

# ML610Q418/ML610Q418C

8-bit Microcontroller with a Built-in LCD driver

## GENERAL DESCRIPTION

This LSI is a high-performance 8-bit CMOS microcontroller into which rich peripheral circuits, such as synchronous serial port, UART, I2C bus interface (master), melody driver, battery level detect circuit, RC oscillation type A/D converter, and LCD driver, are incorporated around 8-bit CPU nX-U8/100.

The CPU nX-U8/100 is capable of efficient instruction execution in 1-instruction 1-clock mode by 3-stage pipe line architecture parallel processing. The Flash ROM that is installed as program memory achieves low-voltage low-power consumption operation (read operation) equivalent to mask ROM and is most suitable for battery-driven applications.

The on-chip debug function that is installed enables program debugging and programming.

## FEATURES

- CPU
  - 8-bit RISC CPU (CPU name: nX-U8/100)
  - Instruction system: 16-bit instructions
  - Instruction set: Transfer, arithmetic operations, comparison, logic operations, multiplication/division, bit manipulations, bit logic operations, jump, conditional jump, call return stack manipulations, arithmetic shift, and so on
  - Memory model : LARGE (see U8 instruction manual)
  - On-Chip debug function
  - Minimum instruction execution time
    - 30.5  $\mu$ s (@32.768 kHz system clock)
    - 0.244 $\mu$ s (@4.096 MHz system clock)
- Internal memory
  - Internal 128KByte Flash ROM (64K×16 bits) (including unusable 1KByte + 2Byte TEST area)
  - Internal 4KByte Data Flash (2K×16 bits)
  - Internal 4KByte Data RAM (4096×8 bits), 240×9bit Display Allocation RAM
- Interrupt controller
  - 1 non-maskable interrupt sources (Internal source: 1)
  - 22 maskable interrupt sources (Internal sources: 17, External sources: 5)
- Time base counter
  - Low-speed time base counter ×1 channel
    - Frequency compensation (Compensation range: Approx. -488ppm to +488ppm. Compensation accuracy: Approx. 0.48ppm)
  - High-speed time base counter ×1 channel
- Watchdog timer
  - Non-maskable interrupt and reset
  - Free running
  - Overflow period: 4 types selectable (125ms, 500ms, 2s, and 8s)
- Timers
  - 8 bits × 4 channels (Timer0-3: 16-bit x 2 configuration available by using Timer0-1 or Timer2-3)
  - Clock frequency measurement mode (in one channel of 16-bit configuration using Timer2-3)

- Capture
  - Time base capture × 2 channels (4096 Hz to 32 Hz)
- PWM
  - Resolution 16 bits × 1 channel
- Synchronous serial port
  - Master/slave selectable × 2 channel
  - LSB first/MSB first selectable
  - 8-bit length/16-bit length selectable
- UART
  - TXD/RXD × 2channel
  - Bit length, parity/no parity, odd parity/even parity, 1 stop bit/2 stop bits
  - Positive logic/negative logic selectable
  - Built-in baud rate generator
- I<sup>2</sup>C bus interface
  - Master function only
  - Fast mode (400 kbps@4MHz), standard mode (100 kbps@4MHz, 50kbps@500kHz)
- Melody driver
  - Scale: 29 types (Melody sound frequency: 508 Hz to 32.768 kHz)
  - Tone length: 63 types
  - Tempo: 15 types
  - Buzzer output mode (4 output modes, 8 frequencies, 16 duty levels)
- RC oscillation type A/D converter
  - 24-bit counter
  - Time division × 2 channels
- Successive approximation type A/D converter (SA-ADC)
  - 12-bit A/D converter
  - Input × 4 channels
- General-purpose ports
  - Input-only port × 6 channels (including secondary functions)
  - Output-only port × 3 channels (including secondary functions)
  - Input/output port
    - ML610Q418 : 18 channels (including secondary functions)
    - ML610Q418C : 26 channels (including secondary functions)

