MC33076

Dual High Output Current, Low Power, Low Noise Bipolar Operational Amplifier

The MC33076 operational amplifier employs bipolar technology with innovative high performance concepts for audio and industrial applications. This device uses high frequency PNP input transistors to improve frequency response. In addition, the amplifier provides high output current drive capability while minimizing the drain current. The all NPN output stage exhibits no deadband crossover distortion, large output voltage swing, excellent phase and gain margins, low open loop high frequency output impedance and symmetrical source and sink AC frequency performance.

The MC33076 is tested over the automotive temperature range and is available in an 8-pin SOIC package (D suffix) and in both the standard 8 pin DIP and 16-pin DIP packages for high power applications.

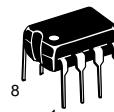

- 100 Ω Output Drive Capability
- Large Output Voltage Swing
- Low Total Harmonic Distortion
- High Gain Bandwidth: 7.4 MHz
- High Slew Rate: 2.6 V/ μ s
- Dual Supply Operation: ± 2.0 V to ± 18 V
- High Output Current: ISC = 250 mA typ
- Similar Performance to MC33178

ORDERING INFORMATION

Device	Operating Temperature Range	Package
MC33076D		SO-8
MC33076P1	TA = -40° to +85°C	Plastic DIP
MC33076P2		Power Plastic

MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Power Supply Voltage (Note 2)	V_{CC} to V_{EE}	+36	V
Input Differential Voltage Range	V_{IDR}	(Note 1)	V
Input Voltage Range	V_{IR}	(Note 1)	V
Output Short Circuit Duration (Note 2)	t_{SC}	5.0	sec
Maximum Junction Temperature	T_J	+150	°C
Storage Temperature	T_{stg}	-60 to +150	°C
Maximum Power Dissipation	P_D	(Note 2)	mW

NOTES: 1. Either or both input voltages should not exceed V_{CC} or V_{EE} .

2. Power dissipation must be considered to ensure maximum junction temperature (T_J) is not exceeded (see power dissipation performance characteristic, Figure 1).

See applications section for further information.

APPLICATIONS INFORMATION

The MC33076 dual operational amplifier is available in the standard 8-pin plastic dual-in-line (DIP) and surface mount packages, and also in a 16-pin batwing power package. To enhance the power dissipation capability of the power package, Pins 4, 5, 12, and 13 are tied together on the leadframe, giving it an ambient thermal resistance of 52°C/W

typically, in still air. The junction-to-ambient thermal resistance ($R_{\theta JA}$) can be decreased further by using a copper pad on the printed circuit board (as shown in Figure 26) to draw the heat away from the package. Care must be taken not to exceed the maximum junction temperature or damage to the device may occur.
