

1. General Description

This ROM-Based 8-bit micro-controller uses a fully static CMOS technology process to achieve higher speed and smaller size with the low power consumption and high noise immunity. On chip memory includes 4K words of ROM, and 192 bytes of static RAM.

www.DataSheet4U.com

2. Features

- ◆ RISC CPU
- ◆ Fully static design
- ◆ 37 single word instructions
- ◆ 4K x 14 program memory.
- ◆ 192 bytes RAM for data
- ◆ 35 bi-directional I/O
- ◆ Eight level hardware stacks
- ◆ Watchdog timer with on-chip RC oscillator.
- ◆ Interrupt capability
- ◆ Timer0 : 8-bit timer with 8-bit prescaler
- ◆ Timer1 : 8-bit timer with 8-bit compare register. This timer can be used as carrier generator.
- ◆ Sleep mode for power saving.
- ◆ PB and PD with port change wake-up interrupt.

3. Applications

The application areas of this MDT10C65 range from appliance motor control and high speed automotive to low power remote transmitters/receivers and tele-communications processors, such as Remote controller, small instruments, toy, automobile and keyboard ..etc.

5. Pin function description

Pin name	Type	Buffer type	Description
OSC1	I		Oscillator input
OSC2	O		Oscillator out
/RES	I	ST	Reset input with 130K ohm pull-up
PA0 PA1 PA2 PA3 PA4 PA5 PA6 PA7	I/O I/O I/O I/O I/O I/O I/O I/O	TTL TTL TTL TTL ST TTL TTL TTL	Bi-directional I/O port A. Port A can be software programmed for internal 45K ohm pull-up on all pins except PA5. The pull-up resistance on PA5 is 100K ohm. Can be clock input to Timer0.
PB0/IQR PB1 PB2 PB3 PB4 PB5 PB6 PB7	I/O I/O I/O I/O I/O I/O I/O I/O	ST/TTL TTL TTL TTL TTL TTL TTL TTL	Bi-directional I/O port B. Port B can be software programmed for internal 25K ohm pull-up on all pins. PB0-PB7 can generate interrupt on pin state change. Can be the external interrupt pin.
PC0 PC1 PC2 PC3 PC4 PC5 PC6 PC7	I/O I/O I/O I/O I/O I/O I/O I/O	ST ST ST ST ST ST ST ST	Bi-directional I/O port C. Port C can be software programmed for internal 100K pull-up on all pins. Can be Timer1 oscillator output or Timer1 clock input. Can be Timer1 oscillator input.
PD0-PD7	I/O	ST	Bi-directional port. All pins can generate interrupt on pin state change. Port D can be software programmed for internal 100K pull-up on all pins.
PE0 PE1 PE2	I/O I/O I/O	ST ST ST	Bi-directional port E. Port E can be software programmed for internal 100K pull-up on all pins.
Vdd			Power input
Vss			Ground pin

■ Unimplemented memory location.

00	Indirect addressing register
01	Timer0 register
02	Program counter low byte
03	Status register
	Bit 0 : Carry
	1 : Digit carry
	2 : Zero flag
	3 : Power-down
	4 : WDT time-out
	5 : Register bank select (For direct addressing)
	=0 Bank 0 (00h-7Fh)
	=1 Bank 1 (80h-FFh)
	7-6 : Always read as zero.
04	Memory select register
05	Port A data register
06	Port B data register
07	Port C data register
08	Port D data register
09	Port E data register
	Bit 2-0 – Port E data register.
	7-3 – Unimplemented. Always set as 0.
0A	Program memory segment register
0B	Interrupt control register
	Bit 0 – PB port change interrupt flag bit.
	1 – PB0/IRQ external interrupt flag bit.
	2 – Timer0 overflow interrupt flag bit.
	3 – PB port change interrupt enable bit.
	4 – PB0/IRQ external interrupt enable bit.
	5 – Timer0 overflow interrupt enable bit.
	6 – Peripheral interrupt enable bit.
	7 – Global interrupt enable bit.
0C	Peripheral interrupt flag register 1.
	Bit 0 – Timer1 overflow interrupt flag bit
	7-1 – Unimplemented. Always read as 0.
0D	Peripheral interrupt flag register 2.
	Bit 6-0 – Unimplemented. Read as zero.
	7 – PD port change interrupt flag bit
0E	Timer1 data register low byte.
0F	Unimplemented..

