

**P-Channel 60V (D-S) MOSFET**

**GENERAL DESCRIPTION**

The ME2309 is the P-Channel logic enhancement mode power field effect transistors are produced using high cell density, DMOS trench technology. This high density process is especially tailored to minimize on-state resistance. These devices are particularly suited for low voltage application such as cellular phone and notebook computer power management and other battery powered circuits where high-side switching and low in-line power loss are needed in a very small outline surface mount package.

**PIN CONFIGURATION**

P-Channel MOSFET

**FEATURES**

- $R_{DS(ON)} \leq 215m\Omega @ V_{GS} = -10V$
- $R_{DS(ON)} \leq 260m\Omega @ V_{GS} = -4.5V$
- Super high density cell design for extremely low  $R_{DS(ON)}$
- Exceptional on-resistance and maximum DC current capability

**APPLICATIONS**

- Power Management in Note book
- Portable Equipment
- Battery Powered System
- DC/DC Converter
- Load Switch
- DSC
- LCD Display inverter

Ordering Information: ME2309(Pb-free)

ME2309-G (Green product-Halogen free)

**Absolute Maximum Ratings** ( $T_A = 25^\circ C$  Unless Otherwise Noted)

| Parameter                               |                    | Symbol          | Maximum Ratings | Unit         |
|-----------------------------------------|--------------------|-----------------|-----------------|--------------|
| Drain-Source Voltage                    |                    | $V_{DS}$        | -60             | V            |
