MILITARY STANDARD

SCREWS AND BOLTS PREFERRED FOR DESIGN, LISTING OF

FSC 5305
FSC 5306

DEPARTMENT OF DEFENSE
Washington, DC 20301

Screws and Bolts Preferred for Design, Listing of

MIL-STD-1251A

1. This Military Standard is approved for use by all Departments and Agencies of the Department of Defense.

2. Beneficial comments (recommendations, additions, deletions) and any pertinent data which may be of use in improving this document should be addressed to: Commander, US Army Armament Research and Development Command, ATTN: DRDAR-TST-S, Dover, NJ 07801 by using the self-addressed Standardization Document Improvement Proposal (DD Form 1426) appearing at the end of this document or by letter.

FOREWORD

1. The purpose of this bookform standard is to provide a commodity type parts document on screws and bolts to aid military equipment designers and engineers in the selection of preferred screws and bolts.

2. This document consists of an index of preferred standardization documents and a listing of preferred parts within these documents that have been selected with respect to configuration, sizes, lengths, materials, and finishes for screws and bolts.

3. The selection of preferred documents listed in this standard and the selection of part numbers within the preferred documents were made as follows:

a. Selection of Documents

(1) Documents listed or scheduled for listing in the Department of Defense Index of Specifications and Standards (DODISS).

(2) Documents which are active for design.

(3) Documents specifying part numbers (dash numbers) which designate specific sizes, materials and finishes.

b. Selection of Part Numbers

(1) By conducting a thorough search and evaluation of existing DOD procurement information.

(2) By evaluation of preferred parts listed in recent weapon system contracts.

(3) By evaluation of preferred parts lists obtained from industry.

4. To increase the scope and versatility of this screws and bolts standard, periodic revisions will be developed. Results from Standardization studies, MILITARY PARTS CONTROL ADVISORY GROUP (MPCAG) evaluations, evaluation of a new family of screws and bolts and recommendations from interested activities will form the basis for these revisions.

5. The following issued military standards cover other preferred for design standard parts:

MIL-STD-1598	-	Studs, Preferred for Design, Listing of
MIL-STD-1754	-	Fastening Devices, Preferred for Design, Listing of
MIL-STD-1755	-	Keys and Pins, Preferred for Design, Listing of
MIL-STD-1756	-	Rings, Retaining, Preferred for Design, Listing of
MIL-STD-1759	-	Rivets and Rivet Type Fasteners, Preferred for Design, Listing of
MIL-STD-1758	-	Inserts, Screw Thread, Preferred for Design, Listing of
MIL-STD-1762	-	Bearings and Bushings, Plain, Preferred for Design, Listing of
MIL-STD-1764	-	Washers, Preferred for Design, Listing of

SECTIONS - Continued

1. SCOPE

1.1 Scope. This standard provides a listing of preferred screws and bolts encompassing the following characteristics.

a. Configuration

b. Size

c. Materials

d. Protective Coatings and Finishes

1.2 Purpose. The purpose of this standard is as follows:

a. Provide the designer with a listing of preferred screws and bolts to promote their use in design of weapon systems and equipment.

b. Control and minimize the variety of screws and bolts and in military equipment thereby facilitating logistic support of the equipment during its life cycle.

1.3 Application. To minimize the proliferation of screws and bolts, only the preferred part numbers listed herein are authorized for use in new design. All other part numbers, even though shown on current Military Specification Sheets, Military Standards (MS), National Aerospace Standards (NAS), Aeronautical Standards (AS), and Air Force Navy Aeronautical Standards (AN), are not approved for use in new design unless approved by cognizant Government procuring activity.

1.4 Intended use. Implement this standard by including one of the following options in the standard:

a. Require this standard as a supplement to an end use type standard such as MIL-STD-1471 or MIL-STD-1515. When thus required, only the screws and bolts listed in both the end use type and this standard are acceptable. Use of other screws and bolts requires approval of the Government procuring activity.

b. Require this standard as a guide to be used with an end use type standard such as MIL-STD-1471 or MIL-STD-1515. When thus required, the screws and bolts listed in the end use type standard and this standard are acceptable. The designer must assure himself the screws and bolts listed in both the end use type standard and this standard are not adequate for his requirements before using screws and bolts not listed herein. Use of screws and bolts not listed in the end use type standard requires approval of the Government procuring activity.

c. Require this standard and indicate exceptions to it. When thus required, only the screws and bolts listed in this standard and not excluded by the exceptions are acceptable. Use of other screws and bolts requires the approval of the Government procuring activity.

d. Require this standard as a guide. When thus required, the designer must assure himself the screws and bolts listed in this standard are not adequate for the requirement before using other screws and bolts.

