

Stereo Input available to Single-Ended/differential Mode *Low voltage, Volume Controller With Soft Step.* *Gain/Loss, Low power consumption.*

FEATURES

- Operation range: 2.5V~6.5V.
- One quasi-differential input.
- Soft step volume control : -79dB ~ +15dB.
- Input Gain: 0dB ~ +15dB.
- Low power consumption.
- Good PSRR and low pop noise.
- I²C interface.
- Housed in 10 pin MSOP package.

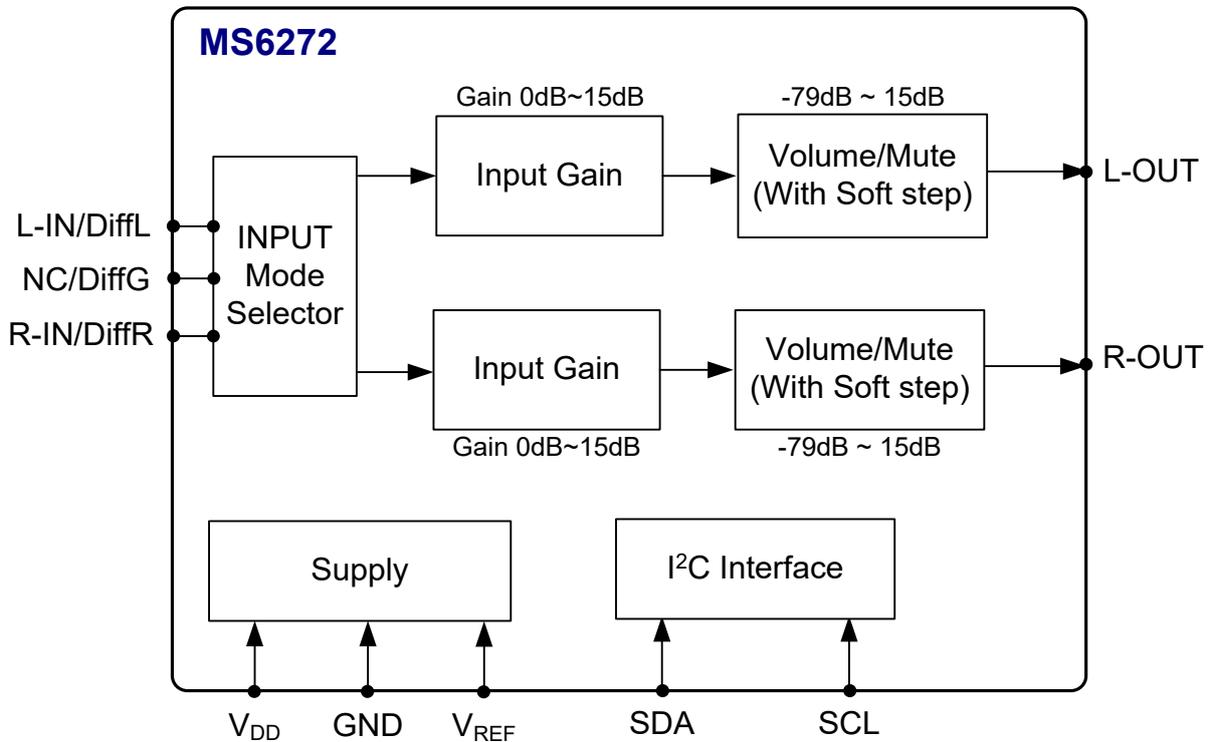

APPLICATIONS

- Multimedia system
- Hi-Fi audio system.
- Bluetooth.
- DAB

DESCRIPTION

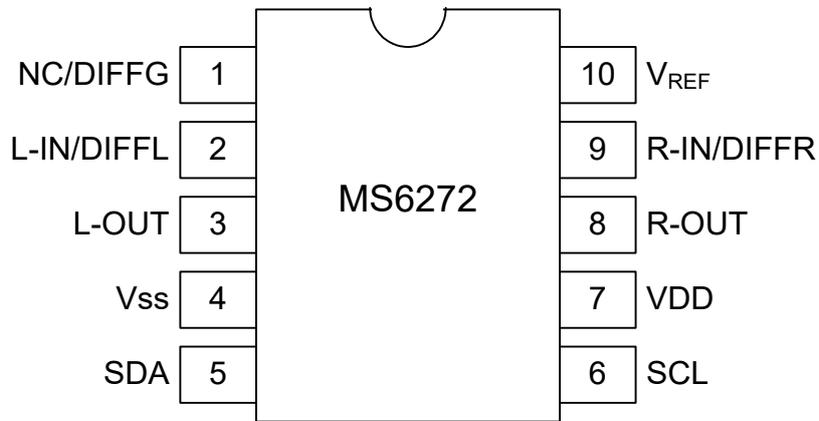

The MS6272 is a audio volume controller IC with stereo input(Single-ended/differential). It has input gain(0 ~ +15dB), Soft step volume control(-79dB ~ +15dB) with programmable blend times. It uses CMOS technology specially for the low voltage application with low noise, rail-to-rail output.

