				Min	Max	
Input capture input trigger	t_{INP}	ICUn	—	$5t_{CLKP}$	—	ns
A/D converter trigger	t_{ATGX}	ATGX	—	$5t_{CLKP}$	—	ns

Note : t_{CLKP} is the cycle time of the peripheral clock.

■ ORDERING INFORMATION

Part number	Package	Remarks
MB91F467CAPMC-GSE2		not recommended
MB91F467CBPMCR-GSE2		Lead-free package
MB91F465CAPMC-GSE2	144-pin plastic LQFP (FPT-144P-M08)	Lead-free package
MB91F463CAPMC-GSE2		Lead-free package

■ REVISION HISTORY

Version	Date	Remark
2.0	2008-04-16	Initial Version
2.1	2008-08-15	<p>Handling devices: Section Notes on PS Register changed for better understanding;</p> <p>Interrupt Vector Table: corrected the footnotes</p> <p>FLASH: Added note about the flash operation mode switching; added section "Poweron Sequence in parallel programming mode";</p> <p>FLASH Security: Corrected sector assignments FSV1,FSV2</p> <p>Absolute maximum ratings: Removed the note that analog input/output pins cannot accept +B signal input.</p> <p>DC Characteristics: Updated PullUp/Down resistors and the footnotes, splitted I_{LV} into external and internal LV detection</p> <p>AD Converter characteristics updated (complete section);</p> <p>Ordering information updated;</p> <p>Company name updated</p>
2.2	2008-11-24	<p>Flash: Added MB91F463CA to all sections</p> <p>Memory maps: Removed external bus areas (no ext. bus available)</p> <p>IO-Map: Added/corrected MB91F463CA</p> <p>Ordering Information: Added MB91F463CA</p>

FUJITSU MICROELECTRONICS LIMITED

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

Exportation/release of any products described in this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.

The company names and brand names herein are the trademarks or registered trademarks of their respective owners.
