

DATA-SHEET

# MCS3AO

# 3-element colour sensor – TO5 with optics

### FUNCTION

The colour sensors are made of 3 Si-PIN photo diodes integrated on chip. They are carried out as segments of a ring with the diameter of 2,0 mm. The design as Si-PIN photo diodes allows signal frequencies up to MHz-range. In order to achieve a small cross talk between the photodiodes the individual sectors were separated from each other by additional structures. Each of these photodiodes is sensitised with dielectric spectral filter for its colour range, preferably for the primary colours red, green and blue.

#### **APPLICATION**

- Quality control
- Monitoring the production
- Control of manufacturing
- Detection of colour marks

## **FEATURES**

Dielectric filters guaranties the good optical properties of the colour sensors, such as:

- high transmission
- slight aging of the filter
- high temperature stability
- high signal frequency
- reduced cross talk
- small size (diameter of the optical sensitive surface ca. 2 mm)

#### CONSTRUCTION

- 3 on chip integrated PIN photo diodes
- package version TO5, with optical lense
- dielectric filters for the three colour ranges: red, green and blue
- Electrical connections
  - three anodes
  - one common cathode

 $(T_A = 25^{\circ}C; \text{ per single diode})$ 

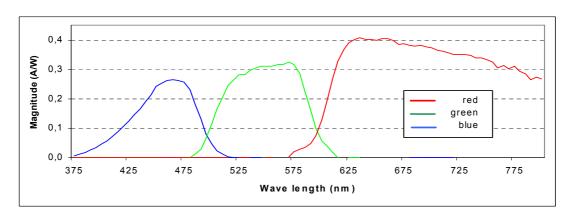

Storage temperature range

The optical lens allows the light collection at a acceptance angle width from 25°. In this case, the optimal work distance is 2 to 6 cm. The use of greater work distances is to be adapted by larger illumination intensity level.

# APPLICATION CIRCUIT

Opposite figure shows a circuit for the conversion of photo current to an equivalent voltage. These voltage can be processed e.g. with an ADC. By the selection of suitable resistors the output voltage range can be adjusted to the photo current value. (for example the pin-programmable transimpedance amplifier MTI04 with the resistors  $25k\Omega$ ,  $500k\Omega$ 

$$R_x \approx \frac{V_{Out}}{I_{Photo}}$$
 and 5M $\Omega$ )

#### **APPLICATION NOTE**

It is recommended to use an IR-block filter > 720nm (MCS3BT) or a light source with low infrared radiation for optimal operations of the colour sensor.

#### **ORDERING INFORMATION**

Colour sensor with TO5-package with optical lense (plastic) Evaluation board for JENCOLOUR sensors