- LCD driver
  - Dot matrix can be supported.  
ML610Q418 : 192 dots max. (48 seg × 4 com)  
ML610Q418C : 160 dots max. (40 seg × 4 com)
  - 1/1 to 1/4 duty
  - 1/2, 1/3 bias (built-in bias generation circuit)
  - Frame frequency selectable: approx. 64Hz, 73Hz, 85Hz, and 102Hz
  - Bias voltage multiplying clock selectable (8 types)
  - LCD drive stop mode, LCD display mode, all LCDs on mode, and all LCDs off mode selectable
  - Programmable display allocation function
- Reset
  - Reset by the RESET\_N pin
  - Reset by power-on detection
  - Reset when oscillation stop of the low-speed clock is detected
  - Reset by low level detection (LLD)  
The voltage which is released from reset is selectable by the code-option: 1.1V, 1.8V (Max.)
  - Reset by the watchdog timer (WDT) 2<sup>nd</sup> overflow
- Power supply voltage detect function
  - Judgment voltages: One of 16 levels
  - Judgment accuracy: ±2% (Typ.)
- Clock
  - Low-speed clock: (This LSI cannot guarantee the operation without low-speed clock)  
Crystal oscillation (32.768 kHz)
  - High-speed clock:
    - Built-in RC oscillation (500kHz)
    - Built-in PLL oscillation (8.192 MHz ±2.5%), crystal/ceramic oscillation (4.096 MHz), external clock
  - Selection of high-speed clock mode by software:  
Built-in RC oscillation, built-in PLL oscillation, crystal/ceramic oscillation, external clock
- Power management
  - HALT mode: Instruction execution by CPU is suspended (peripheral circuits are in operating states).
  - STOP mode: Stop of low-speed oscillation and high-speed oscillation (Operations of CPU and peripheral circuits are stopped.)
  - Clock gear: The frequency of high-speed system clock can be changed by software (1/1, 1/2, 1/4, or 1/8 of the oscillation clock)
  - Block Control Function: Power down (reset registers and stop clock supply) the circuits of unused peripherals.
- Guaranteed operating range
  - Operating temperature: -20°C to 70°C
  - Operating voltage: V<sub>DD</sub> = 1.1V to 3.6V

- Product name – Supported Function

The line-up of the ML610Q418 is below.

| - Chip (Die) -   | ROM type  | Operating temperature | LCD driver                        | Product availability |
|------------------|-----------|-----------------------|-----------------------------------|----------------------|
| ML610Q418-xxxWA  | Flash ROM | -20°C to +70°C        | 192 dots max.<br>(48 seg x 4 com) | Under construction   |
| ML610Q418C-xxxWA | Flash ROM | -20°C to +70°C        | 160 dots max.<br>(40 seg x 4 com) | Under construction   |

## ML610Q418 Chip Dimension

Chip size: 2.64 mm x 3.84 mm  
 PAD count: 100 pins  
 Minimum PAD pitch: 80 µm  
 PAD aperture: 70 µm x 70 µm  
 Chip thickness: 350 µm  
 Voltage of the rear side of chip: V<sub>SS</sub> level

Figure 5 ML610Q418 Chip Dimension

## ML610Q418C Chip Dimension

Chip size: 2.64 mm × 3.84 mm  
 PAD count: 100 pins  
 Minimum PAD pitch: 80 µm  
 PAD aperture: 70 µm × 70 µm  
 Chip thickness: 350 µm  
 Voltage of the rear side of chip: V<sub>SS</sub> level