I²C BUS DESCRIPTION

Start and stop conditions

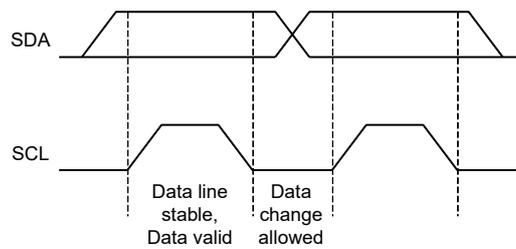

A start condition is activated when the SCL is set to HIGH and SDA shifts from HIGH to LOW state. The stop condition is activated when SCL is set to HIGH and SDA shifts from LOW to HIGH state. Please refer to the timing diagram below.

SCL : Serial Clock Line, SDA : Serial Data Line

Data validity

A data on the SDA line is considered valid and stable only when the SCL signal is in HIGH state. The HIGH and LOW states of the SDA line can only change when the SCL signal is LOW. Please refer to the figure below.

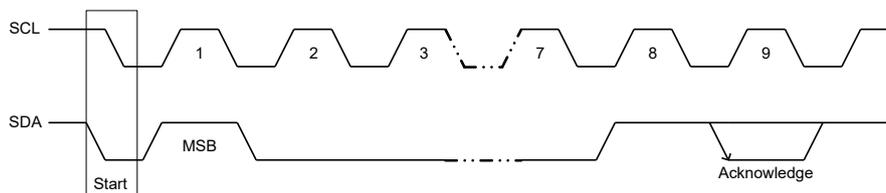

Byte format

Every byte transmitted to the SDA line consists of 8 bits. Each byte must be followed by an acknowledge bit. The MSB is transmitted first.

Acknowledge

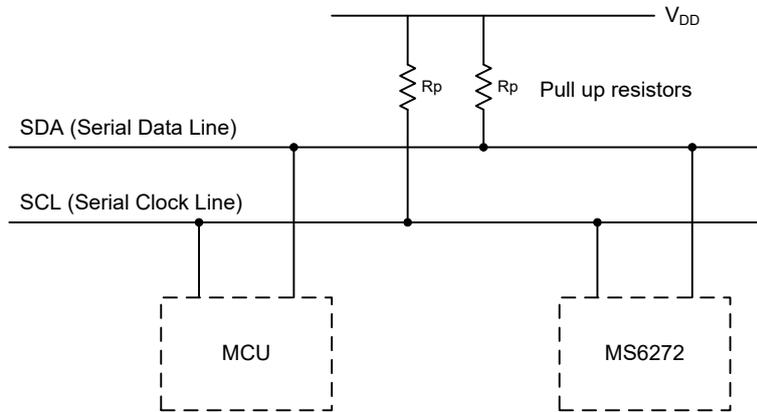

During the Acknowledge clock pulse, the master (up) put a resistive HIGH level on the SDA line. The peripheral (audio processor) that acknowledges has to pull-down (LOW) the SDA line during the Acknowledge clock pulse so that the SDA line is in a stable LOW state during this clock pulse. Please refer to the diagram below.

The audio processor that has been addressed has to generate an Acknowledge after receiving each byte, otherwise, the SDA line will remain at the HIGH level during the ninth (9th) clock pulse. In this case, the master transmitter can generate the STOP information in order to abort the transfer.

