MC14582B

Look-Ahead Carry Block

The MC14582B is a CMOS look–ahead carry generator capable of anticipating a carry across four binary adders or groups of adders. The device is cascadable to perform full look–ahead across n–bit adders. Carry, generate–carry, and propagate–carry functions are provided as enumerated in the pin designation table shown below.

- Expandable to any Number of Bits
- All Buffered Outputs
- Low Power Dissipation
- Diode Protection on All Inputs
- Supply Voltage Range = 3.0 Vdc to 18 Vdc
- Capable of Driving Two Low–power TTL Loads or One Low–Power Schottky TTL Load over the Rated Temperature Range

** The formulas given are for the typical characteristics only at 25° C.

†To calculate total supply current at loads other than 50 pF:

$$I_T(C_L) = I_T(50\ pF) + (C_L - 50)\ Vfk$$

where: I_T is in µA (per package), C_L in pF, V = (V_{DD} – V_{SS}) in volts, f in kHz is input frequency, and k = 0.005.

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V_{in} and V_{out} should be constrained to the range $V_{SS} \le (V_{in}$ or $V_{out}) \le V_{DD}$.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either V_{SS} or V_{DD}). Unused outputs must be left open.