## PIN DESCRIPTION

| Pin name                                 | I/O | Description   | Primary/<br>Secondary/<br>Tertiary | Logic    |
|--|-----|---|------------------------------------|----------|
| <b>System</b>                            |     |   |                                    |          |
| RESET_N                                  | I   | Reset input pin. When this pin is set to "L" level, system reset mode is set and the internal section is initialized. When this pin is set to "H" level subsequently, program execution starts. A pull-up resistor is internally connected.             | —                                  | Negative |
| XT0                                      | I   | Crystal connection pin for low-speed clock.   | —                                  | —        |
| XT1                                      | O   | A 32.768 kHz crystal oscillator (see measuring circuit 1) is connected to this pin. Capacitors CDL and CGL are connected across this pin and V <sub>SS</sub> as required.   | —                                  | —        |
| OSC0                                     | I   | Crystal/ceramic connection pin for high-speed clock.  | Secondary                          | —        |
| OSC1                                     | O   | A crystal or ceramic is connected to this pin (4.1 MHz max.). Capacitors CDH and CGH (see measuring circuit 1) are connected across this pin and V <sub>SS</sub> . This pin is used as the secondary function of the P10 pin (OSC0) and P11 pin (OSC1). | Secondary                          | —        |
| LSCLK                                    | O   | Low-speed clock output pin. This pin is used as the secondary function of the P20 pin.  | Secondary                          | —        |
| OUTCLK                                   | O   | High-speed clock output pin. This pin is used as the secondary function of the P21 pin.   | Secondary                          | —        |
| <b>General-purpose input port</b>        |     |   |                                    |          |
| P00-P03                                  | I   | General-purpose input port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.  | Primary                            | Positive |
| P10-P11                                  | I   | General-purpose input port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.  | Primary                            | Positive |
| <b>General-purpose output port</b>       |     |   |                                    |          |
| P20-P22                                  | O   | General-purpose output port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.   | Primary                            | Positive |
| <b>General-purpose input/output port</b> |     |   |                                    |          |
| P30-P35                                  | I/O | General-purpose input/output port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.   | Primary                            | Positive |
| P40-P47                                  | I/O | General-purpose input/output port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.   | Primary                            | Positive |
| P50-P53                                  | I/O | General-purpose input/output port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.   | Primary                            | Positive |
| P60-P67                                  | I/O | General-purpose input/output port.<br>These pins are for the ML610Q418C, but are not provided in the ML610Q418.   | Primary                            | Positive |

| Pin name                            | I/O | Description  | Primary/<br>Secondary/<br>Tertiary | Logic                 |
|-------------------------------------|-----|--|------------------------------------|-----------------------|
| <b>UART</b>                         |     |  |                                    |                       |
| TXD0                                | O   | UART0 data output pin. This pin is used as the secondary function of the P43 pin.  | Secondary                          | Positive              |
| RXD0                                | I   | UART0 data input pin. This pin is used as the secondary function of the P42 or the primary function of the P02 pin.  | Primary/<br>Secondary              | Positive              |
| TXD1                                | O   | UART1 data output pin. This pin is used as the quaternary function of the P43 pin or the secondary function of the P53.  | Secondary/<br>Quaternary           | Positive              |
| RXD1                                | I   | UART1 data input pin. This pin is used as the primary and secondary function of the P52 or the primary function of the P03 pin.  | Primary/Se<br>condary              | Positive              |
| <b>I<sup>2</sup>C bus interface</b> |     |  |                                    |                       |
