

MPxx5004, 0 to 3.92 kPa, Differential and Gauge, Integrated Pressure Sensor

Freescale's MPxx5004 series piezoresistive transducer is a state-of-the-art monolithic silicon pressure sensor designed for a wide range of applications, but particularly those employing a microcontroller or microprocessor with A/D inputs. This sensor combines a highly sensitive implanted strain gauge with advanced micromachining techniques, thin-film metallization, and bipolar processing to provide an accurate, high level analog output signal that is proportional to the applied pressure.

Features

- 1.5% maximum error for 0 to 100 mm H₂O over +10 °C to +60 °C with autozero
- 2.5% maximum error for 100 to 400 mm H₂O over +10 °C to +60 °C with autozero
- 6.25% maximum error for 0 to 400 mm H₂O over 10 °C to +60 °C without autozero
- Temperature compensated over 10 °C to 60 °C
- Available in gauge surface mount (SMT) or through-hole (DIP) configurations
- Durable thermoplastic (PPS) package

Applications

- Washing machine water level
- Ideally suited for microprocessor or microcontroller-based systems
- Appliance liquid level and pressure measurement
- Respiratory equipment

Related Documentation

The MPXV5004G device features and operations are described in a variety of reference manuals, user guides, and application notes. To find the most-current versions of these documents:

1. Go to the Freescale homepage at:
<http://www.freescale.com/>
2. In the Keyword search box at the top of the page, enter the device number MPXV5004G.
3. In the Refine Your Result pane on the left, click on the Documentation link.

MPxx5004

1 General Description

1.1 Block diagram

Figure 1 shows a block diagram of the internal circuitry integrated on a pressure sensor chip.

Figure 1. Integrated pressure sensor schematic

1.2 Pinout

Figure 2. Device pinout (top view)

Table 1. Pin functions

Pin	Name	Function
1	DNC	Do not connect to external circuitry or ground. Pin 1 is notated by the notch in the lead or chamfered corner.
2	V_S	Voltage supply
3	GND	Ground
4	V_{OUT}	Output voltage
5	DNC	Do not connect to external circuitry or ground.
6	DNC	Do not connect to external circuitry or ground.
7	DNC	Do not connect to external circuitry or ground.
8	DNC	Do not connect to external circuitry or ground.

2 Mechanical and Electrical Specifications

2.1 Maximum ratings

Table 2. Maximum ratings⁽¹⁾

Rating	Symbol	Value	Unit
Maximum pressure (P1 > P2)	P _{MAX}	16	kPa
Storage temperature	T _{STG}	-30 to +100	°C
Operating temperature	T _A	0 to +85	°C

1. Exposure beyond the specified limits may cause permanent damage or degradation to the device.

2.2 Operating characteristics

Table 3. Operating characteristics (V_S = 5.0 V_{DC}, T_A = 25 °C unless otherwise noted, P1 > P2)

Characteristic	Symbol	Min	Typ	Max	Units	
Pressure range	P _{OP}	0	—	3.92 400	kPa mm H ₂ O	
Supply voltage ⁽¹⁾	V _S	4.75	5.0	5.25	V _{DC}	
Supply current	I _S	—	—	10	mAdc	
Span @ 306 mm H ₂ O (3 kPa) ⁽²⁾ Full-scale span @ 400 mm H ₂ O (3.92 kPa) ⁽²⁾	V _{FSS}	— —	3.0 3.92	— —	V	
Offset ⁽³⁾	V _{OFF}	0.75	1.0	1.25	V	
Sensitivity	V/P	—	1.0	—	V/kPa	
Accuracy ⁽⁴⁾ ⁽⁵⁾	0 to 100 mm H ₂ O (10 °C to 60 °C)	—	—	—	±1.5	%V _{FSS} with autozero
	100 to 400 mm H ₂ O (10 °C to 60 °C)	—	—	—	±2.5	%V _{FSS} with autozero
	0 to 400 mm H ₂ O (10 °C to 60 °C)	—	—	—	±6.25	%V _{FSS} without autozero

