

TOTAL POWER INT'L

MIW3100 Series

5~6 Watts 2:1 Wide Input Range DC/DC Converters

Single and Dual Outputs

Key Features

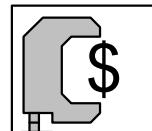

- High Efficiency up to 86%
- High Power Density
- 2:1 Input Range
- I/O Isolation 1500VDC
- Industry Standard Pinout
- SMT Technology
- Short Circuit Protection
- MTBF > 1,000,000 Hours

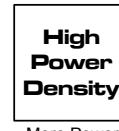

MIW3100-Series power modules are low-profile dc-dc converters that operate over input voltage ranges of 9–18VDC and 18–36VDC and provide precisely regulated output voltages of 3.3V, 5V, 12V, ±12V and ±15V.

The -40°C to $+71^{\circ}\text{C}$ operating temperature range makes it ideal for data communication equipments, mobile battery driven equipments, distributed power systems, telecommunication equipments, mixed analog/digital subsystems, process/machine control equipments, computer peripheral systems and industrial robot systems.

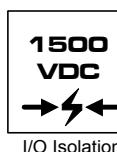

The modules have a maximum power rating of 6W and a typical full-load efficiency of 86%, continuous short circuit, add EN55022 level A conducted noise compliance minimize design-in time, cost and eliminate the need for external components.

Model Selection Guide

Model Number	Input Voltage	Output Voltage	Output Current		Input Current		Reflected Ripple Current	Efficiency @Max. Load
			Max.	Min.	@Max. Load	@No Load		
	VDC	VDC	mA	mA	mA (Typ.)	mA (Typ.)	mA(Typ.)	% (Typ.)
MIW3121	12 (9 ~ 18)	3.3	1200	60	429	20	25	77
MIW3122		5	1000	50	514			81
MIW3123		12	500	25	595			84
MIW3126		±12	±250	±12.5	595			84
MIW3127		±15	±200	±10	595			84
MIW3131	24 (18 ~ 36)	3.3	1200	60	209	5	15	79
MIW3132		5	1000	50	251			83
MIW3133		12	500	25	291			86
MIW3136		±12	±250	±12.5	291			86
MIW3137		±15	±200	±10	291			86

Note :

1. Specifications typical at $T_a=+25^\circ\text{C}$ resistive load, nominal input voltage, rated output current unless otherwise noted.
2. Transient recovery time is measured to within 1% error band for a step change in output load of 75% to 100%.
3. Ripple & Noise measurement bandwidth is 0–20 MHz.
4. These power converters require a minimum output loading to maintain specified regulation.
5. Operation under no-load conditions will not damage these devices; however they may not meet all listed specifications.
6. All DC/DC converters should be externally fused at the front end for protection.
7. Other input and output voltage may be available, please contact factory.
8. Specifications subject to change without notice.

Absolute Maximum Ratings

Parameter		Min.	Max.	Unit
Input Surge Voltage (1000 mS)	12VDC Input Models	-0.7	25	VDC
	24VDC Input Models	-0.7	50	VDC
Lead Temperature (1.5mm from case for 10 Sec.)		----	260	°C
Internal Power Dissipation		----	2,500	mW

Exceeding these values can damage the module. These are not continuous operating ratings.

Environmental Specifications

Parameter	Conditions	Min.	Max.	Unit

Test Configurations

Input Reflected-Ripple Current Test Setup

Input reflected-ripple current is measured with a inductor Lin (4.7uH) and Cin (220uF, ESR < 1.0Ω at 100 KHz) to simulate source impedance.

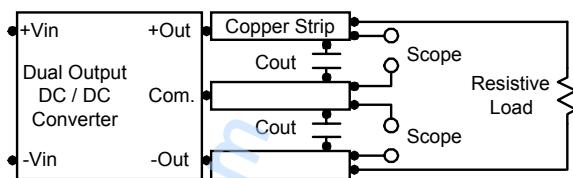

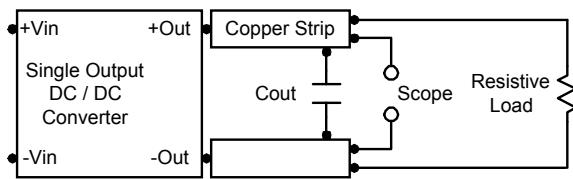

Capacitor Cin, offsets possible battery impedance.

Current ripple is measured at the input terminals of the module, measurement bandwidth is 0–500 KHz.

Peak-to-Peak Output Noise Measurement Test

Use a Cout 0.47uF ceramic capacitor.

Scope measurement should be made by using a BNC socket, measurement bandwidth is 0–20 MHz. Position the load between 50 mm and 75 mm from the DC/DC Converter.

