# 1N3491 thru 1N3495 (SILICON)

(MR322 thru MR328) MR330, MR331

Medium-current silicon rectifiers - compact, highly efficient silicon rectifiers for medium-current applications.

#### THERMAL CHARACTERISTICS

Characteristic	Symbol	Max	Unit
Thermal Resistance, Junction to Case	<sup>в</sup> JС	1.2	OC/Watt

## MECHANICAL CHARACTERISTICS

**CASE**: Welded, hermetically sealed construction.

FINISH: All external surfaces corrosion-resistant and the terminal lead is readily

solderable.

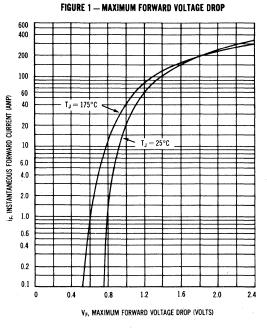

POLARITY: CATHODE TO CASE (reverse polarity units are available upon request and are designated by an "R" suffix i.e. MR327R or 1N3491R).

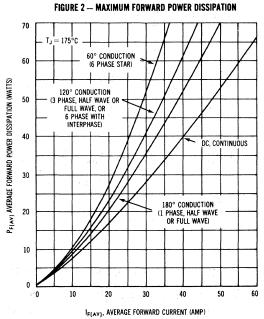

MOUNTING POSITIONS: Any.

#### MOUNTING PROCEDURES

MR322-MR331 and 1N3491-1N3495 rectifiers are designed to be press-fitted in a heat sink in order to attain full device ratings. Recommended procedures for this type of mounting are as follows:

1. Drill a hole in the heat sink 0.499 ± .001 inch in diameter.

2. Break the hole edge as shown to prevent shearing off the knurled edge of the rectifier when it is pressed into the hole.

3. The depth and width of the break should be 0.010 inch maximum to retain maximum heat sink

- surface contact.
- surface contact.

  4. To prevent damage to the rectifier during press-in, the pressing force should be applied only on the shoulder ring of the rectifier case as shown in the figure.

  5. The pressing force should be applied evenly about the shoulder ring to avoid tilting or canting of the rectifier case in the hole during the press-in operation. Also, the use of a light industrial lubricant will be of considerable aid.