BUS INTERFACE

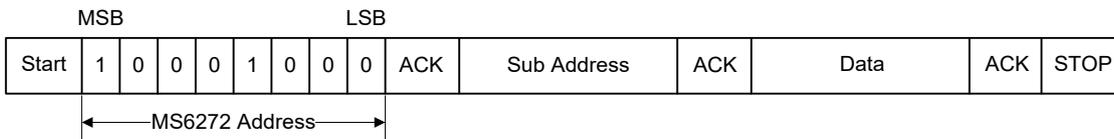

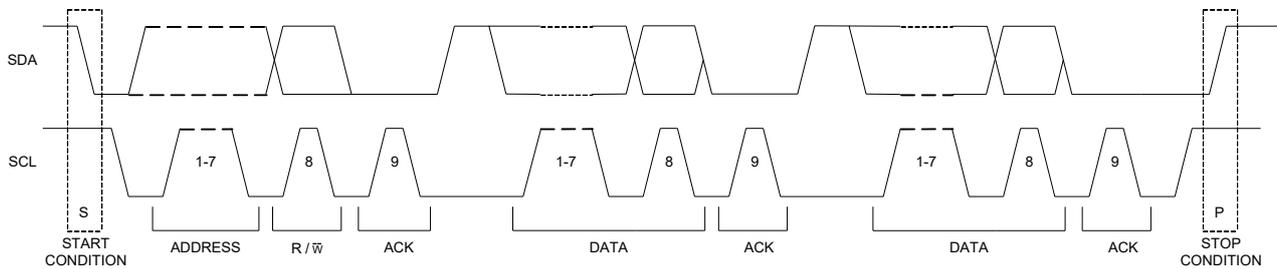

Data are transmitted to and from the MCU to the MS6272 via the SDA and SCL. The SDA and SCL make up the BUS interface. It should be noted that pull-up resistors must be connected to the positive supply voltage.

Interface protocol

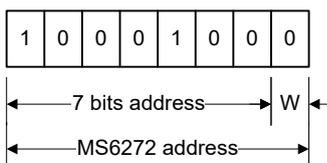

The format consists of the following

- A START condition
- A chip address byte including the MS6272 address. (7bits)
- The 8th bit of the byte must be "0".
- The MS6272 must always acknowledge the end of each transmitted byte.
- A data sequence (N-bytes + Acknowledge)
- A STOP condition

Chip Address

The chip address of the MS6272 is 88H.

Power management (07H)

MSB							LSB		Function
D7	D6	D5	D4	D3	D2	D1	D0		
							0	Release of V_{REF} to GND.	
							1	Set the voltage of V_{REF} to $1/2V_{DD}$	
					0	X		All devices Active	
					1	1		Power down	

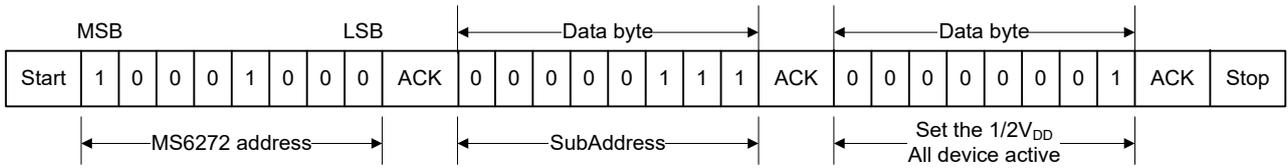

The initial condition is Power down , $V_{REF} = GND$.

Example

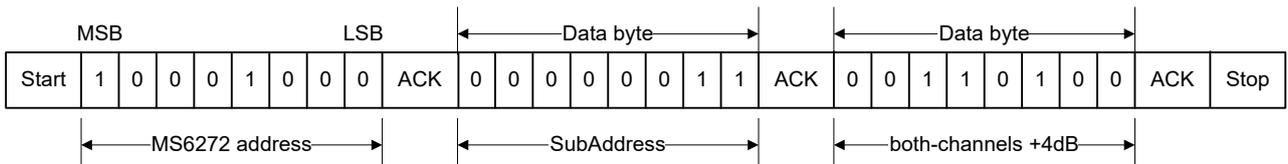

Soft-step Time 10.24ms , Soft-step ON , Single-ended Mode.

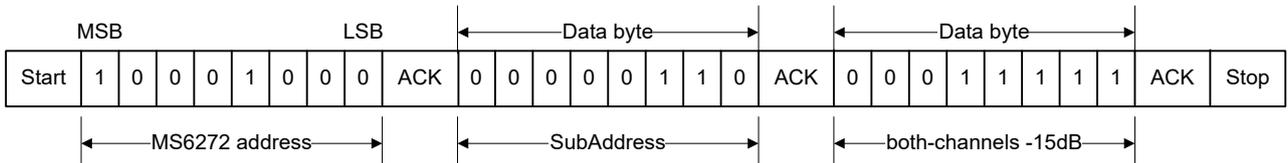

Set the $1/2V_{DD}$, All device active.

Set Input gain of both channels at +4dB.