2. REFERENCED DOCUMENTS

2.1 Issues of Documents. The following documents of the issue in effect on date of invitation for bids or request for proposal form a part of this standard to the extent specified herein.

(Application for copies should be addressed to the Aerospace Industries Association of America, Inc., 1725 DeSales Street, Washington, DC 20036.)

(Technical society and technical association specifications and standards are generally available for reference from libaries. They are also distributed among technical groups and using Federal agencies).

3. DEFINITIONS

3.1 Adopted Industry Standards. Any Industry Specification or Standard which is listed in this Standard/The Department of Defense Index of Specifications and Standards. (DODISS).

3.2 Commodity Type Document. A document which lists preferred parts within a Federal Supply Classification class or Item Name. This document is to be used for selecting preferred parts for a new design when the document is invoked as a contractual requirement in conjunction with a parts control requirement.

3.3 End Use Type Document. A document that lists preferred documents and establishes parts requirements which are contractually binding for the design and construction/manufacture of a weapon system or an established equipment category such as MIL-STD-1515.

3.4 Military Parts Control Advisory Group (MPCAG). A Department of Defense organization which provides advice to the Military Departments and military contractors on the selection of parts in assigned commodity classes, and collects data on nonstandard parts for developing or updating military specifications and standards.

3.5 Approved Item Names. Approved item names used in this standard are defined in the following paragraphs corresponding to the section numbers:

(100) BOLT, CLEVIS. An externally threaded fastener whose threaded and unthreaded portions are of one nominal diameter and are separated by a narrow circumferential groove. The head has a recess for holding or driving.

(200) BOLT, CLOSE TOLERANCE. An externally threaded fastener whose unthreaded portion is of a specified grip length and is machined to a tolerance of .001 inch or less. Items over 1.000 inch in diameter shall have a tolerance of .0015 inch or less. The nominal major diameter of the threads shall be at least .001 inch below the minimum shank diameter, but not below the minimum major diameter for applicable class of fit, as shown in FED-STD-H28. The head is designed for external wrenching. The minimum tensile strength shall be less than 160,000 pounds per square inch.

(300) BOLT, EYE. An externally threaded device whose threaded portion is of one nominal diameter, without a head, but with the unthreaded end either bent more than 225 degrees or cast, forged, or punched to resemble an eye.

(400) BOLT, HOOK. An externally threaded device whose threaded portion is of one nominal diameter, without a head but with the unthreaded end bent not over 225 degrees.

(500) BOLT, INTERNAL WRENCHING. An externally threaded fastener whose threaded portion is of one nominal diameter. The head is beveled (conical) in shape and has an internal socket for internal wrenching.

(600) BOLT, LAG. An externally threaded fastener having a square or hexagon head and with a continuous thread (wood screw type or fetter drive type) extending from a gimlet or cone point for a distance of slightly more than one-half the length of the bolt.

(700) BOLT, MACHINE. An externally threaded fastener whose threaded and unthreaded portions are each of one nominal diameter, .190 inch or larger. The length of the unthreaded portion (of hexagon head fasteners) is controlled and is machined to a tolerance greater than that specified for BOLT, CLOSE TOLERANCE. The head is designed for external wrenching only. If head also contains recess, slot or socket, use SCREW, MACHINE.

(800) BOLT, SELF-LOCKING. A BOLT, MACHINE or SCREW, CAP, HEXAGON HEAD with the added characteristic of a locking feature incorporated in the design of the head or in the threads.

(900) BOLT, SHEAR. A BOLT, CLOSE TOLERANCE except that item is fabricated from material having a minimum tensile strength of 160,000 pounds per square inch or greater.