| SDA                                 | I/O | I <sup>2</sup> C data input/output pin. This pin is used as the secondary function of the P40 pin. This pin has an NMOS open drain output. When using this pin as a function of the I <sup>2</sup> C, externally connect a pull-up resistor.     | Secondary                          | Positive              |
| SCL                                 | O   | I <sup>2</sup> C clock output pin. This pin is used as the secondary function of the P41 pin. This pin has an NMOS open drain output. When using this pin as a function of the I <sup>2</sup> C, externally connect a pull-up resistor.          | Secondary                          | Positive              |
| <b>Synchronous serial (SSIO)</b>    |     |  |                                    |                       |
| SCK0                                | I/O | Synchronous serial clock input/output pin. This pin is used as the tertiary function of the P41 or P45 pin.  | Tertiary                           | —                     |
| SIN0                                | I   | Synchronous serial data input pin. This pin is used as the tertiary function of the P40 or P44 pin.  | Tertiary                           | Positive              |
| SOUT0                               | O   | Synchronous serial data output pin. This pin is used as the tertiary function of the P42 or P46 pin.   | Tertiary                           | Positive              |
| SCK1                                | I/O | Synchronous serial clock input/output pin. This pin is used as the tertiary function of the P51 pin.   | Tertiary                           | —                     |
| SIN1                                | I   | Synchronous serial data input pin. This pin is used as the tertiary function of the P50 pin.   | Tertiary                           | Positive              |
| SOUT1                               | O   | Synchronous serial data output pin. This pin is used as the tertiary function of the P52 pin.  | Tertiary                           | Positive              |
| <b>PWM</b>                          |     |  |                                    |                       |
| PWM0                                | O   | PWM0 output pin. This pin is used as the tertiary function of the P43 or P34 pin.  | Tertiary                           | Positive              |
| T0P0CK                              | I   | PWM0 external clock input pin. This pin is used as the primary function of the P44 pin.  | Primary                            | —                     |
| <b>External interrupt</b>           |     |  |                                    |                       |
| EXI0-3                              | I   | External maskable interrupt input pins. Interrupt enable and edge selection can be performed for each bit by software. These pins are used as the primary functions of the P00-P03 pins.   | Primary                            | Positive/<br>negative |
| EXI8                                | I   | External maskable interrupt input pins. Interrupt enable and edge selection can be performed for each bit by software. These pins are used as the primary functions of the P50-P53 pins.   | Primary                            | Positive/<br>negative |
| <b>Capture</b>                      |     |  |                                    |                       |
| CAP0                                | I   | Capture trigger input pins. The value of the time base counter is captured in the register synchronously with the interrupt edge selected by software.<br>These pins are used as the primary functions of the P00 pin (CAP0) and P01 pin (CAP1). | Primary                            | —                     |
| CAP1                                | I   |  | Primary                            | —                     |
| <b>Timer</b>                        |     |  |                                    |                       |
| T02P0CK                             | I   | External clock input pin used for Timer 0. This pin is used as the primary function of the P44 pin.  | Primary                            | —                     |
| T13CK                               | I   | External clock input pin used for Timer 1. This pin is used as the primary function of the P45 pin.  | Primary                            | —                     |
| <b>Melody</b>                       |     |  |                                    |                       |
| MD0                                 | O   | Melody/buzzer signal output pin. This pin is used as the secondary function of the P22 pin.  | Secondary                          | Positive/<br>negative |
| <b>LED drive</b>                    |     |  |                                    |                       |
| LED0-2                              | O   | Nch open drain output pins to drive LED.   | Primary                            | Positive/<br>negative |

