MM454/MM554 four-channel commutator

general description

The MM454/MM554 is a four-channel analog commutator capable of switching four analog input channels sequentially onto an output line. The device is constructed on a single silicon chip using MOS P Channel enhancement transistors; it contains all the digital circuitry necessary to sequentially turn ON the four analog switch transistors permitting multiplexing of the analog input data. The device features:

- High Analog Voltage Handling ±10V
- High Commutating Rate 500 kHz
- Low Leakage Current (T_A = 25°C) 200 pA
  (T_A = 85°C) 50 nA
- All Channel Blanking input provided
- Reset capability provided
- Low ON Resistance 200Ω

In addition, the MM454/MM554 can easily be applied where submultiplexing is required since a 4:1 clock countdown signal is provided which can drive the clock input of subsequent MM454/MM554 units.

The MM454 is specified for operation over the −55°C to +125°C military temperature range. The MM554 is specified for operation over the −25°C to +70°C temperature range.

Note 1: Maximum ratings are limiting values above which the device may be damaged. All voltages referenced to V_{DD} = 0.

Note 2: These specifications apply over the indicated operating temperature range for V_{GG} = −24V, V_{DD} = 0V, V_{SS} = +12V, V_{RESET} = +12V, V_{BLANK} = +12V ON resistance measured at 1 mA, OFF resistance and leakage measured with all analog inputs and output common. Capacitance measured at 1 MHz.

Note 3: Operating conditions in Note 2 apply. V_{SS} to V_{DD} (0V) voltage is applied to counting and gating circuits. V_{GG} is required only for analog switch biasing. All logic inputs are high resistance and are essentially capacitive.

Note 4: Logic input voltage must not be more positive than V_{SS}.