(1000) BOLT, SHOULDER. A BOLT, MACHINE or SCREW, CAP HEXAGON HEAD that has a round unthreaded neck or shank, all or part of which is of greater diameter than the threaded portion.

(1100) BOLT, SQUARE NECK. A headed externally threaded fastener whose threaded portion if of one nominal diameter, with a square neck directly beneath the head.

(1200) BOLT, TEE HEAD. An externally threaded fastener whose threaded portion is of one nominal diameter and with a head specifically designed to fit in a slot and hold against turning.

(1300) BOLT, U. An externally threaded fastener bent approximately 180 degrees in the shape of the letter U and with both ends threaded.

(1400) SCREW, CAP, HEXAGON HEAD. A BOLT, MACHINE, HEXAGON HEAD except that the length of the unthreaded portion is not controlled.

(1500) SCREW, CAP, SOCKET HEAD. An externally threaded fastener whose threaded portion is of one nominal diameter. The head is cylindrical in shape and has an internal socket or multiple spline for use with an inserted driver. Excludes items with bevel (conical) heads.

(1600) SCREW, CLOSE TOLERANCE. A BOLT, CLOSE TOLERANCE except that the head has an internal socket, recess, or slot and the minimum tensile strength may be any value.

(1700) SCREW, DRIVE. A hardened cylindrical fastener with multiple spiral flutes on its shank. It also has an end smaller in diameter than the outside diameter of the spiral flutes, which acts as a pilot when driven into a drilled hole.

(1800) SCREW, EYE. A fastening device with one end formed in the shape of an eye and the other end threaded with a lag or wood screw type of thread.

(1900) SCREW, INSTRUMENT. A SCREW, MACHINE except that the thread diameter is less than .060 inch.

(2000) SCREW, MACHINE. An externally threaded fastener whose threaded portion is of one nominal diameter. The unthreaded portion has a tolerance greater than that specified for BOLT, CLOSE TOLERANCE. For thread sizes .060 thru .164 inch, any head may be used except SCREW, CAP, SOCKET HEAD or BOLT, INTERNAL WRENCHING. For thread sizes .190 and larger, any recess, slot or socket (except SCREW, CAP, SOCKET HEAD, or BOLT, INTERNAL WRENCHING) head may be used.

(2100) SCREW, SELF-LOCKING. A SCREW, MACHINE or SCREW, CAP, SOCKET HEAD with the added characteristic of a locking feature incorporated in the design of the head or in the threads.

(2200) SCREW, SHOULDER. A SCREW, MACHINE except that it has a round unthreaded neck or shank, all or part of which is of greater diameter than the threaded portion.

(2300) SCREW, TAPPING, THREAD CUTTING. A hardened externally threaded fastener whose thread extends from a tapered end to the bearing surface of the head and is interrupted by flutes or slots to permit cutting its own mating thread.

(2400) SCREW, TAPPING THREAD FORMING. A hardened externally threaded fastener whose thread usually extends from a gimlet or dog type point to the bearing surface of the head and designed to form its own mating thread.

(2500) SCREW, WOOD. A unhardened externally threaded fastener whose continuous thread extends from a gimlet point for a distance of approximately two-thirds of the length of the screw and which is designed to be driven with an inserted driver.

(2600) SETSCREW. An externally threaded device whose threaded portion is one of nominal diameter with or without a head and having a cup, cone or other type of machined point designed to prevent or restrict relative movement of parts and designed to be driven with either a wrench or inserted driver.

(2700) THUMBSCREW. An externally threaded fastener whose threaded portion is of one nominal diameter. It may have an unthreaded portion with a diameter less than, equal to, or greater than the diameter of the threaded portion. It has either a vertically flattened, circular knurled, or wing type head, all of which are designed for rotation by the thumb and fingers. For items having wrenching facilities such as socket recess, multiple spline, or slot heads, use SCREW (as modified) or BOLT (as modified).