Set Volume of both-channels at -15dB

Soft-step volume

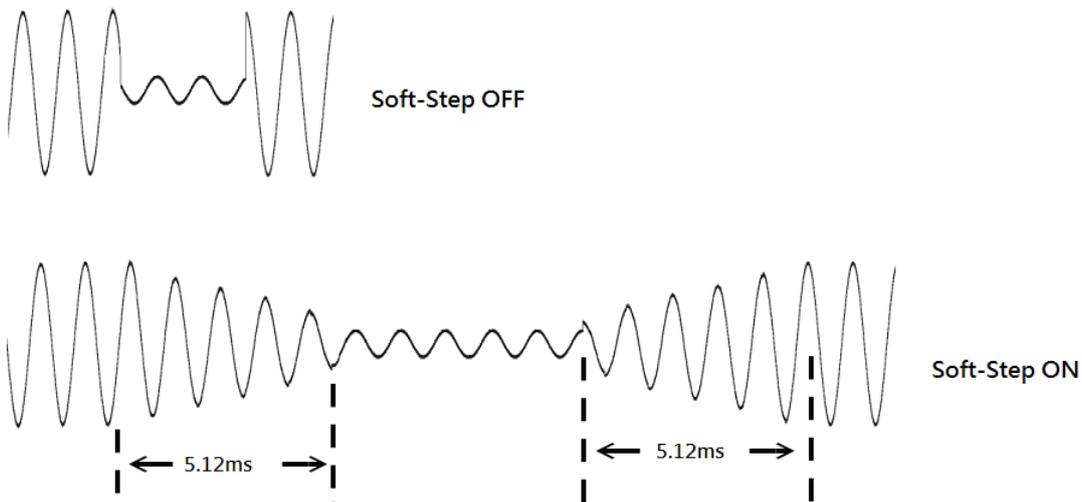

When the volume-level is changed audible clicks could appear at the output. The root cause of those clicks could be the sudden change of the envelope of the audio signal. With the Soft-step feature, this click could be reduced to a minimum. Soft-step supports N dB volume change, including mute.