- 10 Timer1 control register
 Bit 0 – Timer1 enable bit
 1 – Timer1 clock source select
 2 – Timer 1 external clock synchronization control bit
 3 – Timer 1 oscillator enable control bit
 5-4 – Timer 1 prescaler select bits
 7-6 – Unimplemented. Always read as 0.
- 11-14 Unimplemented.
- 15 Timer1 compare register
- 16 Unimplemented.
- 17 Timer1 compare control register
 Bit 7-1 – Unimplemented. Always set as 0.
 0 – compare enable bit
- 18-1F Unimplemented.
- 20-7F General purpose register
- 80 Same as register 00.
- 81 TMR register
 Bit 2-0 – Prescaler rate select bits
 3 – Prescaler assign bit
 4 – Timer 0 edge select bit
 5 – Timer 0 clock source select bit
 6 – PB0/IRQ interrupt edge select bit
 7 – Port B pull-up enable bit.
- 82-84 Same as 02H-04H.
- 85 Port A data direction register.
- 86 Port B data direction register.
- 87 Port C data direction register.
- 88 Port D data direction register.
- 89 Port E data direction register.
 Bit 2-0 – Port E data direction register.
 7-3 – Unimplemented. Always set as 0.
- 8A -8B Same as 0AH-0BH.
- 8C Peripheral interrupt control register 1.
 Bit 0 – Timer1 overflow interrupt enable bit.
 7-1 – Unimplemented. Always set these bits to 0.
- 8D Peripheral interrupt control register 2
 Bit 6-0 – Unimplemented.
 7 – PD port change interrupt enable bit.
- 8E Power control register.

Bit 0 – Unimplemented. Always read as 0.
 1 – Power-on reset status bit.
 7-2 – Unimplemented. Always read as 0.

8F Unimplemented.

90 PPHE register . (“ 0 ” Enable ; “ 1 ” Disable)

Bit 0-3 – Unimplemented.

4 – PA port pull-up enable bit.

5 – PC port pull-up enable bit.

6 – PD port pull-up enable bit.

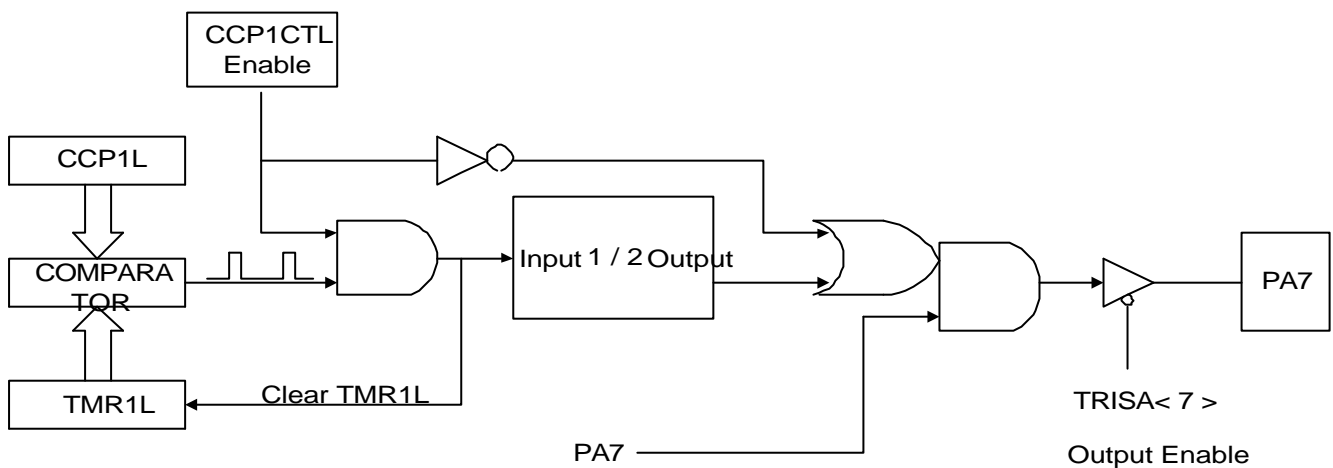

7 – PE port pull-up enable bit.

91-9F Unimplemented.

A0-FF General purpose register.