3.6 Modifiers. Modifiers added to the approved item names used in this standard are as follows:

a. FULL SHANK. The diameter of the unthreaded portion is nominally the same as the major diameter of the thread.

b. PD SHANK. The diameter of the unthreaded portion is nominally the same as the pitch diameter of the thread.

c. FULL THREAD. Fastener is threaded as close to the head as practicable for all lengths.

d. LONG THREAD. Minimum thread length is twice the diameter plus .25 inch or greater, but not fully threaded for all lengths.

e. SHORT THREAD. Minimum thread length is less than twice the diameter plus .25 inch.

f. NON-LOCKING. As used in this standard is interchangeable with plain.

3.7 Overlapping definitions. Due to the overlapping definitions for screws and bolts, table I may be used as a guide when searching for a particular item.

TABLE I. Essential differences between overlapping approved item names for screws and bolts.

Head styles	Shank dia tolerance	Tensile strength (ksi) min	Thread dia nom	Grip length of hexagon head fasteners	Approved item name	Section number
Recess, slot, or socket	.001 or <	AV	All		Screw, Close Tolerance	1600
External wrenching (only)	.001 or <	< 160	All		Bolt, Close Tolerance	201
External wrenching (only)	.001 or <	160 or >	All		Bolt, Shear	900
External wrenching (only)	> .001	AV	.190 or >	Controlled	Bolt, Machine 1/, 2/	700
Any head	> .001	AV	< .060		Screw Instrument	1900
Any head	> .001	AV	.060 thru .164		Screw, Machine 3/, 4/	2000
Recess, slot, or socket (except those listed below)	> .001	AV	.190 or >		Screw, Machine 3/, 4/	2000
Hexagon	> .001	AV	.190 or >	Not Controlled	Screw, Cap, Hexagon Head 1/, 2/	1400
Cylindrical containing a socket	> .001	AV	All		Screw, Cap, Socket Head 3/	150
Conical containing a socket	> .001	AV	All		Bolt, Internal Wrenching	500

For notes 1/, 2/, 3/, 4/ and Symbols, see page 26

1/ If part contains locking feature, use "Bolt, Self-Locking" (Section 800).
2/ If part contains shoulder, use "Bolt, Shoulder" (Section 1000).
3/ If part contains locking feature, use "Screw; Self-Locking" (Section 2100).
4/ If part contains shoulder, use "Screw, Shoulder" (Section 2200).

Symbols:

$\geqslant$	Greater than
$\leqslant$	Less than
AV	Any value

4. GENERAL STATEMENTS

4.1 Selection procedure.

4.1.1 Document selection. The applicable section shall be selected after reviewing the definitions in 3.5 thru 3.7 and the table of contents.

4.1.2 Part number selection (preliminary). A preliminary selection of the applicable part number shall be made after reviewing the nominal parameters (sizes, materials, shear and tensile strength) listed in the sections.

4.1.3 Part number selection (final). A final selection of the applicable part number shall be made after reviewing the detailed requirements specified in the referenced documents for suitability in the particular military equipment being designed (considering the application and environmental conditions).

5. DETAILED REQUIREMENTS

5.1 The detailed requirements for preferred screws and bolts are contained in the applicable screws and bolts document and associated procurement specification. If there is disagreement between the nominal parameters listed in this standard and the parameters specified in the applicable screws and bolts document or associated procurement specification, the parameters specified in the applicable screws and bolts document or associated procurement specification shall prevail.

6. NOTES

6.1 Dimensions. Dimensions shown in the sections contained herein are in inches.

6.2 Unified standard screw threads used in this standard are listed in table II.

TABLE II. Unified standard screw threads.

6.3 Unified miniature screw threads used in this standard are listed in table III.

TABLE III. Unified miniature screw threads (UNM).

Thread size (mm)	Threads per inch	Basic major diameter (inches)
.30 UNM	318	.0118
.40 UNM	254	.0157
.50 UNM	203	.0197
.60 UNM	169	.0236
.80 UNM	127	.0315
1.00 UNM	102	.0394
1.20 UNM	102	.0472

6.4 Decimal equivalents rounded to three decimal places used in this standard to specify dimensions.

TABLE IV. Decimal equivalents (except for thread sizes).

3/4----------.750	

6.5 Code letters. Generally code letters used in this standard to indicate material are placed as prefix of dash number (in place of first dash), and all other codes are placed as suffix of dash numbers.

