## 3.3V ECL Differential Receiver

### Description

The MC100LVEL16 is a differential receiver. The device is functionally equivalent to the EL16 device, operating from a 3.3 V supply. The LVEL16 exhibits a wider  $V_{IHCMR}$  range than its EL16 counterpart. With output transition times and propagation delays comparable to the EL16 the LVEL16 is ideally suited for interfacing with high frequency sources at 3.3 V supplies.

Under open input conditions, the Q input will be pulled down to  $V_{EE}$  and the  $\bar{Q}$  input will be biased to  $V_{CC}/2$ . This condition will force the Q output low.

The  $V_{BB}$  pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to  $V_{BB}$  as a switching reference voltage.  $V_{BB}$  may also rebias AC coupled inputs. When used, decouple  $V_{BB}$  and  $V_{CC}$  via a 0.01  $\mu\text{F}$  capacitor and limit current sourcing or sinking to 0.5 mA. When not used,  $V_{BB}$  should be left open.
