

**Low-Voltage CMOS 18-Bit
 Universal Bus Transceiver**
With 5V-Tolerant Inputs and Outputs
(3-State, Non-Inverting)

The MC74LCX16500 is a high performance, non-inverting 18-bit universal bus transceiver operating from a 2.7 to 3.6V supply. This part is not byte controlled; it is "18-bit" controlled. High impedance TTL compatible inputs significantly reduce current loading to input drivers while TTL compatible outputs offer improved switching noise performance. A V_I specification of 5.5V allows MC74LCX16500 inputs to be safely driven from 5V devices. The MC74LCX16500 is suitable for memory address driving and all TTL level bus oriented transceiver applications.

Data flow in each direction is controlled by Output Enable (OEAB, OEBA), Latch Enable (LEAB, LEBA) and Clock inputs (CAB, CBA). When LEAB is HIGH, the A-to-B dataflow is transparent. When LEAB is LOW, and CAB is held at LOW or HIGH, the data A is latched; on the HIGH-to-LOW transition of CAB the A-data is stored in the latch/flip-flop. The outputs are active when OEAB is HIGH. When OEAB is LOW the B-outputs are in 3-state. Similarly, the LEBA, OEBA and CBA control the B-to-A dataflow. Please note that the output enables are complementary; OEAB is active HIGH, OEBA is active LOW.

- Designed for 2.7 to 3.6V V_{CC} Operation
- 6ns Maximum t_{pd}
- 5V Tolerant — Interface Capability With 5V TTL Logic
- Supports Live Insertion and Withdrawal
- I_{OFF} Specification Guarantees High Impedance When $V_{CC} = 0V$
- LVTTTL Compatible
- LVCMOS Compatible
- 24mA Balanced Output Sink and Source Capability
- Near Zero Static Supply Current in All Three Logic States (20 μ A) Substantially Reduces System Power Requirements
- Latchup Performance Exceeds 500mA
- ESD Performance: Human Body Model >2000V; Machine Model >200V