| Pin name   | I/O | Description  | Primary/<br>Secondary/<br>Tertiary | Logic |
|--|-----|--|------------------------------------|-------|
| <b>RC oscillation type A/D converter</b>           |     |  |                                    |       |
| IN0  | I   | Channel 0 oscillation input pin. This pin is used as the secondary function of the P30 pin.  | Secondary                          | —     |
| CS0  | O   | Channel 0 reference capacitor connection pin. This pin is used as the secondary function of the P31 pin.   | Secondary                          | —     |
| RS0  | O   | This pin is used as the secondary function of the P32 pin which is the reference resistor connection pin of Channel 0.   | Secondary                          | —     |
| RT0  | O   | Resistor sensor connection pin of Channel 0 for measurement. This pin is used as the secondary function of the P34 pin.  | Secondary                          | —     |
| CRT0   | O   | Resistor/capacitor sensor connection pin of Channel 0 for measurement. This pin is used as the secondary function of the P33 pin.  | Secondary                          | —     |
| RCM  | O   | RC oscillation monitor pin. This pin is used as the secondary function of the P35 pin.   | Secondary                          | —     |
| IN1  | I   | Oscillation input pin of Channel 1. This pin is used as the secondary function of the P44 pin.   | Secondary                          | —     |
| CS1  | O   | Reference capacitor connection pin of Channel 1. This pin is used as the secondary function of the P45 pin.  | Secondary                          | —     |
| RS1  | O   | Reference resistor connection pin of Channel 1. This pin is used as the secondary function of the P46 pin.   | Secondary                          | —     |
| RT1  | O   | Resistor sensor connection pin for measurement of Channel 1. This pin is used as the secondary function of the P47 pin.  | Secondary                          | —     |
| <b>Successive approximation type A/D converter</b> |     |  |                                    |       |
| AV <sub>SS</sub>                                   | —   | Negative power supply pin for successive approximation type A/D converter.   | —                                  | —     |
| AV <sub>DD</sub>                                   | —   | Positive power supply pin for successive approximation type A/D converter.   | —                                  | —     |
| V <sub>REF</sub>                                   | —   | Reference power supply pin for successive approximation type A/D converter.  | —                                  | —     |
| AIN0   | I   | Channel 0 analog input for successive approximation type A/D converter.  | —                                  | —     |
| AIN1   | I   | Channel 1 analog input for successive approximation type A/D converter.  | —                                  | —     |
| AIN2   | I   | Channel 2 analog input for successive approximation type A/D converter.  | —                                  | —     |
| AIN3   | I   | Channel 3 analog input for successive approximation type A/D converter.  | —                                  | —     |
| <b>LCD drive signal</b>                            |     |  |                                    |       |
| COM0-3   | O   | Common output pins.  | —                                  | —     |
| SEG0-39  | O   | Segment output pins.   | —                                  | —     |
| SEG40-47   | O   | Segment output pins.<br>These pins are for the ML610Q418, but are not provided in the ML610Q418C.  | —                                  | —     |
| <b>LCD driver power supply</b>                     |     |  |                                    |       |
| V <sub>L1</sub>                                    | —   | Power supply pins for LCD bias (internally generated). Capacitors Ca, Cb, and Cc (see measuring circuit 1) are connected between V <sub>SS</sub> and V <sub>L1</sub> , V <sub>L2</sub> , and V <sub>L3</sub> respectively. | —                                  | —     |
| V <sub>L2</sub>                                    | —   |  | —                                  | —     |
| V <sub>L3</sub>                                    | —   |  | —                                  | —     |
| C1   | —   | Power supply pins for LCD bias (internally generated). Capacitor C12 is connected between C1 and C2.   | —                                  | —     |
| C2   | —   |  | —                                  | —     |
| <b>For testing</b>                                 |     |  |                                    |       |
| TEST0  | I/O | Input/output pin for testing. A pull-down resistor is internally connected.  | —                                  | —     |
| TEST1_N  | I   | Input/output pin for testing. A pull-up resistor is internally connected.  | —                                  | —     |
| <b>Power supply</b>                                |     |  |                                    |       |
| V <sub>SS</sub>                                    | —   | Negative power supply pin.   | —                                  | —     |
| V <sub>DD</sub>                                    | —   | Positive power supply pin.   | —                                  | —     |
| V <sub>DDL</sub>                                   | —   | Positive power supply pin (internally generated) for internal logic. Capacitors CL0 and CL1 (see measuring circuit 1) are connected between this pin and V <sub>SS</sub> .   | —                                  | —     |