Example

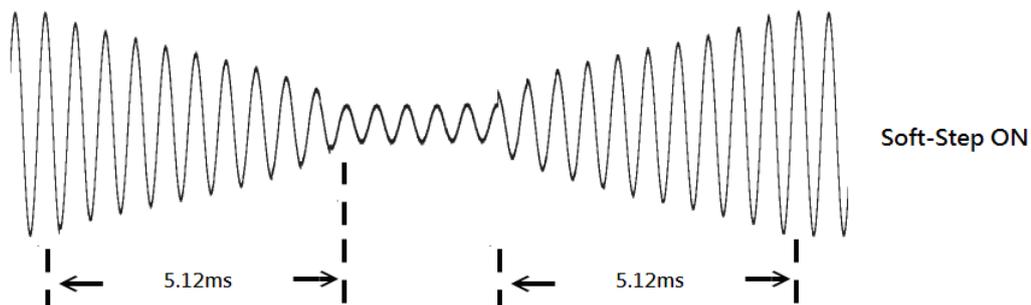

Soft-Step Time = 5.12ms

0dB → -16dB → 0dB

$V_{in} = 1V_{rms} @ 1KHz$

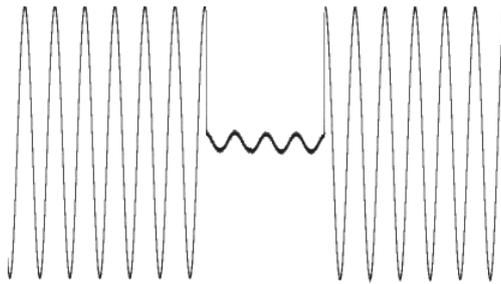

$V_{in} = 1V_{rms} @ 2KHz$

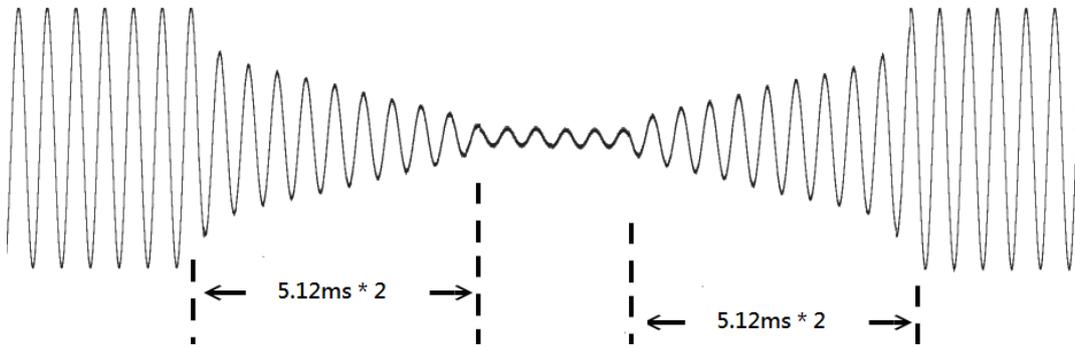

+8dB → -16dB → +8dB

$V_{in} = 0.5V_{rms} @ 1KHz$

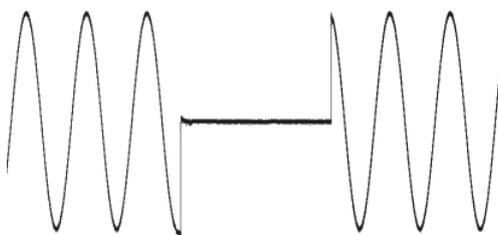

Soft-Step OFF

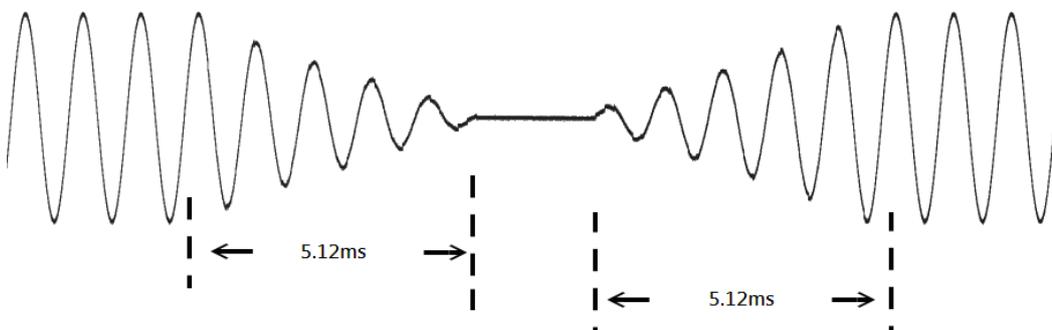

Soft-Step ON

0dB → Mute → 0dB

$V_{in} = 1V_{rms} @ 1KHz$

DEMO BOARD

The demo board used IR technique controller to control the MS6272. The default states of demo board are Input Gain 0dB, Volume 0dB, SE Mode, Softstep off, Mute off.

Label 1: Supply Voltage

The AVDD and DVDD should be the same supply voltage, the supply range is 2.5 ~ 6.5 VDC.

Label 2: LED Indicator

The LED indicates the power status and the IR received status. It is red-dark blink once when the MCU has received the function code correctly.

Label 3: MCU Reset

The MS6272 will be loaded the default values by MCU. The default states of demo board : Input Gain 0dB, Volume 0dB, Softstep off , SE Mode , mute-off.

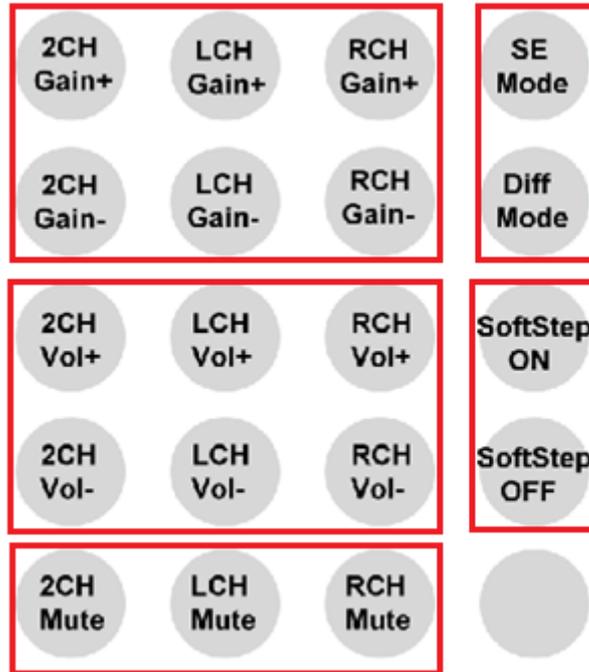

Label 4: Input Section

Please input stereo audio signal, as music or sine wave.

Label 5: Output Section

Please connected to a post-power-amplifier, as active speaker.

IR Controller

Gain+/- : The gain control keys.

The gain control in 1dB/step as the switch is pressed once, the range is 0dB to 15dB.

Vol+/- : The volume control keys.

The volume control in 1dB/step as the switch is pressed once, the range is -79dB to +15dB.

MUTE : The mute key controls all speaker outputs

Press the key once to set mute-on or mute-off.

SE/Diff Mode : The Input Mode control Keys.

SoftStep : The SoftStep key.

Press the key once to set Softstep on or SoftStep off.