- Device is ratiometric within this specified excitation range.
- Span is defined as the algebraic difference between the output voltage at specified pressure and the output voltage at the minimum rated pressure.
- Offset (V_{off}) is defined as the output voltage at the minimum rated pressure.
- Accuracy (error budget) consists of the following:
 - Linearity: Output deviation from a straight line relationship with pressure, using endpoint method, over the specified pressure range.
 - Temperature hysteresis: Output deviation at any temperature within the operating temperature range, after the temperature is cycled to and from the minimum or maximum operating temperature points, with zero differential pressure applied.
 - Pressure hysteresis: Output deviation at any pressure within the specified range, when this pressure is cycled to and from the minimum or maximum rated pressure, at 25 °C.
 - TcSpan: Output deviation over the temperature range of 10 °C to 60 °C, relative to 25 °C.
 - TcOffset: Output deviation with minimum rated pressure applied, over the temperature range of 10 °C to 60 °C, relative to 25 °C.
 - Variation from nominal: The variation from nominal values, for offset or full-scale span, as a percent of V_{FSS}, at 25 °C.
- Autozero at factory installation: Due to the sensitivity of the MPxx5004G, external mechanical stresses and mounting position can affect the zero pressure output reading. Autozeroing is defined as storing the zero pressure output reading and subtracting this from the device's output during normal operations. Reference AN1636 for specific information. The specified accuracy assumes a maximum temperature change of ±5 °C between autozero and measurement.

3 On-chip Temperature Compensation and Calibration

The performance over temperature is achieved by integrating the shear-stress strain gauge, temperature compensation, calibration and signal conditioning circuitry onto a single monolithic chip.

Figure 3 illustrates the gauge configuration in the basic chip carrier (case 98ASB17756C). A fluorosilicone gel isolates the die surface and wire bonds from the environment, while allowing the pressure signal to be transmitted to the silicon diaphragm.

The MPxx5004 series sensor operating characteristics are based on use of dry air as pressure media. Media, other than dry air, may have adverse effects on sensor performance and long-term reliability. Internal reliability and qualification test for dry air, and other media, are available from the factory. Contact the factory for information regarding media tolerance in your application.

Figure 4 shows the recommended decoupling circuit for interfacing the output of the MPxx5004 to the A/D input of the microprocessor or microcontroller. Proper decoupling of the power supply is recommended.

Typical, minimum and maximum output curves are shown for operation over a temperature range of 10 °C to 60 °C using the decoupling circuit shown in Figure 4. The output will saturate outside of the specified pressure range.

Figure 3. Cross-sectional diagram (not to scale)

Figure 4. Recommended power supply decoupling and output filtering
(For additional output filtering, please refer to AN1646.)

Figure 5. Output vs. pressure differential at $\pm 6.25\% V_{FSS}$ (without autozero, Table 3, note 5)

Figure 6. Output vs. pressure differential at $\pm 2.5\% V_{FSS}$ (with autozero, Table 3, note 5)

4 Package Information

4.1 Pressure (P1)/Vacuum (P2) side identification

Freescale Semiconductor designates the two sides of the pressure sensor as the Pressure (P1) side and the Vacuum (P2) side. The pressure (P1) side is the side containing silicone gel which isolates the die from the environment.

The Freescale Semiconductor pressure sensor is designed to operate with positive differential pressure applied, $P1 > P2$.

The pressure (P1) side may be identified by using the table below.

Table 4. Pressure (P1)/Vacuum (P2) side identification table

Part number	Case number	Pressure (P1) side identifier
MPXV5004DP	98ASA99255D	Side with part marking
MPXV5004GC6U/6T1, MPVZ5004GC6U	98ASB17757C	Side with port attached
MPXV5004GC7U	98ASB17759C	Side with port attached
MPXV5004GP/GPT1	98ASA99303D	Side with port attached
MPXV5004GVP	98ASA99302D	Stainless steel cap
MPVZ5004G6U/6T1	98ASB17756C	Stainless steel cap
MPVZ5004G7U	98ASB17758C	Stainless steel cap
MPVZ5004GW6U	98ASA10686D	Vertical port attached
MPVZ5004GW7U	98ASA10611D	Vertical port attached

4.2 Minimum recommended footprint for surface mounted applications

Surface mount board layout is a critical portion of the total design. The footprint for the surface mount packages must be the correct size to ensure proper solder connection interface between the board and the package. With the correct footprint, the packages will self align when subjected to a solder reflow process. It is always recommended to design boards with a solder mask layer to avoid bridging and shorting between solder pads.

Figure 7. SOP footprint (case 98ASB17756C)

4.3 Package Dimensions