## TERMINATION OF UNUSED PINS

Table 3 shows methods of terminating the unused pins.

**Table 3 Termination of Unused Pins**

| Pin   | Recommended pin termination        |
|---|------------------------------------|
| AV <sub>DD</sub>                                    | V <sub>SS</sub>                    |
| AV <sub>SS</sub>                                    | V <sub>SS</sub>                    |
| V <sub>REF</sub>                                    | V <sub>SS</sub>                    |
| AIN0, AIN1, AIN2, AIN3                              | Open                               |
| V <sub>L1</sub> , V <sub>L2</sub> , V <sub>L3</sub> | Open                               |
| C1, C2  | Open                               |

### Note:

It is recommended to set the unused input ports and input/output ports to the inputs with pull-down resistors/pull-up resistors or the output mode since the supply current may become excessively large if the pins are left open in the high impedance input setting.

( x = 1, 2, 3 )

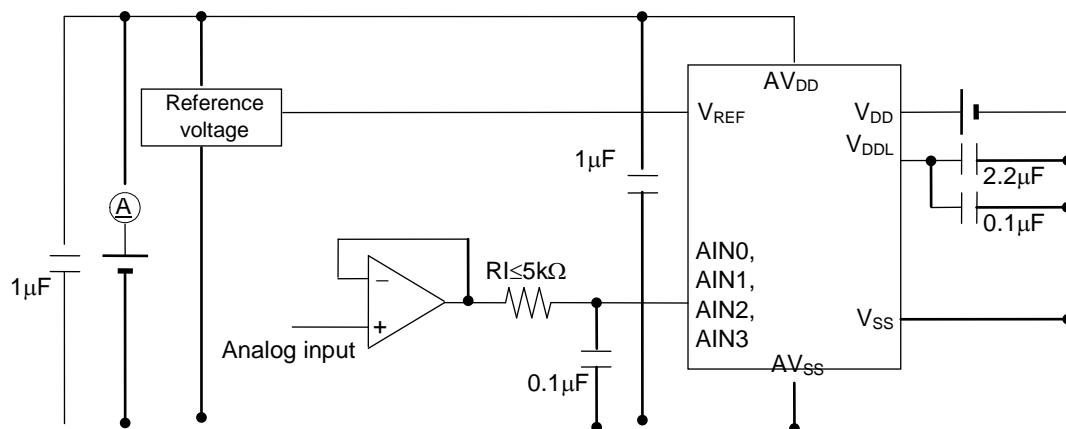

#### Note:

- Please have the shortest layout for the common node (wiring patterns which are connected to the external capacitors, resistors and IN0/IN1 pin), including CVR0/CVR1. Especially, do not have long wire between IN0/IN1 and RS0/RS1. The coupling capacitance on the wires may occur incorrect A/D conversion. Also, please do not have signals which may be a source of noise around the node.
- When RT0/RT1 (Thermistor and etc.) requires long wiring due to the restricted placement, please have VSS(GND) trace next to the signal.
- Please make wiring to components (capacitor, resistor and etc.) necessary for objective measurement. Wiring to reserved components may affect to the A/D conversion operation by noise the components itself may have.

## PACKAGE DIMENSIONS

(Unit: mm)

## Notes for Mounting the Surface Mount Type Package

The surface mount type packages are very susceptible to heat in reflow mounting and humidity absorbed in storage. Therefore, before you perform reflow mounting, contact a ROHM sales office for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).

Notes

- 1) The information contained herein is subject to change without notice.
- 2) Although LAPIS Semiconductor is continuously working to improve product reliability and quality, semiconductors can break down and malfunction due to various factors. Therefore, in order to prevent personal injury or fire arising from failure, please take safety measures such as complying with the derating characteristics, implementing redundant and fire prevention designs, and utilizing backups and fail-safe procedures. LAPIS Semiconductor shall have no responsibility for any damages arising out of the use of our Products beyond the rating specified by LAPIS Semiconductor.
- 3) Examples of application circuits, circuit constants and any other information contained herein are provided only to illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.
- 4) The technical information specified herein is intended only to show the typical functions of the Products and examples of application circuits for the Products. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of LAPIS Semiconductor or any third party with respect to the information contained in this document; therefore LAPIS Semiconductor shall have no responsibility whatsoever for any dispute, concerning such rights owned by third parties, arising out of the use of such technical information.
- 5) The Products are intended for use in general electronic equipment (i.e. AV/OA devices, communication, consumer systems, gaming/entertainment sets) as well as the applications indicated in this document.
- 6) The Products specified in this document are not designed to be radiation tolerant.
- 7) For use of our Products in applications requiring a high degree of reliability (as exemplified below), please contact and consult with a LAPIS Semiconductor representative: transportation equipment (i.e. cars, ships, trains), primary communication equipment, traffic lights, fire/crime prevention, safety equipment, medical systems, servers, solar cells, and power transmission systems.
- 8) Do not use our Products in applications requiring extremely high reliability, such as aerospace equipment, nuclear power control systems, and submarine repeaters.
- 9) LAPIS Semiconductor shall have no responsibility for any damages or injury arising from non-compliance with the recommended usage conditions and specifications contained herein.
- 10) LAPIS Semiconductor has used reasonable care to ensure the accuracy of the information contained in this document. However, LAPIS Semiconductor does not warrant that such information is error-free and LAPIS Semiconductor shall have no responsibility for any damages arising from any inaccuracy or misprint of such information.
- 11) Please use the Products in accordance with any applicable environmental laws and regulations, such as the RoHS Directive. For more details, including RoHS compatibility, please contact a ROHM sales office. LAPIS Semiconductor shall have no responsibility for any damages or losses resulting from non-compliance with any applicable laws or regulations.
- 12) When providing our Products and technologies contained in this document to other countries, you must abide by the procedures and provisions stipulated in all applicable export laws and regulations, including without limitation the US Export Administration Regulations and the Foreign Exchange and Foreign Trade Act.
- 13) This document, in part or in whole, may not be reprinted or reproduced without prior consent of LAPIS Semiconductor.