Design & Feature Considerations

Maximum Capacitive Load

MIW3100 and MIW3100A series have limitation of maximum connected capacitance at the output.

The power module may be operated in current limiting mode during start-up, affecting the ramp-up and the startup time.

For optimum performance we recommend 1000uF maximum capacitive load for dual outputs and 6800uF capacitive load for single outputs.

The maximum capacitance can be found in the data.

Overcurrent Protection

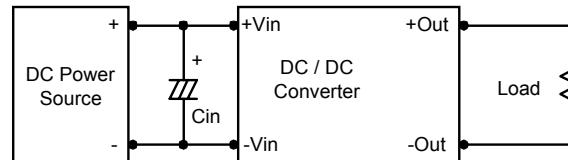

To provide protection in a fault (output overload) condition, the unit is equipped with internal current limiting circuitry and can endure current limiting for an unlimited duration. At the point of current-limit inception, the unit shifts from voltage control to current control. The unit operates normally once the output current is brought back into its specified range.

Input Source Impedance

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module.

In applications where power is supplied over long lines and output loading is high, it may be necessary to use a capacitor at the input to ensure startup.

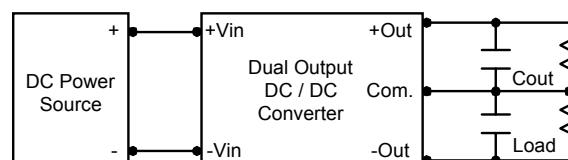

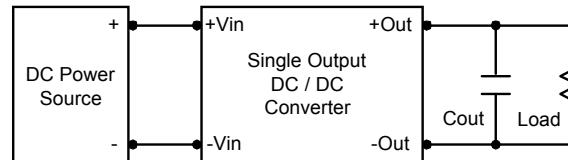

Capacitor mounted close to the power module helps ensure stability of the unit, it is recommended to use a good quality low Equivalent Series Resistance (ESR < 1.0Ω at 100 KHz) capacitor of a 3.3uF for the 12V input devices and a 2.2uF for the 24V devices.

Output Ripple Reduction

A good quality low ESR capacitor placed as close as practicable across the load will give the best ripple and noise performance.

To reduce output ripple, it is recommended to use 3.3uF capacitors at the output.

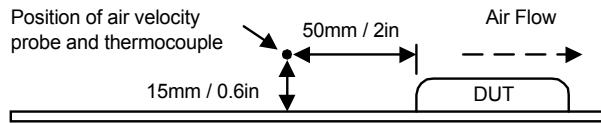

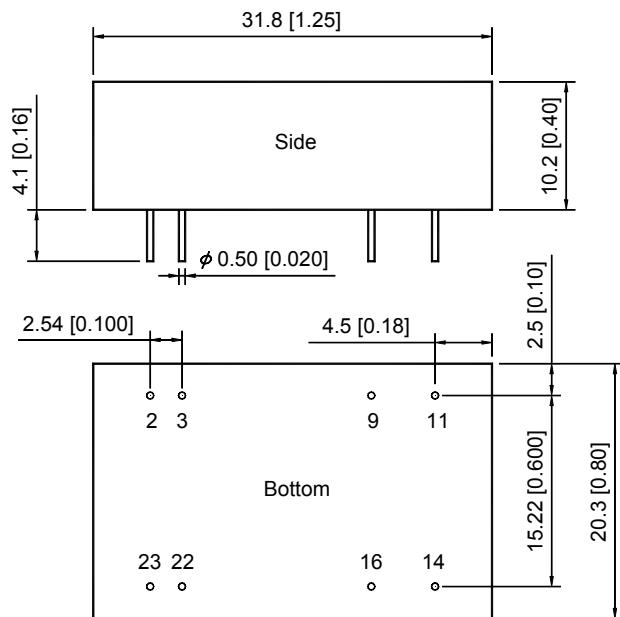

MIW3100 Series

Thermal Considerations

Many conditions affect the thermal performance of the power module, such as orientation, airflow over the module and board spacing. To avoid exceeding the maximum temperature rating of the components inside the power module, the case temperature must be kept below 90°C.

The derating curves are determined from measurements obtained in an experimental apparatus.

Connecting Pin Patterns

Top View (2.54 mm / 0.1 inch grids)

Single Output**Dual Output****Physical Characteristics**

Case Size : 31.8×20.3×10.2 mm
1.25×0.8×0.4 inches

Case Material : Metal With Non-Conductive Baseplate

Weight : 16.9g

Flammability : UL94V-0

Units are encapsulated in a low thermal resistance molding compound which has excellent chemical resistance and electrical properties in high humidity environment and over a wide operating temperature range.
The encapsulant and outer shell of the unit have UL94V-0 ratings. The leads are golden plated for better soldering.