6.5.1 When multiple code letters are used as suffix, they are arranged in alphabetical order.

6.6 Tensile strength. Tensile strength as used in this standard is ultimate tensile strength. Figure 1 may be used to determine approximate tensile strength when tensile loads are listed for various threaded fastener sizes.

6.7 Changes from previous issue. Asterisks are not used in this revision to identify changes with respect to the previous issue, due to the extensiveness of the changes.

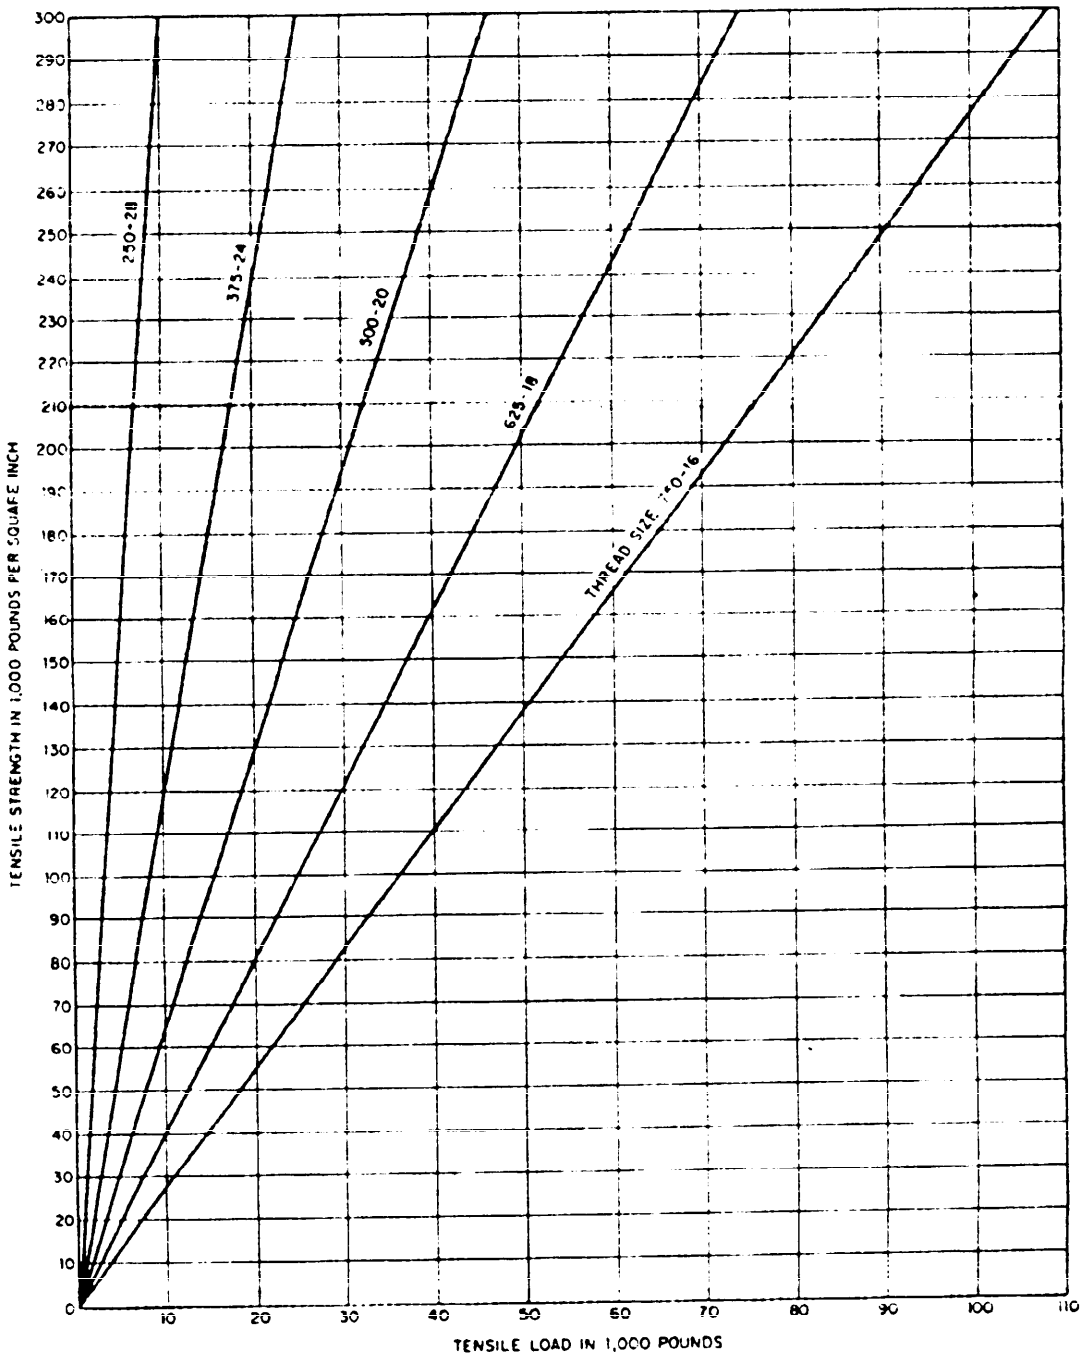

Figure 1. Tensile strength vs. Tensile Load for various threaded fastener sizes

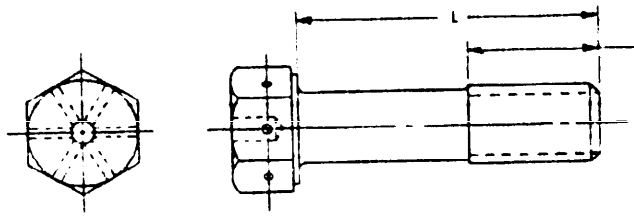
SECTION 707
BOLTS, MACHINE, HEXAGON HEAD, PD SHANK, LONG THREAD, DRILLED HEAD, THREE HOLES
APPLICABLE DOCUMENTS: MS9440, 9441, 9442, 9443, 9445, 9447, 9448, 9957, 9958, 9959, 9960, 9962, 9964, 9965



MINIMUM THREAD LENGTH IS TWICE THE BASIC DIAMETER PLUS 0.25 INCH. BOLTS TOO SHORT TO APPLY THIS FORMULA ARE THREADED AS CLOSE TO THE HEAD AS PRACTICABLE.

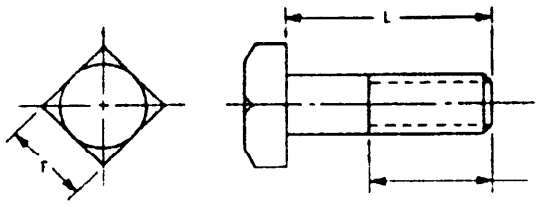
SECTION 700
BOLTS, MACHINE, SQUARE HEAD
APPLICABLE DOCUMENT: MS35355



MINIMUM THREAD LENGTH IS TWICE THE BASIC DIAMETER PLUS 0.25 INCH. BOLTS TOO SHORT TO APPLY THIS FORMULA ARE THREADED AS CLOSE TO THE HEAD AS PRACTICABLE.

1/ Minimum thread length is twice the basic diameter plus 0.50 inch. Screws too short to apply this formula are threaded as close to the head as practicable.

2/ Screws 2.00 inches long or shorter are threaded to a maximum of two threads from the head. Longer screws have a minimum thread length of 1.50 inches.

3/ Screws 2.00 inches long or shorter are threaded to a maximum of two threads from the head. Longer screws have a minimum thread length of 1.75 inches.

STANDARDIZATION DOCUMENT IMPROVEMENT PROPOSAL

INSTRUCTIONS. This form is provided to solicit beneficial comments which may improve this document and enhance its use. DoD contractors, government activities, manufacturers, vendors, or other prospective users of the document are invited to submit comments to the government. Fold on lines on reverse side, staple in corner, and send to preparing activity. Attach any pertinent data which may be of use in improving this document. If there are additional papers, attach to form and place both in an envelope addressed to preparing activity. A response will be provided to the submitter, when name and address is provided, within 30 days indicating that the 1426 was received and when any appropriate action on it will be completed.
NOTE: This form shall not be used to submit requests for waivers, deviations or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.
